farm range. From fifty-five White Orpingtons and eighty-five Rhode Island Reds we have gathered 153 dozens of eggs since January 1st."

—"I have a nice flock of farm range Orpingtons," writes Fred Massure, Linden, Iowa, whose advertisement offering eggs for sale appears elsewhere in this department. "They are all vigorous and healthy, headed by cocks and cockerels weighing eight to ten pounds. I ship nothing but strictly fresh, good-shaped eggs and guarantee satisfaction."

—"I am pricing eggs very cheap, considering quality," writes Mrs. Minnie McConaughy, Martelle, Iowa, in furnishing copy for her Barred Plymouth Rock egg advertisement that appears elsewhere in this department. "I have two pullet and three cockerel mated pens and a utility flock from which I can supply eggs. Write for free egg circular."

—In furnishing copy for his egg advertisement appearing elsewhere in this department, J. H. Duncan, Lineville, Iowa, writes: "My Barred Plymouth Rocks are better than ever this year. I am adding new blood at long prices." Prices at which he will furnish eggs are stated in the advertisement appearing elsewhere in this department. Mr. Duncan is also a breeder of Poland China swine.

—Mrs. J. E. Baxter, Walnut Grove, Minn., whose advertisement appears elsewhere in this department, and who is engaged extensively in breeding White Holland turkeys, writes: "I have enjoyed a splendid trade in turkeys. My hens are all sold. Have a few extra choice young toms weighing up to twenty-five pounds each. They are strikingly handsome birds with immense bone and pure white plumage, entirely free from black flecks."

—"Our Barred Plymouth Rock hens and pullets are beauties, surface color clear and snappy, giving that ringy appearance which marks them winners; barring narrow, even and distinct to the skin," writes Mason C. Ogg, Monroe, Iowa, in furnishing copy for his advertisement found elsewhere in this department. "Our range flock has been carefully culled, many of the pullets being good enough for fancy pens, and the males are all good stock. We guarantee eggs to be as described and strongly fertile."

—C. O. Lowrey, Edgar, Neb., remitting for advertising already done, writes: "Our Barred Plymouth Rocks are No. 1. We have raised them for fifteen years. At state and county shows we have always won a liberal share of the best premiums. At the Big Four show, held at Edgar this season, we won first and third on cockerel; first, third and fourth on hen; second and third on cock, and first on pen in a strong class. Inquiries for stock and eggs are coming in every mail." See advertisement elsewhere in this department.

—J. A. Holmes, Steamboat Rock, Ia., breeder of Single Comb Rhode Island Reds, in furnishing copy for advertisement appearing elsewhere in this department, writes: "I have been breeding Reds for several years and have made a careful study of same. My flock now have vigor, color, type and laying qualities that are hard to beat. My flock has had green feed all winter, and I guarantee ten chicks from each sitting or will duplicate the order from same pen at half price. Last year I did not receive a single complaint from any of my customers."

—Lee O. Wolfe, Titonka, Iowa, in furnishing copy for his advertisement appearing elsewhere in this department, writes: "The eggs I advertise in your paper are from Iowa State Show winners at Des Moines in January. I took every premium offered. My English Red Caps are imported birds direct from prize winners. I have only imported birds and will sell eggs during the months of April, May and June. My birds weigh from five to seven and one-half pounds. Young cockerels have combs three inches broad. Birds from this stock will win anywhere."

—Readers of this paper wishing Barred Plymouth Rock eggs from big-boned, prize-winning stock should look up the advertisement of S. V. Latcham, Woodward, Iowa, that appears elsewhere in this issue. Mr. Latcham has been advertising with us a number of years and writes that he has shipped eggs into all parts of the United States giving the greatest satisfaction. He states that his yards of Barred Plymouth Rocks are composed of the most popular strains in America, and are the best he has ever owned. He adds: "I breed for size as well as good barring and great egg-producing qualities. They are the kind that lay. My males weigh up to twelve pounds. My egg customers are not disappointed when chicks are grown. Prices on eggs, $1 per fifteen, thirty for $1.75, $5 per 100. I guarantee a fair hatch and safe delivery. Write me for free catalog."

—M. V. Leeper, Redfield, Iowa, elsewhere in this department is offering Barred Plymouth Rock and Bronze turkey eggs for sale. In furnishing copy he writes: "My pens in Barred Rocks this season are headed by nine and one-half and ten and one-half-pound cockerels, dark or cockerel bred color. One has a two and three-fourths-inch leg bone, the other two and one-half-inch leg bone. Mated to the ten and one-half-pound bird are thirteen yearling hens, averaging nine pounds each, and the nine and one-half-pound cockerel has thirteen pullets. I not only expect these matings to produce heavy-weight birds, but show birds as well. My farm range flock is headed by nine and twelve-pound cockerels. My flock of Bronze turkeys is headed by a forty-pound yearling tom; hens in this flock weigh up to twenty-five pounds and pullets up to eighteen."

BOVEE FURNACES
AT
MANUFACTURERS' PRICES

THE BOVEE FURNACE HAS DOUBLE THE HEATING CAPACITY of OTHER FURNACES for AMOUNT of FUEL CONSUMED. They are made very heavy, of the best of material.

Measure the fire pots and combustion chamber and then note the long travel of heat through the compound radiator before reaching the chimney. Compare these measurements with those of all other first-class furnaces, and you will see WHY the Bovee Furnaces require so little fuel and last longer.

Send plans for our special winter prices. We save you about one-half on the price of a first-class heating plant.

BOVEE FURNACE WORKS, 200 8th St. Waterloo, Iowa

TELLS WHY CHICKS DIE

J. C. REEFER, the poultry expert of 1630 A Main St., Kansas City, Missouri, is giving away free a valuable book entitled "White Diarrhoea and How to Cure It." This wonderful book contains some new scientific facts on white diarrhoea and tells how to prepare a simple home solution that cures this terrible disease over night and actually raises 98% of each hatch. Everyone interested in poultry should certainly write Mr. Reefer for one of these valuable FREE books.

Save Your Chicks

WE can help you. Send us names and addresses of ten (10) poultry friends and receive our revised 32-page book on "White Diarrhoea, the Greatest Foe to Chick Life." This book makes poultry profits possible; gives care and feeding of chicks and turkeys; also cause and guaranteed cure for bowel trouble. Above book FREE, postpaid, for the names. Write today. Address

DRAINAGE You can drain your land without digging a ditch. Write for circular at once
VERTICAL DRAINAGE CO., Clinton, Iowa

INDIAN RUNNER DUCKS.

Mrs. C. G. Wilson, of Page county, Iowa, desires information about duck culture. She writes:

I am thinking of buying a trio of fawn Indian Runner ducks. I have never had any experience raising ducks, but have been told that they are much easier raised than chickens. Please tell me how to care for the eggs during incubation. I think I will use hens instead of my incubator. Would also like to know the particulars about feeding the ducklings. How many eggs will I probably get from the two ducks during a season?

The Indian Runner is to ducks, what the Leghorn is to chickens—veritable little egg machines. The first concern of a prospective duck raiser is to get a start from a reliable breeder, and true to type. There is so much exaggeration in regard to Indian Runners as layers that the novice is apt to be disappointed. It is always thus with any new breed of poultry that is on the boom.

The housing of ducks is a very simple matter. Just a low shed, kept clean and dry and bedded with straw. Dampness causes rheumatism, more especially in the young stock which is about the only disease they ever contract. They are free from parasites and naturally very healthy. As they lay any place where they happen to be, they should be confined a while each morning. A small yard is advisable to confine them until they lay, when they may be turned on the range, though they are a nuisance when running at large in the chicken runs.

Through the laying season, which for Indian Runners rightly cared for, should extend from March to cold weather, they should be fed a mixture consisting of equal parts ground corn and wheat to which should be added one-tenth part beef scraps, this mixture to be dampened just enough so the particles will stick together. Besides this, they should have all the oyster shells they will eat, grit and green feed of some sort. If the mash is dampened with milk less meat will answer. It is very necessary that water in a vessel deep enough for them to dip their beaks above the nostrils is always available. These openings must be kept washed out. It is not necessary that they have water to swim in, though the eggs are more highly fertilized if the breeders have access to water at breeding time. It is the natural environment of ducks.

The first eggs the duck lays should be rejected for incubation. After the first few eggs, they run a very high per cent fertility. We have several times got 100 per cent hatch, something we never have got from chickens. Where large numbers of breeders are kept, artificial incubation is very satisfactory, but where only a few eggs are produced the hen is preferable. Ducks are abominable mothers, though very good sitters.

The eggs hatch in about twenty-eight days, pipping a day or two before escaping from the shell. The first feed for ducklings is made of equal parts of bran, corn meal and shorts to which is added 5 per cent beef scraps. It is moistened and fed, all they will eat, five times a day. From the first some green feed should be cut up fine and mixed with it, gradually increasing in quantity until half the bulk is green food. They should always have plenty of water to drink, but contrary to popular opinion they can stand very little water on the outside. They cannot stand the hot rays of the sun and shade is very essential. The ducklings, if kept dry, rightly fed and well cared for, rarely fail to thrive. After a couple of weeks they chase bugs—and get them too—from morning until night. At ten weeks they are practically grown.

"How many eggs will they lay?" You may be told as many or as few as you wish to hear about, from thirty eggs to 300 a year. A very conservative estimate would be 150 eggs, though whole flocks have produced an average of 200.

We have a short season of mud before us now that should teach the beauties of a feeding floor to those who have none. After that there is a whole long summer in which to build a "table" for the hogs to eat on.

The present high price of hogs will induce many pork raisers to part with their best brood sows and keep the smaller ones. This will put them in the class with the miser who killed the goose that laid the golden eggs. Those who keep the best and sell the rest are the ones who win out in the hog-raising game.

About the best hired man we ever had was one whose only fault was that he seemed to try to imitate all the sounds of a gasoline wood sawing outfit in his sleep. This fault, however, was no fault at all compared with some hired men who do not seem to need any sleep.

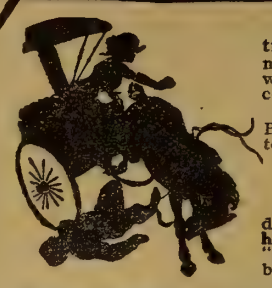
Send the Coupon for Prof. Beery's Grand HORSE-TRAINERS' Prospectus—FREE!



Prof. Jesse Beery won world-wide fame and was tremendously successful giving exhibitions of his marvelous skill in mastering man-killing stallions, training wild horses to drive without bridle or reins. The whole country was thrilled by his daring deeds.

In the grand Free "Horse-Trainers' Prospectus" Prof. Beery now reveals the secret of his power and shows the way to duplicate his dazzling success.

Be a Horse-Trainer!

If you are the owner of a vicious, tricky, kicking, balky, dangerous and unsaleable horse or colt, don't get rid of the **horse**—get rid of its **bad habits.** Write for Prof. Jesse Beery's "Horse-Trainers' Prospectus," a large, handsome, illustrated book written by the King of Horse-Tamers and Trainers.

$1,200.00 to $3,000.00 a Year
Training, Trading, Giving Exhibitions

The wonderful success of Prof. Beery's graduates—**taught by mail** at home during spare time—proves beyond question the value of his instruction. People gladly pay his graduates $15 to $25 a head to have horses tamed, trained, cured of bad habits, and colts broken to harness. Prof. Beery's Correspondence Course in Horse-Training and Colt-Breaking is the only instruction of the kind in the world. Thousands of his graduates are reaping the profits and benefits of his wonderful course. For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional horse-trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy a **home and an automobile** solely through earnings from training horses as taught by your excellent methods."

A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several different men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

S. M. Ryder, Mercersburg, Pa., writes: "I am making money buying 3-year-old kickers **cheap,** handling them for a few days and selling them, perfectly broken, at a large profit."

Send the FREE Coupon Today!

No matter who you are or where you live, if you love horses and are ambitious to earn more money in a profession you will be proud of, write for the wonderful Free "Horse-Trainers' Prospectus" today, without fail. Tell me all about your horse. (45)

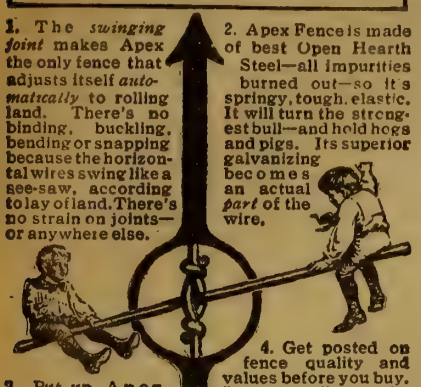
APEX FENCE
Fits Every Farm

1. The *swinging joint* makes Apex the only fence that adjusts itself *automatically* to rolling land. There's no binding, buckling, bending or snapping because the horizontal wires swing like a see-saw, according to lay of land. There's no strain on joints—or anywhere else.

2. Apex Fence is made of best Open Hearth Steel—all impurities burned out—so it's springy, tough, elastic. It will turn the strongest bull—and hold hogs and pigs. Its superior galvanizing becomes an actual *part* of the wire.



3. Put up Apex Fence once and it stays up for good. There's no big repair expense, no replacing. A cheap fence must be paid for twice or three times before you're through with it.

4. Get posted on fence quality and values before you buy. Let us mail you the Apex booklet, and our special offer. If we have no Apex dealer near you we will see that you are supplied promptly with Apex fence. Address

Country Roads of Concrete.

By P. H. Wilson.

NO SINGLE factor plays such an important part in the social and business life of a community as the quality of its roads. Aside from the pleasure and convenience of travel, possible at all times over permanent roads, there is the financial phase which directly concerns the cost not only of farm produce, but of city products as well. Consequently everybody wants good roads. In the matter of paying for permanent highways, a generally satisfactory agreement seems to have been reached in the proposed distribution of the cost between the nation, the state, the county and the users of the road in question. As a result, within a few years this country will take its rightful leading position among the nations of the world in the number of miles of permanent roads.

In a way it is fortunate that the United States has been rather slow in the matter of road making. The roads can now be built of lasting materials, such as will withstand the wear of motor traffic which is fast ruining Europe's century-old roadways. Lasting road materials are everywhere present in the form of sand and gravel from pits and stream beds and crushed rock from stone quarries. Combined with Portland cement into concrete, they form an inexpensive and permanent road surface which successfully resists the usually destructive action of automobiles.

The first consideration in the building of concrete roads is a careful study of local deposits of sand, gravel and rock (called the aggregate) to see whether they are suitable for concrete. Sand must be clean and hard and must grade uniformly in size of grain from one-fourth inch down. The same applies to gravel and crushed rock except that the largest particles commonly allowable are one and one-fourth inches in diameter. If local materials are usable, a considerable saving will be affected, as only cement will need be freighted.

It is much faster and cheaper to mix the concrete with a machine than by hand. Depending on the grading of the aggregate, the concrete is usually proportioned one bag of Portland cement to two cubic feet of sand and four cubic of screened gravel or crushed rock, or one of cement to two of sand and three of gravel or rock. During the grading and draining of the road, the aggregate is hauled and piled at convenient points. The concrete is mixed mushy wet, is deposited to the thickness of six inches upon the firm old road bed and is brought to grade and shape by means of a templet. In order to shed the water on the side drains the surface of the concrete is given a rise or crown in the center of one one-hundredth to one seventy-fifth the width of the roadway. The surface is finished with a wooden float and wire broom, by which means there is afforded perfect footing for horses. At intervals of twenty-five feet the road is divided into sections by narrow contraction joints extending crosswise the road and entirely through the concrete. These joints are formed by means of a thin metal or wooden cross form or divider to which is tied a single or double thickness of tar paper with the paper face against the last laid section of roadway. After the surface of this section is finished and while the concrete for the adjoining section is being placed, the cord holding the paper to the cross form is cut and the cross form is removed. The tar paper adheres to the concrete and stays in the joint, which is reduced to the thickness of the paper by forcing against it the freshly placed concrete of the section under construction.

When the surface of the concrete has hardened enough to prevent pitting it is sprinkled with clean water and is kept moist for several days. Likewise, as soon as possible, the pavement is covered temporarily with two inches of sand or dirt from the side road to give further aid in curing the concrete. Traffic is confined to the earthen side roads until the concrete is about two weeks old. In the meantime shoulders of broken stone or gravel are built along both edges of the pavement. These are made three feet wide and sufficiently thick to be firm and to make it an easy matter at all times for wagon wheels to pass from the side road onto the pavement.

There are two phases of the cost of any improvement—first cost and upkeep expense. In both items the concrete road has proven less expensive than any other kind of permanent roadway. Of some 3,000,000 yards of city and country concrete pavements built in recent years, the average first cost has been $1.22 per square yard. The annual upkeep expense per mile on these roads has been almost nothing. In Bellefontaine, Ohio, concrete pavements in use eighteen years have cost annually for maintenance only one-fourth of 1 per cent per square yard. Upkeep cost of Wayne county, Mich., country concrete roads for three years has averaged but $2.50 per mile. In 1911 the mean cost of repairing macadam roads in New York state was $800 per mile—10 per cent of the first cost. If these roads had been concrete, practically all this immense expense could have been saved and used in building new roads instead of repairing old ones. With better roads will come better schools, better churches, happier homes, better business and decreased cost of living.

Rubber boots are the thing to wear when splashing around in mud, but they should be at least one size larger than the shoe usually worn or they will be too cold and damp for early spring.

$1.90 FOR THIS DANDY GATE

These gates are not a special lot built down to a low price, but are full of the same quality, satisfaction and durability which can be obtained in any of our **triple-galvanized, high-carbon steel**

To the Man Who Earns the Family Bread

It is important for the man of the family to know what it means to him in muscle and energy to eat the right kind of bread.

A pound of strong, glutinous flour, costing less than 4 cents, has more food value than a pound of meat.

The Guaranteed Flour
OCCIDENT

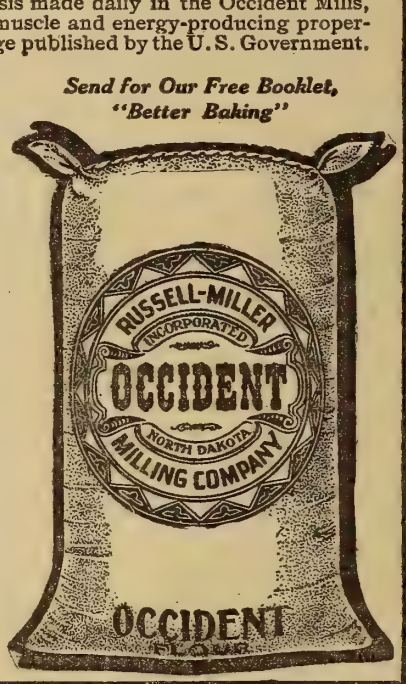
—according to exact chemical analysis made daily in the Occident Mills, contains a far higher percentage of muscle and energy-producing properties than the highest grade flour average published by the U. S. Government.

This extra food value in OCCIDENT Flour is due to two facts:

1st. We select for OCCIDENT Flour only the choicest portion of the richest bread wheats produced.

2nd. All the dirt from the crease of every wheat kernel is removed by special machinery, together with all wheat hair and fibre, so that every ounce of OCCIDENT Flour is clean, pure food.

Send for Our Free Booklet, "Better Baking"



Because of this extra cleanliness and wheat goodness OCCIDENT Bread keeps fresh and moist longer than other bread; has a sweeter, more satisfying taste and is a purer, better balanced, more valuable food.

Costs More —Worth It OCCIDENT costs only a few cents more per sack, and every sack is guaranteed to please the housewife better for all baking than any other flour she has ever used or her money refunded. It will repay you to give OCCIDENT Bread a month's test. Test it on our Money-Back Guarantee.

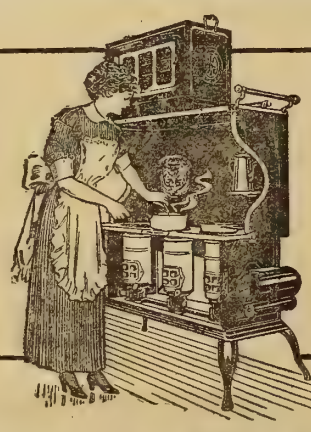
Dandy 72-page Cook Book mailed Free to any address on receipt of five cents in stamps to cover cost of mailing. Send for it today.



Write for booklet which illustrates and describes all models of the NEW PERFECTION Oil Cook-Stove as well as full equipment.

The Comforts of the City Kitchen Brought Home to the Farm

Install a NEW PERFECTION Oil Cook-Stove, Madam, and immediately transform your kitchen into a City Kitchen, with all the convenience and efficiency afforded by gasoline or gas but *with one-third to one-half less expense.* The handy Cabinet Shelf makes it an all-the-year-'round cook-stove.

New Perfection
WICK BLUE FLAME
Oil Cook-stove

is a wonder. Eliminates the dirt, dust and delay of using coal. More heat units than gas or gasoline and minus their odor. Perfectly safe.

Lights on the instant, producing a true blue flame. Boils, broils, bakes, roasts or toasts.

Handy to get at. Easy to operate.

Two minutes to install. No flue nor stove pipe.

Equipped with the new oil reservoir and indicator; and with or without portable oven, cabinet shelf, odorless broiler, special toaster, aluminum pan cake griddle.

Cost—surprisingly small. Ask your dealer for demonstration and prices.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 639, Aurora, Missouri.

WITH THE EDITOR.

While working to secure such women's rights as the ballot, equality before the law and a fair field in the world of industry it is well to remember that there are other important rights which no one, however conservative, desires to withhold from women. There is the right of every woman to so develop herself that she shall be hungry to do a share of the world's work, ready to bear a share of the world's suffering, eager to give herself in service.

There is the right of the maiden to be pure as the lily, sweet as the rose, modest as the violet, busy as the bee, wise as the serpent and harmless as the dove.

There is the right of the matron to make home as an oasis in the desert, as the shadow of a great rock in a sun-stricken land, as food to the hungry and drink to the thirsty, a place of inspiration and refreshing to which in all the years of life's pilgrimage the heart returns, crying, "There's no place like home!"

There is the right of the daughter to so honor her father and her mother by affectionate helpfulness that they shall bless the day that she was born.

There is the right of the wife to be such a treasure house of sweetness and goodness, serenity and capability, discretion and strength that her husband will recognize in her the woman of whom Solomon said, "Her price is above rubies."

There is the right of the mother to so birth and rear her children that maturity shall find them healthy, educated and self controlled, prepared to make life a blessing to themselves and to the world in which they move.

There is the right of every woman whatever her age or condition to be above pettiness and deceit, to be above scandal and backbiting, to be above vanity and idleness, to be above meanness and self seeking; to be, on the other hand, so fine and so clean, so generous and so kind, so tender and so tolerant, so full of charity and faith and good works that she shall be worthy of tender love and loyal friendship and the "well done" of the Master.

For a woman to avail herself of these rights is to make womanhood a crown of glory more to be desired than the coronet of any queen, however splendid her diadem.

HOME AND HOMEMAKING.

THE INFECTION OF OUR MOODS.

Our state of mind affects other people. If we sing, how often someone else is heard taking up the strain. If we smile, someone else will be smiling, too. Or, if we frown, our friends and all with whom we come in contact catch that frown. When we come to think that it takes no greater effort to smile than to frown, why not smile, to help cheer up this old world of ours? Or sing a little song that someone else may join in the refrain? Learn to laugh. A good laugh is better than medicine. Learn how to tell a story. A well-told story is as welcome as a sunbeam in a sick room. Learn to keep your troubles to yourself. The world is too busy to care for your sorrows. Learn to see the bright side of things. If you cannot see good in the world, keep the bad to yourself. Learn to hide your pains and aches under a pleasant smile. No one cares to hear them. Learn to meet your friends with a smile. The good-humored man or woman is always welcome, but the hypochondriac is not wanted anywhere.

SONG OF THE CHICKADEE.

List to the song of the chickadee,
Perched in the top of the leafless tree;
Keen winds ruffling his breast of down,
Coat of gray with its trimmings brown.
Tilting aloft his black-capped head,
Giving a lift to his wings outspread,
Chickadee chirps: "Chickadee-dee-dee!
Got any crumbs to bestow on me?
Winter and summer I bring you cheer;
There's never a day in all the year
You may not hear me. I'm small, you see,
But I'm bright and active and full of glee."
From limb to limb then he hies away.
Out on the branches you see him sway,
Black cap bobbing about as he
Sings: "Chick, chick, chicka, chickadee, dee!"

WOMAN'S WORK THAT COUNTS.

This is not so much a man's world as it was a century ago—nor as it was yesterday. If there is good to be done, or a message to be delivered, it is driven home through women. If it is a good work or a true message, women perceive it. It is the women who are listening today. This is not rightly a man's world. Great men are but dreams of women become militant. Women are the real inspirers of men; they ignite his every conception. Never yet has man sung, painted, prophesied, nor in any way woven tighter the spirit of his time but that his mother was first great enough to attract the gift; and more often than not, upon his maturity, the potential gift was startled into its supreme expression by another mother's daughter.—Will Levington Comfort in Joe Chapple's News Letter.

SMILES.

My grandson, four years of age, always took his afternoon nap, but one day he became restless and could not go to sleep. I told him to count forty over and over, and that would put him to sleep. He counted forty and forty again and again, but could not get results. Then he said:

"Grandma, how can I do two things at once—count forty and go to sleep?"

Little Elmer—Mama, I saw a man down at the blacksmith's shop making a horse.

Mama—You must be mistaken, Elmer.

Little Elmer—No, I'm not, mama. He had the horse nearly finished when I came by. He was just nailing on the feet.

MARY'S LITTLE COLD.

Mary had a little cold,
She took it in her head,
And everywhere that Mary went,
That cold was sure to spread.
It followed her to school one day—
Against it was no rule—
And Mary soon had given a cold
To every one in school.
The teacher tried to turn it out,
The teacher said, "Ker-choo!"
The teacher couldn't do a thing,
For the teacher caught it too.

FOR THE COOK.

Foam Griddle Cakes.—One-half pint of sour milk, a pinch of salt, yolk of one egg, a piece of butter size of a hickory nut, enough flour to make a batter; beat all together for five minutes, then add one-third of a teaspoonful of soda dissolved in one tablespoonful of boiling water and, lastly, the white of the egg beaten to a stiff froth and stirred in slowly, as if for a sponge cake. Bake immediately on a hot griddle.

Bacon and Apples.—Have the bacon cut very thin, lay it in a hot pan and let it fry in its own fat. Keep it hot on a plate after taking it up, and fry in the fat left in the pan thick slices of cored but unpeeled apples. When cooked tender, serve in the dish with the bacon, apples being laid about the edge of the platter. If the apples are tart, sprinkle a little sugar upon them just before taking from pan.

Sausage and Eggs.—One pound of

KITSELMAN FENCE

We make you the same price we would make the Dealer or Jobber. That is why we can save you money. Look at these very low prices.

FARM FENCE

11½ cts. a rod for a 26 in. high fence; 17 1-4c a rod for 47 inch high stock fence; 28 1-2c a rod for a 60-in. heavy poultry fence. Sold direct to the farmer on 30 Days Free Trial. Special barb wire, 80 rod spool, $1.85. Catalog free.
INTERLOCKING FENCE CO.
BOX 17 MORTON, ILLINOIS

sausage, two tablespoonfuls of fat and three eggs. Use the cold sausage, skinning and cutting them in slices. Put them in the frying pan with the melted fat, fry them on one side, turn them over and when they have had time to fry sufficiently on that side, pour the beaten eggs into the pan over them and cook until the egg "sets." Fold it like an omelette and serve hot.

Oatmeal Gems.—Soak over night a cupful of oatmeal in a cupful of cold water. In the morning sift together one cupful of flour, two teaspoonfuls of baking powder and a very scant teaspoonful of salt. Add this to the soaked oatmeal and mix thoroughly. Wet the mixture with half a cupful of sweet milk, thus making a stiff batter; drop into the buttered gem pans and bake for fifteen minutes in a quick oven.

AMONG OURSELVES.

The strength and the charm, the usefulness and the pleasure-giving powers of this circle depend upon its membership. I have said this before, I say it again today, because today's program so convincingly illustrates the truth of the statement, and withal gives the friends the privilege of looking into the faces of two valued members who are typical of this new country and this new time which produces men and women who as husbands and wives are at once lovers and partners and comrades. Coming Among O rselves as they have done for the past several years Mr. and Mrs. E. W. Christie, of Paola, Kan., have incidentally told us a little about themselves, but there are other things the circle would like to know now that it is meeting the Christies in this more intimate

Drawn Expressly for Montgomery Ward & Co. By George Brehm

Pick What You Want From These Pages

In word and pictures the hundred thousand items in the great new Catalogue of Montgomery Ward & Co., are so realistically and truthfully described that you can almost pick what you want from its thousand pages.

Photography and color engravings, pen pictures and word pictures are so skillfully and truthfully employed that your visit to "Bargain town" will be like viewing the world's greatest shopping centers thrown into one great mammoth establishment.

And the rare beauty of it all is that you can go through this enormous collection of bargains without the hustle or bustle and burly that accompanies even a visit to the village store.

In the quiet of your own home—under the evening lamp—with the members of your family to accompany and guide you—it is possible *now* to shop in the Ward way—and save many dollars in doing so.

All you need is our Catalogue of 1000 pages. In it are shown a hundred thousand opportunities of saving in foods, furniture, farm implements or field necessities, dress goods or men's wear—any and every necessity or luxury for man, woman or child.

And it won't cost you a cent to get this great text book in the art of reducing the high cost of living, except the stamp spent in sending for it. Cut out the Coupon on this page, sign your name today, and the greatest Catalogue of modern times will be sent at once without one cent of expense and without any obligation.

Our only suggestion is—sign and send the Coupon today.

The Right Culvert

For use on your farm, as well as for highways and railroads, is made from

APOLLO

BEST BLOOM Galvanized Sheets

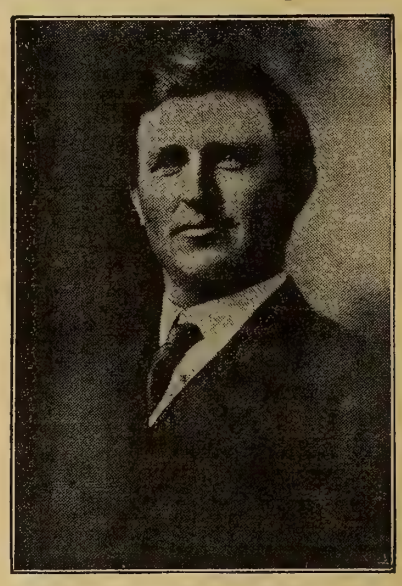
"A product without a peer"

Culverts made from Apollo are strong, rigid, lasting. Every farmer, supervisor, commissioner and engineer who is interested in securing Culverts that will give service and satisfaction, should demand that they be made only of Apollo. Unexcelled for culverts, tanks, flumes, roofing, siding, and every form of sheet metal work. Over twenty-five years of satisfactory use proves the superiority of Apollo. Upwards of 450,000 tons of Apollo Sheets used during 1912. Send for booklet "Facts for the Culvert Manufacturer and User." It is free.

AMERICAN SHEET AND TIN PLATE COMPANY

General Offices: Pittsburgh, Pa.

fashion. I have asked no questions, but I have had little private conferences with our friends in which I have learned some facts I shall take the liberty of revealing. With Mr. and Mrs. Christie there is no "mine" nor "thine," it is always "ours;" the farm belongs to both alike and its success is a matter of concern to both alike. When business takes Mr. Christie away from home Mrs. Christie looks after the chores with no thought that it is not her work; and when Mrs. Christie goes away for a little visit to her mother or some friend, Mr. Christie looks after himself without any thought of being neglected. I have never visited the Christie home, but a little bird tells me that it has harmoniously dressed walls and comfortable furnishings, and that in the living room there is a table piled with books and magazines and papers, and that the whole place radiates content and rest and cheer. The same little bird tells me that when Mr. and Mrs. Christie return from town or a spin in their motor car that while he goes to look after the stock she takes a look at the poultry. I do not know what breed the Christie hens are, but I am sure they are good hens; they must be, for they laid twelve dozen eggs per day in February. Dearly as Mr. and Mrs. Christie love each other and their home their interests are not confined there. Not at all. Both are interested in Sunday school work and the improvement of rural schools, both are interested in politics; and



E. W. CHRISTIE.

being capable and progressive their services are in demand in the county. During the recent election both did their part nobly, and when the ballots were counted, together they rejoiced that Kansas had increased the force that makes for righteousness in state and national politics by extending the right of suffrage to its women. There are other things I might tell you about the Christies, among them that she is a convincing speaker at Sunday school gatherings and that he is county chairman of the party which represents his political ideals, but enough has been told to justify our congratulating ourselves that the Christies and we are friends, and nothing more is necessary, especially today when they each bring us a message.

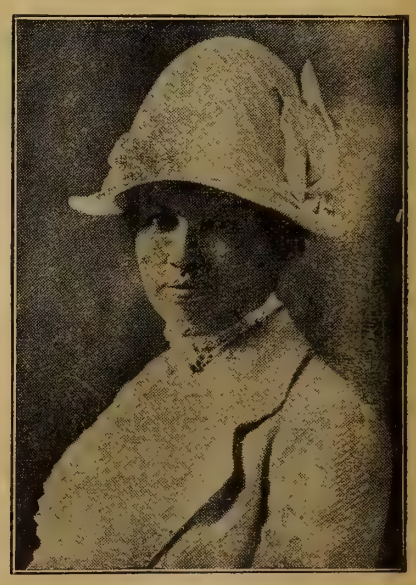
As men appear on our program but seldom I follow our usual precedent and give the man first place. I take pleasure in presenting Mr. Christie who, at my request, will say something about the enfranchisement of the women of Kansas:

The right of suffrage was given to the women of Kansas at the last election, and the activities of the women since that time are of much interest to citizens who are interested in the moral betterment of our state and nation. The women, through their clubs, have taken up the study of civics and will cast their first vote fully as intelligently as the men. They have spoken at the big political meetings in the state and have said to the men in very certain terms that if their party politics means trickery, graft or individual aggrandizement they are not with them, but if it means the betterment of the home, the state and the nation, fidelity to moral and humane causes, and greater honesty in the government of state and nation, then they are with them. The women of Topeka have formed a "good government club" which, working in conjunction with the Federation of Women's Clubs and W. C. T. U., has suggested much good legislation and has worked for laws during the present session of the legislature to make women's property rights the same as the men's, for a white slave law, one of the most stringent in the country; for a minimum wage for working women. They have also taken the names of all legislators who voted against them. The women are interested in moral and humane causes and stand for a fair deal; they have done much work already and it is all to the good, with no indication of any bad, as some who opposed the amendment prophesied before election. The women most interested are the ones who are working to make the boys and girls of the county better farmers and business men and better housekeepers; they want them kept off the streets late at night, and the undesirable moving pictures banished. Here is to woman suffrage, and may it soon spread all over this great country of ours. The large meetings, the march to Washington and the parade are a means of inspiration that give needed courage and enthusiasm to the workers, and attract the attention of men and women who are indifferent. Men should favor this woman suffrage amendment if for no other reason than to get the help that will mean more efficient government.

It is one of the most encouraging signs of the times that men like Mr. Christie—clean, keen, straight-forward, fair-minded fellows—are to be found joining the equal suffrage ranks in increasing numbers. What seems to be most needed now is to convert the good women who conservatively hold aloof. This men like our friend are pretty sure to do.

Nobody has enjoyed her husband's remarks more than Mrs. Victoria Christie, who will now take the floor with the consciousness that whatever she may say Mr. Christie will be sure to tell her afterwards he was proud of her:

How many of you women are entirely satisfied with your surroundings, your children's school privileges and this government of ours? None of you with all three, I dare say. Is your discontent that worse than useless sort that laments copiously, but does nothing? What are you doing to improve matters? Of late years one reads of "efficiency" engineers being called in to straighten out tangles in business administration, and most of the snarls prove to be the result of nothing worse than someone's failing to use his gray matter, running along in the same old rut year after year without stopping to ask himself, "Is there an easier or shorter way to perform this process?" Try this inquiry on your housework and see if you find what I did. Do you use the chopping bowl and knife because you really love to work with them, or because you don't think? A slaw cutter costs twenty-five cents. It will take care of all the vegetable and most of the fruit slicing. Do you chop raisins, suet, etc.? The meat grinder with a suitable blade makes play of that tiresome job. And so on ad infinitum. We bemoan the hard work and long hours housekeeping demands. Very well, but what do we do about it? We can work a revolution if we determine in the future to buy house furnishings that are at once beautiful, comfortable and easy to care for, to keep the word "convenience" to the fore in all interior arrangements, insist that our wardrobes be simple and be-



MRS. VICTORIA CHRISTIE.

coming first, fashionable second, instead of vice versa, and generally turn the "efficiency" searchlight on our occupation. I shall not dwell long on the school question. Educators and taxpayers agree that education must be more practical, the child must be more "efficient" for his work in the world. We are waking up in this respect. It remains to work the idea out in a concrete form that will best meet local conditions. We are waking up politically, too, but a great deal more thought is needed along this line. What is your attitude? Fussing around at home and to a few friends, and then electing the same men again, or others no better? "Patriotism" is a word worn threadbare in political campaigns and on national holidays, but kept in cold storage the rest of the year. The idea it stands for should be every American's steady job, week days and Sundays. It isn't a mat-

ter of casting ballots and bearing arms exclusively, by any means. I am a patriot if I help to make my government more "efficient" no less than if I fight to preserve it. We need more public-spirited men of large experience and great ability who will accept an office paying little or no salary in the same spirit in which they would answer the president's call for volunteers. Many of our governmental troubles come from the lack of training or mental incapacity of officers we have elected. We women who have the suffrage must bear this responsibility equally with our men. Let us do our part with vote and influence in the same spirit in which our foremothers scraped lint, rolled bandages and collected hospital supplies. They were "efficient;" let us do our work as patriotically and well.

That is a fine message Mrs. Christie brings us, and a fine appeal she has made to us as women; I trust we will heed the one and respond to the other. It used to be rather a misfortune to be born a woman. It is no longer so in America where each year sees women approaching nearer to that legal, political and economic equality so greatly desired by those who see in women's freedom a new hope for mankind.

Among Ourselves within a few weeks will look into the face of another of the friends whose coming always means a fine message. To stimulate appetite for the approaching treat Mrs. Soesbe comes to us today with a book talk:

As the commencement season will soon be with us again and many will be seeking appropriate gifts for young friends, I thought perhaps a few more suggestions on books for young people might not come amiss. It would be my advice in seeking gift books to avoid the new books, "best sellers" though they may be There are exceptions, of course, and I would make an exception now in favor of "Mother," by Katherine Norris. Surely every girl will be better for reading this simple little story. Among the books which time has tested are the "Penelope" books, "Rebecca" and "Mother Carey's Chickens," by Kate Douglas Wiggins; Mary E. Wilkins' earlier writings, especially "The New England Nun" and "Other Tales." Collections of short stories by Henry Van T. B. Aldrich and Margaret Del[illegible]e pleasant and profitable reading. I quite agree with Mrs. Lowater in regard to the Patty stories. While "The Awakening of Helena Ritchie" and "The Iron Woman" are much better suited to mature than to youthful minds, I cannot feel that it is quite just to classify them with "The House of Mirth" and "The One Woman." The whole atmosphere and moral tone of Mrs. Deland's stories seem to me to place them far above the other books mentioned. Aside from fiction there is one little book which I wish could be put into the hands of every girl graduating from high school or college. It is entitled, "What is Worth While," by Anna Robertson Brown. This was first read as a paper before the Association of Collegiate Alumnae and can now be secured in a dainty, but inexpensive binding. It is full of helpful thoughts for girls who are just entering the period of life when they must choose not only between good and evil, but between good, better and best. If you do not care to give a book to the sweet girl graduate I am sure she will be pleased with a pretty piece of china or a bit of silverware. Every girl treasures the pretty things that will adorn the home over which she may some day preside. Boys are such a problem when it comes to buying presents that I am going to add a few books suitable for boys, taken from a list by Hamilton W. Mabie: Scott's novels, Dickens' "David Copperfield" and "Nicholas Nickleby," E. E. Hale's "A Man Without a Country," Hughes' "Tom Brown's School Days," E. Thompson Seton's animal stories, Nicolay and Hay's "Life of Lincoln" and Horace E. Scudder's "George Washington."

The book lists Mrs. Soesbe brings us are so good that they should be kept for the many occasions when a book is a suitable gift. It is a commendable custom, one obtaining in many homes nowadays, to give the children a book on each birthday. Some also give a book at Christmas time and on other occasions such as graduation or when special honors are won at school. Where this is done there is rarely heard the complaint that "our children do not seem to care for reading."

We are to have Mrs. Soesbe's picture; we have had Mrs. Lowater's and no one is more welcome in our circle than this friend whose coming has so often enriched us. Today it is a bit of verse she brings us. It's title is "A Week Ago:"

A week ago, with a merry shout,
  Under the window my baby played;
To and fro in the path he ran,
  And once to the snow untrodden strayed.
The prints are there—I see them now—
  They are still untouched in the firm, white snow,
But my baby has gone from my love and care
  To the land where flowers forever grow.
But O to think that the careless touch
  Of the restless little feet should stay,
When he who made them has gone so far—
  The width of the universe away!

Mrs. Lowater's is the master touch—exquisite sentiment and perfect technique—but one need not be a judge of fine poetry to appreciate "A Week Ago."

Before the work of house cleaning commences the careful housewife looks over winter garments and discarded clothing. Anticipating this Miss M. A. T. comes to talk with us about "Homemade Rugs:"

There is no better way to use up old materials that are not good enough for anything else than to fashion them into pretty and durable rugs, many of which are quite easily made and without any expense. Perhaps the easiest way to make a rug is to make the foundation from some stout material, cut it the shape and size you want the rug to be when finished. Cut the pieces for the rug into strips about three inches wide and lay three or four of the strips together and stitch on the foundation through the center and stitch the strips as close together as possible, and as each strip is sewed on, cut into fine fringe and the colors can be arranged to suit one's taste. Similar rugs are made by cutting old rag carpet into strips three inches wide crosswise of the rags. Sew these strips through the center about one-half an inch apart, then ravel out the warp, leaving a heavy fringe that will lie up well and make a thick, heavy rug. Another way is to bend two wires like a hairpin and wind rags in and out, just like making hairpin trimming, and stitch with the sewing machine through the center to fasten it to the foundation. Cut open the loops when the wire is pulled out and these rugs are best made in stripes. Anyone who understands using the crochet hook can make lovely rugs of any shape or size. A really handsome rug was made with a dark red center with a black border and finished with black yarn fringe, and to make this fringe an old white yarn shawl was colored black, then raveled and knotted into the fringe. The same dye of a dark shade of red was used to color the woolen pieces for the center, as this rug was made entirely of woolen pieces. Another rug was made entirely of cotton pieces colored a dark brown with the dyes for cotton and finished with a striped border of red and brown. When these rugs were finished they were tacked to a piece of stout carpet to make them heavier and insure better wear. A number of rugs can be made in this way with very little trouble, time or expense. They give as good service as the high-priced, ready-made rugs, and they are as pretty, too, if they are carefully made and with pretty colors.

Utilizing left overs and scraps of all kinds to produce what are known as "by-products" is making many a business man rich. We housewives should not be behind hand in our special domain so let us profit by these hints on rug making.

Before the winter meat supply gets low, perhaps since Mrs. Lewis is to talk about cooking the cheaper cuts of beef one should say when the meat supply is low, it is good to know how to serve the less attractive portions appetizingly. Let us listen:

I wash the meat in warm water and at once plunge it into boiling water, to boil gently until thoroughly done. I salt when about half done. I cook enough for several meals at one time, using two kettles. Today we will have a roast dinner. About twenty minutes before the meat is done drop into one kettle enough potatoes for your family, peeled and sliced rather thick. When almost done remove kettle from fire and lift the meat into your roaster. Around the meat place the potatoes and a little of the fat from the kettle and place in the oven and roast a golden brown; remove the meat and potatoes and make a nice brown gravy using flour and some of the broth still in the kettle. Tomorrow we will have a boiled dinner. Remove meat from the kettle, place in oven and brown, and when the broth gets hot drop into it your favorite vegetables, combining two or three. There are so many vegetables to choose from one can have a variety from time to time. When your vegetables are done season with salt and pepper to suit. I always make use of every bit of the broth, either for soup or gravy. Drop dumplings, noodles or macaroni in. Sometimes they are all nice cooked in the broth and served as soup.

Sometimes I feel our program could hardly have been better. Consider that of today and ask yourself if our Home Department has not good reason to be proud of its contributors.

It is beginning to be gardening time in some places, but in others it will be some time yet before seed sowing. Meantime will not the friends exchange lists of the best varieties of the ordinarily grown vegetables. Please, if you know of a specially good variety of anything sit down right now and write about it that we may all have the benefit.

The contest articles are in the hands of the awarding committee, returns may be looked for quite soon

Get greater use and profit from your vehicles by keeping them well finished with Sherwin-Williams Buggy and Auto Paint

Like all the other Sherwin-Williams Finishes this paint is prepared particularly for its purpose. It paints and varnishes at one operation, and is designed for use on buggies, automobiles, carriages and sleighs. It gives a hard durable gloss finish which may be washed and rubbed without marring. Sherwin-Williams Buggy and Auto Paint is but one of the many Sherwin-Williams Paints and Varnishes for farm use. It is sold by dealers everywhere, in 8 colors as well as black and clear. Ask for color cards.

If you will simply drop us a line we shall be more than glad to send you our free booklet, **"Paints and Varnishes for the Farm."** It is interesting, practical and worth reading.

"YOU CAN HAVE MY KIND OF LIGHT ON YOUR FARM," Says BILLY BULB

and it makes it a brighter, happier and altogether more efficient farm, too. There's no light in the world like Electric Light, none that you can so absolutely depend on, none so safe, none that creates a brilliance nearer Nature's own sunshine. Don't be discouraged because your farm happens to be remotely situated. An Individual Electric Lighting Plant, consisting of a small gas engine, a dynamo, a simple switchboard and a storage battery called

The "Chloride Accumulator"

will do the trick for you. The "Chloride Accumulator" is a storage battery of exactly the same type as that used in large city electric lighting stations. You only have to connect it with your engine and dynamo for a few hours occasionally and it stores up enough electricity to furnish light the balance of the time. This means convenience and economy for you. It means that you do not have to bother with starting your engine at the moment light is needed, it means that you save on gasolene and have the use of your engine most of the day for regular farm work. And, best of all, it means that your light is always there at the touch of your hand on a switch. Post yourself on Farm Lighting. Write for our interesting book, "Use Electric Lighting." Address our nearest office.

Electrify Your Farm!

Electrify your farm and save hours of time, miles of steps and a big pile of dollars. The power, convenience and luxury of electricity can be at hand *all the time*—summer or winter, rain or shine—if you use a few French Dry Batteries.

They Help All

Just the pressure of a button or a twist of the wrist and *presto!* the gasoline and automobile engine is started; both party and exchange lines of the telephone are working; gates and doors are opened; call bells are rung and scores of other duties are performed. Everyone in the family will benefit by the use of a few

Think of having electricity "on tap" all the time! Father, instead of fussing with a dangerous kerosene lantern in the dark barn, now simply pushes the button of an electric flasher. Mother doesn't stumble down the dark cellar stairs risking life and limb any longer. She "switches on" a light at the head of the stairs and goes her way in safety. A telephone between the house and the barn is a great convenience.

The mail-carrier can press a button on the mail-box 'way out on the road, which rings a bell in the house telling the folks that there's some mail in the box. These and dozens of other helps are yours with French Dry Batteries.

Get the Genuine

If you want a battery that will deliver a strong current for a *long time*, insist on the genuine French Battery—the dry-cell battery with an army of satisfied users. Poor-quality batteries give weak current for a short time and then "peter out" entirely. Don't take chances! Your dealer will tell you the particular French Battery you need. If you want to know more about French Dry Batteries and how they can help you do your farm work, send your name and address on a postal. Write today. (3)

Harvey Bolster Springs

prevent damage to eggs, garden truck, fruits, live stock on road to market. Make any wagon a spring wagon. Soon save cost—produce brings bigger prices—wagon lasts longer—horses benefited—thousands in use—"my wagon rides like auto" says one. Get a pair at dealers. If not at dealer's write us. Insist on Harvey's. 40 sizes—fit any wagon—sustain any load to 10,000 lbs. Catalog and fistful of proofs free.

The International Sunday School Lesson

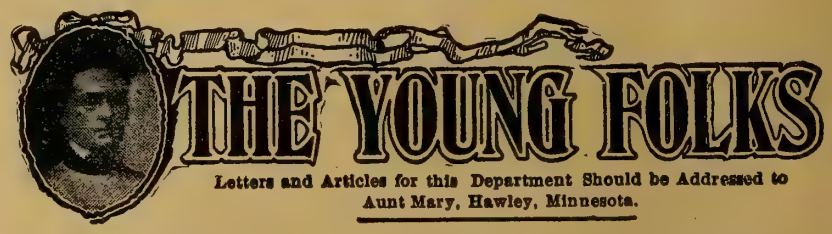
FIRST QUARTER. LESSON XII. MARK XVI., 1-11. March 23, 1913

THE EMPTY TOMB. EASTER LESSON—THE STORY.

Joseph and Nicodemus—noble mourners—follow in that funeral procession unparalleled. The distance is very short to Joseph's new rock-hewn tomb in the garden near to Calvary. In the cool vestibule of the sepulcher the bier is set down. Water is brought from some neighboring pool or fountain. That precious casket of clay so marred, is laved with sacred care. The brow lacerated by the thorny crown, the back corrugated by the merciless scourge, the wounded hands and feet, the pierced side, the blood clots and death sweat, all dissolved and washed away, and the body thoroughly dried, they begin to swathe the limbs and torso with broad linen bands, sprinkling copiously the powdered spices in every fold. Last of all, they cover that serene and holy countenance, imprinting it, no doubt, with a kiss of undying affection. The task being finished, they carry the enswathed body from the antechamber to the grotto, and lay it gently upon its stony berth in the wall. All having come out of the crypt, but one thing remains to be done—the rolling of the great millstone against the door of the sepulcher, and the placing against it in turn of the lesser stone. Through the night of the passover Sabbath that holy form rests on its rocky couch, embalmed in the fragrance of the flowers of the garden, and needing not the unguents which love had provided. On the dawn of the Sabbath the fear, which has by this time grown to an insupportable degree, drives the Sanhedrists to Pilate's hated bar. It was hard for Pilate to concede to them their first request concerning a living man; but to one whom death ended all, the petition concerning one already dead seemed a matter of entire indifference. With a contemptuous toss of the head, he bade them to do what they pleased with a dead body. Thus another link was forged in the chain of evidence. The lives of the Roman guard were the forfeit if they allowed the body to be removed, as was the life of anybody who would break Pilate's seal. The record here is charmingly artless, it is transparently true. The women, not knowing how complete the embalmment had been, at the very earliest hour practicable take additional spices, and run to the sepulcher. They are so precipitated that they forget the heavy stone which would make their entrance to the tomb impossible. Had they forgotten Jesus' oft-made declaration that he would rise from the grave? Certainly not, but evidently they, with all the disciples, gave it a spiritual interpretation. And the apparent desecration and robbery of the tomb was an overwhelming surprise and grief to them. But the open tomb of Jesus was converted into a bureau of information for his troubled disciples. White-liveried attendants were there to point them to the place where the Lord lay, and to the grave clothes folded and laid in such orderly fashion as to preclude the idea of a hasty and clandestine removal, and to announce the blissful truth, "He is risen!"

The Teacher's Lantern.

By the act of that hour, Joseph and Nicodemus burned the bridge behind them. They could never go back to Judaism. Having touched a dead body—at least having been within the prescribed four cubits distance of a tomb—they can have no share in the festivities of Passover week. What cared they? Did they not already know that God had some better things in store for them? On the morning of the third day the seal was broken, the stone rolled away, and the body gone. Friend and foe alike admitted this. Some circumstances transpired, against which even the world-famed descipline of the Roman soldier proved inadequate. The only historically credible account of that circumstance is based upon the testimony of the disciples. The only suffiient explanation of the bewilderment of the guards, the surprise of the disciples, and the consternation of the Sanhedrists, is found in the resurrection of Jesus. New revelations always come while in the way of loving service. Loyal, unforgetting affection, while on its way to do its last rite, made the most glorious discovery of all ages—the empty tomb of the first Easter morning.



Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

MY MOTTO.

Do it well, or not at all.—Diamond Queen, age 10.

If at first you don't succeed, try, try, try again.—Many Cousins.

Who doeth his best, doeth nobly; angels could do no more.—Aunt Mary.

ROLL OF HONOR.

Allery, Arkansas Boy, Artful, Audubon, Badger Boy, Beacon, Bendal, Big Foot, Bluebeard, Buffalo Bill, Bumper, Captain, Corn Plower, Coyote, Daniel, De Simon, Dewey, Drake, Ed, Ego, Einar, Emilzur, Everett, Ferris, Firm, Gil, Glenno, Grant, Harrie, Harris, Hay Pitcher, Holbrook, Hooker, Hunter Bob, Jeff, John Paul, Jose, Junior, Linn, Lone Tree, Lynx, Mark, Mayron, Meadow Lark, Mee, Michel, Middie, Miller, Mittel, Mose, Nebraska Farmer, Nobleman, Overalls, Pierre, Potter, Preston, Rattler Dick, Rider, Rollie, Royson, Shortie, Show-me Boy, Singer, Silver Threads, Sivert, Skeezicks, Sly Fox, Spring Violet, Sunflower George, Tenn, Tolbert, Topnot, Valiant Rider, Verner, White Cloud, Wiggly Will, Willard, Willie, Willow Creek Boy, Zeke.

These boys all won places on the Roll of Honor by sending good endings to the story by Chipmunk about Tom and Will and the wolves.

The following do not earn credit here, although they sent endings to the story. But, girls, this contest was for the boys only, so Clarina Den, Gay, Ina Baker, Laura Jensen, Lazy Joe, Margaret Cash, Mary Kelly, Minnesota Rosebud, Phyllis Hoffmann, Princess and Ruth Saving get no credit for their stories.

Quite a number of the boys wrote on both sides of the paper, and for this their stories, although ever so good, received no credit: Clifford Barnard, Eldon Tool, Fay Haverstick, Hunter, Master Skylark, Orin Koxlien, Paul Vavricka, Walter Upton and William Mathieson.

One list of Roll of Honor young folks was destroyed in the fire we spoke of last week, and as there is no way of telling what names were lost, you must just all try again.

A DREAM OF SUMMER.

I can hear the clock on the mantel
As it ticks the hours away;
And I sit and dream, in the firelight's gleam,
Of a beautiful summer day.

Of a day when the world is happy
And the sun shines warm and bright,
And the birds all sing, and the cowbells ring,
And everything seems just right.

And I dream that, as shades of night gather,
I can hear night birds singing, so pert;
And silvery notes rise from whip-poor-wills' throats,
While the little frogs hold a concert.
—Vernie, Worleytown, age 16.

THE STORY IS FINISHED.

A few weeks ago we published a part of a story and asked the boys to finish it in their best style. Ninety

Paint Fine-ness

House paint, to be good, must be smooth as silk and opaque as ivory. Both qualities result largely from *fineness*.

Dutch Boy White Lead sifts through finest silk—28,000 microscopic holes to the inch. With Dutch Boy Linseed Oil it makes the smoothest, most opaque paint.

Dutch Boy White Lead—white in the keg—any color you want to make it on the house.

Dutch Boy White Lead in steel kegs, 12½, 25, 50 and 100 lbs. Dutch Boy Linseed Oil, 1 and 5 gallon sealed cans. Ask your paint dealer.

Let us send you "Painting Packet No. 52" full of facts every house owner should know about painting. Also Handy Book on Painting, full of information for the man on the farm. We will include our catalogue of 150 beautiful stencils for walls.

boys essayed the task, and Aunt Mary is proud to state that nearly all of them did splendidly. We wish we could give all the story ends, but, of course, that is impossible. The prize is awarded to Young Huntsman, age 12, Monona, Iowa. The other boys will find their names on the Roll of Honor or below it. Worthy of special mention is the story written by Silver Threads, who had the boys rescued by Indians who afterwards carried them away captive, requiring another rescue before they finally reached home safe and sound. Most of the writers had hunters or other men come to their aid. Several made use of air holes for conveniently drowning the wolves. Some had dogs come to the rescue. Others set one wolf afire, which frightened them all away. Those which Auntie considered best were those in which Tom's quick presence of mind and courage brought them out unaided from a situation which was black indeed. The story follows:

One December morning Will and Tom buckled on their skates for the ten-mile trip down the river to Melbourne, to take their fall catch of furs.

It was growing dark when they were returning home, and suddenly they were surrounded by a pack of wolves. In an instant they were going fast, leaving most of the wolves away behind.

Some of them soon caught up, and one large wolf leaped upon Tom, bringing him down instantly. Will seeing the fate of his brother, fainted.

Fortunately for Tom he wore a heavy coat and although the wolf had seized him by the shoulder, its fangs did not reach the skin. Lying there under the great gray brute Tom did some rapid thinking.

"Will has the gun and he has fainted. It is useless to shout for help, for there is no one to hear. My knife! If I can only get at it I'll make an impression on this confounded wolf, anyway."

In the veins of the boy the blood of generations of mighty hunters still flowed strongly. Keeping his brain cool and his head steady even in his desperate plight. After some wiggling and twisting, during which the wolf shook him viciously, Tom succeeded in unsheathing his heavy hunting knife, and swinging his arm back as far as he could, he drove the sharp blade deep under the wolf's left shoulder. The great brute reared, fell backward, threshed the ground spasmodically a moment, then went suddenly limp. "Whoop!" shouted Tom, "I stuck him right in the heart!"

The remainder of the pack were full fed, having feasted in a farmer's sheep corral that afternoon and seeing the fall of their leader they veered off and disappeared into the wood.

Will, revived by the cold air, came to his brother's side. "I don't see what made me faint," he said sheepishly. "Guess I'm not much better than a girl."

Tom laughed. "Well, we must get busy and get the hide off. Lucky there's a good moon." The boy worked silently and swiftly, with the ease and dexterity of much practice, and soon the pelt was spread upon the ground. "It's the biggest wolf hide I ever saw," exulted Tom, as he rolled it into a compact bundle. "We ought to get a good price for it."

The boys skated rapidly down the river, and were soon within sight of their home. Their mother, as her habit was when any of her family were late in returning, had placed a bright light in the window.

Tom turned suddenly to his brother. "Say, Will, let's not sell this hide. Let's take it to Melbourne tomorrow and get the bounty, then have it made into a rug for mother. You know her birthday is next week. We'll say nothing about it, and surprise her."

"The hide is yours. Do what you please with it." Will spoke gruffly, still ashamed of his weakness.

"It is yours too, didn't you help skin it? And we can both pay for the tanning and lining."

When the boy's mother arose on the morning of her birthday she found that, early as it was, some one had been up before her and built a cheery wood fire in the living room. And in front of the fireplace was spread a fine rug with a piece of paper pinned to one corner, on which was written in Tom's round, boyish hand: "To mother, from Will and Tom. A happy birthday."

The mother's surprise and delight were very gratifying to Tom, but Will felt uncomfortable until he had told his parents the story of the killing of the wolf, told it manfully and with no attempt to conceal or excuse his own cowardice.

The sweet mother embraced both her boys, and their father, a white-haired trapper, said: "I think you will make a hunter, Tom, for your courage and presence of mind did not desert you in time of danger. And you, Will, have proved yourself a true sportsman, for you had the moral courage to tell the truth, when it would have been much easier to have said nothing."—Young Huntsman.

HOW TO GET RID OF THE HOUSE FLY.

The fly is a nuisance besides being a carrier of infectious diseases, and the attempt to exterminate it needs no justification. How one can make one's home, town or city flyless is described by C. F. Hodge, of Clark University, Worcester, Mass. He says that the American public spends 10,000,000 a year for window and door screens in a futile attempt to exclude a lively insect which insists on getting into the house every time the doors are opened. He believes also that the method of swatting the flies, using fly paper or indoor traps or poisons is ineffective, but may help. His method is to make use in various ways of the conical wire-mesh fly trap, which is familiar to almost every one, in such a way as to turn the tables on the flies and "put them in jail and let ourselves out." The plan involves, of course, the abolition as far as possible of all breeding and feeding places for flies and the application of the fly trap mentioned above to the garbage can, to the screens on windows, to the covers on manure bins, etc., all of which can be done by a little mechanical ingenuity. Garbage cans are on the market which have a cover larger than the can and not fitting down closely on it so that the flies gain access to the can under the cover and escape through a hole in the cover over which is fixed a fly trap. In fighting the fly, Hodge has found that the essentials of a successful campaign are to transfer the fight against the fly from the house to outdoors, and then to exterminate it. Another essential feature in a town or city is that households must cooperate. One ignorant or careless home can breed flies enough to vitiate the best endeavors of a whole town. Hodge has succeeded in his neighborhood in practically eliminating flies; he uses no screens in windows and doors, and can sit out doors or have windows or doors open at any time without molestation. As flies begin to breed early in the spring and as they breed with marvelous rapidity, the time to arrange for a fly campaign is in the winter.—[Journal American Medical Association.

Now is the time to scatter about four or five pounds of good clover seed on the rye or wheat field where the stand is sparse and the yield promises to be light. The clover stand thus secured will not injure the other crop in the least, and may be utilized for fall pasturage after the grain crop is removed from the field, turning it under for fertilizer later on.

Free To Boys

I Have a Glove, Mitt, Mask, Ball, Bat, Cap and Belt for Every Boy Who Will Write to Me.

There are seven splendid pieces in this great outfit. The ash bat is a good one. The mask is made of heavy wire, full size. The catcher's mitt is thickly padded, very heavy and has patented fastener. The glove is of tanned leather and has patent clasp. The ball is strongly stitched and will last. A neat, adjustable belt and a dandy cap complete this great outfit. Remember you get the whole outfit of seven pieces for a little easy work. Write me today and I will tell you just how to get it.

A. M. PIPER, 304 Popular Building, Des Moines, Iowa.

When writing to advertisers please mention The Homestead.

PROGRESS AND THE FARMER.

The progress of the farmer is written in the history of our country. He has been in the forefront of those who have responded to their country's call from the time Israel Putnam left his plow and rode to join his command at Concord down to the time when our government enlisted thousands of our farmer lads to fight the first war ever waged in the broad name of humanity, and in behalf of an alien people.

The American farmer has been in the front ranks of those who have helped to win the greater victories of peace, from the time George Washington left the cares of state and turned again to till the fields, down to the present day when the fruits of his labor have made this the richest as well as happiest land upon the footstool of the Almighty.

If progress is the spirit of the hour I need not remind you that the American farmer has always been in the vanguard of progress, for he has paved the way for civilization as he has made venerable forest yield fertile prairie, he has builded log school houses at the outposts of civilization and the boys and girls they have sent forth have become great in the councils of our land.

The primitive battles of the farmer have been fought and won. The rich soil of the corn belt yields its plenteous harvest, the cotton blossoms whiten the plains of the south land—out across the great divide the mountain streams have been diverted and the desert is clothed in verdure, and still the torch of progress beckons the husbandman onward.

The progress of the farmer is now in the direction of getting the full returns due him from Mother Earth, and we know the possibilities in that direction are vast and the limit of production not even approached.

Like every other progressive business man the farmer is turning to the higher branches of his chosen vocation. He is sending his sons to the agricultural college, he is himself taking a postgraduate course whenever the opportunity offers through institutions and short-course meetings to learn from those who have made scientific production a life study. As our colleges and experimental fields and institutes are multiplying, the results are everywhere apparent in newer and better methods and vastly more profitable results are being achieved at less cost. I have seen it stated that land which had been in cultivation for fifty years is producing more and better crops without artificial fertilization on account of tiling and better care.

The foundations of our national wealth, the fertile soil and the treasures hidden in the hills are still capable of vast expansion. That fact is the best evidence of the real prosperity of our country in season and out. Through the intelligently applied industry, and economy of farmer and miner they may be made the basis for vastly increased legitimate commercial activity, and with a scientifically planned banking and currency system which would answer the legitimate requirements of trade and commerce, and would not answer the demands of speculation and stock gambling, there appears to be no good reason why we might not enjoy permanent and increasing prosperity.

I think you realize that time would prevent my going into the astonishing maze of false theories and naturally reluctant misconception of the functions of banking and currency, even were I competent to discuss that question.

Agriculture in the abstract, however, is easier to understand, for the cultivation of the soil is a strictly independent vocation and in this country unhampered by law so far as production is concerned. The farmer is neither a trust nor a combination. He owes his prosperity to his own industry and the laws of supply and demand and is under no obligations to any set of lawmakers. He obtains his returns in the sweat of his brow in competition with the whole world. He asks no favors and he bars no competitors in his business.

The markets of the world reach out and want to know every detail of his affairs. He is being investigated 365 days in the year, and instead of howling about it, the farmer likes it. Now the farmer has the same right to know the true inward value of every industrial, railroad and banking corporation as they have to know about his business, and when we have that mutual understanding and knowledge there will be no more trouble.

I think we can speak of the farmer strictly in the scientific and economic sense, without commercial malice or political guile, and we have to recognize the fact that his prosperity is essential to the prosperity of the country.

We all depend upon the farmer and when he does not prosper the rest of us cannot possibly do so. I think we are beginning to realize more and more, that the farmer, merchant, manufacturer and banker are all interdependent and their interests in the prosperity of the country a common one.

You know we used to hear that the farmer had his prejudices—particularly against the banker, so we bankers commenced to look into that and we exposed the farmer. He hasn't a word to say nowadays against the banker. The poor farmer! He owns 80 per cent of the stock and a large proportion of the deposits of all the banks in Iowa. He is richer than the bankers, manufacturers and merchants all combined, while the product of his fields and feed lots is bringing in a stream of wealth fabulously great. When we talk about $9,000,000,000 crops, railroad statistics, banking totals and manufacturing outputs don't look very large. Such a figure is too big to mean anything in totals, but when we say it amounts to about $100 for every man, woman and child in this country, we commence to appreciate the value of farm products. —J. A. S. Pollard to Group II, Iowa Bankers' Association.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

6110 Child's Apron.—This dainty little apron is made to be slipped on over the head and may be fashioned of gingham, percale or chambray. It is a new design in child's aprons and is very simple to make.

The pattern, No. 6110, is cut in sizes 4 to 12 years. Medium size will require 1⅞ yards of 27 or 36-inch material. Price of pattern, ten cents.

6112 Miss's Dress.—This attractive frock is designed for the miss and small woman and the skirt is cut in three gores. The sleeves may be long or short. Cream and black striped serge will make up this garment delightfully.

The pattern, No. 6112, is cut in sizes 14, 16 and 18 years. Medium size will require 4 yards of 36-inch material, ¾ of a yard of 22-inch all-over and ¼ of a yard of 24-inch satin. Price of pattern, ten cents.

6068 Miss's Dress.—The frock given in the number closes at the front and has three-gored skirt made with empire or regulation waist line. The round neck is collarless and is finished with a frill of edging, ruching or plaited mull. The sleeves are short and have cuffs finished with trimming matching the collar.

The pattern, No. 6068, is cut in sizes 14, 16 and 18 years. Medium size will require 5¼ yards of 36-inch material, ⅜ of a yard of lace edging and 1¼ yards of plaiting. Price of pattern, ten cents.

6023 Lady's Skirt.—This skirt is a five-gored model. It closes at the front. The empire or regulation waist line can be used. This skirt can be used to complete a coat costume or it can be worn with separate shirt waists.

The pattern, No. 6023, is cut in sizes 22 to 30 inches waist measure. Medium size requires 2⅞ yards of 44-inch material. Price of pattern, ten cents.

6062 Child's Frock.—This dress may be made with high or low neck and with long or short sleeves. It fastens at the front and collar, cuffs and wide belt are made of contrasting material.

The pattern, No. 6062, is cut in sizes 2 to 8 years. Medium size will require 2½ yards of 36-inch material and ⅝ of a yard of 27-inch contrasting material. Price of pattern, ten cents.

6088 Boy's Blouse Suit.—A clever little blouse suit for the small lad is here presented. The blouse closes at the left side, but there are two rows of buttons giving a unique effect that is quite new. The sleeves are plaited at the bottom and the trousers, which are the regulation bloomers, are finished with leg-bands or elastics.

The pattern, No. 6088, is cut in sizes 4 to 12 years. Age 8 requires 3¼ yards of 36-inch material. Price of pattern, ten cents.

A PLEA FOR THE BETTER COUNTRY SCHOOL.

To the Editor of The Homestead:

The time has arrived when only a few doubt an education is essential in fighting life's battles successfully. The boy or girl who enters life with a good common-sense education has a thousand chances to make life a success where the uneducated has one. Now and then there is a farmer who says that he made a success without an education and if his child has grit he can do the same. That parent never stops to consider the fact that his child must live in a generation different from the one he has passed through. The demands will be greater and the competition more severe. That child must be more of a specialist than he has been. He has lived when the country was young and inhabitants few, but now his child must make his way in a well-settled country where land is higher and living more expensive. That child must know how to make two dollars out of the ground that produced only one for the father. So if the parent does not want his child to be simply a "hewer of wood and a drawer of water," he should see that the child has a trained intellect.

This naturally means the best possible education, which should be received as far as practical right at home in the public school. I am a firm believer in the idea that a child ought to get a good education in the public school. This opens the opportunity for the poor child as well as for the rich. It may mean more taxes, but the increase of taxes will be light compared with the expense of sending the child away to school. Many farmers object to better schools because they mean higher taxes. Of course such men would rather invest money in hogs and cattle than in the brains of their children. I am living in a school district where the school taxes are equal to all other taxes, but I figure that I am getting good return for the money in the intellectual training of my children. Our school is first class and is really a city school, but I live in the country and get the benefit of it. I feel that in putting this money into the brains of my children I am thus preparing them for life's duties, therefore, it is better than to hoard it up for them that they may have it after I am gone.

Now, in giving children an opportunity for an education a great many things are to be taken into consideration. The average country school in most states is far below what it ought to be. That is in equipment and class of teachers. Many of them do not have a map or reference book of any kind. There may be a Webster's dictionary, out of date and with the back torn away, lying on the teacher's desk, but outside of this there is not a book to which a child could go for reference when looking up a point on history, biography or government. No encyclopedia can be found in the school room, no library of any kind. The parent will sometimes object if the teacher asks for a few extra books for the child. Then a good map of the world should be hung in every school room. This keeps the child informed about the continents and nations of earth. The money spent in such equipments is not thrown away.

Often the school building is an old shack. A man would not use it for a corn crib if he had it on his farm. Doors are falling off their hinges and window lights are out while the plastering is dropping from the walls. The whole building and surroundings are unattractive to the scholars. I believe that a country school building ought to be the most attractive structure in the community. There should be sufficient acreage in the lot to give the children ample playground. This ground should be fitted up with swings, and all other up-to-date gymnastic equipments. The child needs to be developed physically as well as mentally. Then there should be plenty of shade under which the small children may play at noon and recesses. Here piles of sand may be placed for the amusement of the little fellows.

It should be the aim of the school board to hire the very best teacher possible. Right here I would state that a district cannot be too careful in selecting their school board. Often a man is chosen who has no children, is ignorant or mercenary. Such a character will not often be interested in a school. He will hire the cheapest teacher he can get nine times out of ten. But elect good, intelligent, liberal hearted men with growing families on your school board, and you will be most certain to get a good teacher even if the price is above what has been paid in the past. Such a school board will be a credit to any district and will make their school worthy the name of a public institution.

Again, patrons should make it a point to visit their school. It belongs to them, and they should be sufficiently interested in their children's education to visit the school, get acquainted with the teacher and receive suggestions from her or him as to how best to help the child. If teacher and parent work together for the best interest of the child, there will be results of which both may be justly proud. The school should also be visited by the board of directors. They should see that the teacher is doing his duty. By hearing him teach, they will know what kind of a person is over their children. The board that sees a teacher only through the eyes of the pupils is not a competent judge of the qualifications of that teacher. The teacher who is not doing his duty should not be hired again no matter if he is a relative of some neighbor, the son of a director, or will promise to teach for less pay the following year. I am sure it never pays to sacrifice the brains of the children for the benefit of some friend or the saving of a few dollars. A poor teacher may start pupils wrong, cause others to become disinterested, and lose valuable time for many whose years for mental development in the public school are very few.

When the day comes that every country boy and girl can get as good an education right at home as his city friend of the same age, I am certain that from the farms will go stronger men and women who will bless the world by their noble deeds.

THE BUILDING OF PERMANENT ROADS.

To the Editor of The Homestead:

I was born and reared in Highland county, Ohio. About the close of the civil war the legislature of Ohio passed a law known as the "Free Turnpike Law" which authorized any county to construct free pikes or macadamized roads, placing the power in the hands of the commissioners or supervisors of each county.

The law provided that the landowners along any proposed line of road, included in the limit of two miles, on each side of the road line may present to said board a petition for road improvement signed by a majority of the landowners within said limit. The board would then order a survey of the line, obtaining the grade, excavations and fills and the cost thereof as near as possible for grading. The bridges of certain dimensions were to be built by a county tax. After the cost had been estimated the board was authorized to advertise for bids on construction. The law required the contractor to give bond for the faithful construction of the road according to plans and specifications. The board then issued and sold bonds to an amount sufficient to construct the road and levied the amount on the land within the limits. The taxpayers on this line were granted a stated number of years to pay out, according to their wishes or a reasonable limit. This levy was placed upon record by the county auditor and known as pike No. 1, the pikes being numbered consecutively as they were built.

The four-mile law after a few years was changed to a two-mile limit. During the last few years it has been changed to one mile, the state paying a certain part of construction. During the last forty-five years Highland county, Ohio, has built more than sixty pikes under the different limits and no taxpayer would say "remove them." The first pike built in Highland county cost a fraction more than $5,000 per mile, but they are being built today for less than $3,000 per mile.

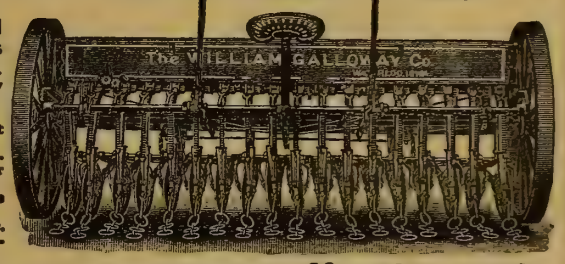
Let This Galloway Disc Drill Increase Your Crops 1/3 to 1/2

Write Galloway Today!

Note These Special Improved Features

Open Hearth Steel Frame.
Open Hearth Steel Draw Bars for Discs.
9-Inch Roller Bearings.
Discs made of the very best Coulter Steel.
Light Force Feed, sows accurately Flax, Oats or almost any seed.
Chilled Feed Shaft Bearings
Chilled Disc Bearings.
Malleable Main Castings.
And Many Other Important Improvements.



One of the Best Investments You Can Make

Write Galloway for Full Description, Prices, Terms, Etc.

This Galloway Disc Grain Drill has been improved and developed until it now stands head and shoulders above any other Disc Drill in the world.

Has Stood Severest Tests

We have put this Drill to harder tests than it will ever be called on to stand in actual service. For years it has been used on the Galloway Bros.-Bowman big Canadian Farm and on William Galloway's Iowa Farm, doing actual work putting in a real crop. That is the kind of test you can rely on because we crowded on to this drill more hard work in one season than a drill will get in ordinary use in four or five years. We wanted to bust the machine if we could and find if it had any weak points, but we found it so strong and durable that even the hardest work of the Northwest, where a drill must be built extra strong to stand up under the severe strain, will not affect it.

Our Guarantee and 30-Day Trial

We absolutely guarantee that these new Galloway drills are made of better material, have more exclusive and desirable features, are stronger and more durable and will stand up and give better service than any other line of disc drills ever made. We are perfectly willing for you to try one on your own place in any kind of soil, doing the hardest work you can put it to for 30 days. If at the end of that time you are not thoroughly satisfied that the machine is all we claim for it and by far the very best disc drill you ever saw, ship it back to us and we will refund every cent of your money and pay all freight charges.

Get the Big 144-Page Galloway Book of 1,000 Bargains

Full description of the Galloway Disc Drill Line is given in my Big Free 1913 Catalog showing everything for farm, home and family use. Hundreds of bargains that will save you real money. Don't fail to get your copy. Postal brings it Free.

Fine Prize Pony Given Away

You see in this picture a boy riding one of the splendid prize ponies I am going to give away. In other parts of the picture are the faces of several other boys. They are rather hard to find, but by turning the picture about you can see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send your name and address so I can tell you all about the contest in which you can win a beautiful pony and many other prizes.

1500 Votes Free

I will send you a special coupon good for 1500 votes toward the pony. All you have to do to get this coupon is to send your name and address at once.

A. M. Piper, 600 Popular Bldg, Des Moines, Ia.

NEWS OF THE SALE RING

The Isenbarger Angus Sale.

The sale of Isenbarger Bros. at Battle Creek, Iowa, on March 12th was well attended and they made a splendid sale, their average being $148. The top of the sale was their seven-year-old herd bull, Black King of Homedale, and he was purchased by W. L. Bleakly, Galva, Iowa, at $350. Eleven bulls in the sale made an average of $157.27. C. E. R. Fuester sold seven head of cows in the sale and he made an average of $128.57. The average on everything in the sale was $140.50. Col. Silas Igo cried the sale. Below is a list of all those selling for $100 and over:

BULLS.

Black King of Homedale, calved January, 1906; J. W. L. Bleakley, Galva, Iowa $350.00
Fairland Birtley 3d, calved July, 1911; C. H. Lohse, Schleswig, Iowa 195.00

35 head ..... 4,917.50; aver 140.50

The Healy Poland China Sale.

On Saturday, March 8th J. H. Healy, Manilla, Iowa, held his annual sale of Poland Chinas and obtained an average of $50.75 on the entire offering of fifty-six head. From the fact that they were all gilts of last spring farrow it must be considered a very satisfactory sale. The bidding was very brisk from start to finish and the local crowd secured the greater portion of the offering. Col. Harvey Duncan did the selling in his usual satisfactory manner. A list of a few of the tops are as follows:

1. Jacob Kruskher, Sowers, Ill. $72.50
2. W. E. Ruffcoen, Defiance, Ia. 75.00
3. F. M. Hheobold, Manilla, Ia. 60.00
4. W. E. Ruffcoen 60.00
5. J. C. Damitz, Underwood, Ia. 57.50
6. F. M. Theobold 60.00
7. Wm. Saunders, Manilla, Iowa 72.50
8. J. F. Morhauser, Prairie City, Iowa 70.00
9. Wm. Saunders 72.50
10. Wm. Saunders 65.00
15. E. J. Maland, Jewell, Iowa 67.50
16. A. B. Minor, Manilla, Iowa 60.00
17. A. B. Minor 60.00
28. Henry Jochmisen, Manilla, Ia. 50.00
30. J. C. Damitz 52.50
35. W. E. Ruffcoen 52.50
45. Henry Jochmisen 50.00
46. Wm. Saunders 60.00
53. Wm. Saunders 60.00

James Lawler's March Sale.

Prevented from selling his annual offering of bred Poland Chinas on the day first scheduled, February 22d, James Lawler sold at his farm near Clare, Ia., on Wednesday, March 12th. Mr. Lawler has one of the good herds of this section of the state and his offering of bred sows was individually among the top ones of the season. Although his average on fifty-one head was approxiy $46, a good figure for a late sale, it was evident that the lateness of the farrowing date made a serious difference in demand. Mr. Lawler has a trio of herd boars that are a credit to his judgment and are not easy to duplicate in excellence of type in any herd. His sows have size, but with it smoothness and finish, and many of them went through the sale at the bargain prices of the winter. Col. J. A. Benson cried the sale and worked hard for its success. The following is a list of the buyers at $40 and over:

1. Dan Halligan, Clare, Iowa $63
2. F. M. Zenor, Woolstock, Iowa 60
3. Wm. Nall, Britt, Iowa 66
4. John A. Behrens, Ft. Dodge, Iowa 59
5. John A. Behrens 59
6. Harry Frasier, Gilmore City, Ia. 52
7. Chantland Bros., Badger, Iowa 70
8. Steinbrink Bros., Manson, Iowa 59
9. J. M. Hood, Clare, Iowa 49
10. W. W. Cissny, Clare, Iowa 45
11. Harry Frasier 44
14. F. M. Zenor 56
15. Wm. Condon, Clare, Iowa 40
17. W. W. Cissny 40
19. W. W. Cissny 42
20. A. W. Taylor, Gilmore City, Ia. 51
21. J. M. Hood 47
22. Richard Allen, Clare, Iowa 40

The O'Hern Poland China Sale.

At Cottageville Farm, Barnum, Iowa, on March 11th, a splendid sale of purebred Poland China sows and gilts was held by M. F. O'Hern. The guests were all invited to a good lunch and then were asked to the sale tent, where Col. F. F. Luther made some excellent remarks in reference to the animals offered. The first sale made was No. 3, Tecumseh Lady 3d 430270, a sow out of a litter of seven, tracing to Perfection Look 123143 and Tecumseh Lady 390818. Sam Ness, Roslyn, Iowa, secured her for $43. The top liners of the sale were bought by John Behrens, Ft. Dodge, Iowa, O'Hern's Queen the Great and O'Hern Queen, both tracing to Standard Chief the Great. They had the size and quality and will be a valuable addition to Mr. Behren's herd. There were plenty of other good showings and as a whole the offering was a good one. This is Mr. O'Hern's first sale of the kind and he is to be congratulated. The average on forty head was better than $37. We give below a list of sales over $30:

1. John Behrens, Ft. Dodge, Iowa $62
2. John Behrens 60
3. Sam Ness, Roelyn, Iowa 43
4. Mr. Clarkins, Tara, Iowa 41
5. Sam Ness 42
6. A. H. Wyatt, Summers, Iowa 44
8. M. F. Byrnes, Barnum, Iowa 41
9. W. J. Crilly, Barnum, Iowa 40
10. Frank Halligan, Barnum, Iowa 42
12. W. J. Crilly 40
13. John Owens, Barnum, Iowa 42
14. L. Frank, Barnum, Iowa 41
15. W. J. Crilly 46
16. M. F. Byrnes 40
17. A. H. Wyatt 44
19. Pat Burns 40
20. M. F. Byrnes 39
21. Sam Ness 38
28. M. F. Byrnes 40
32. J. F. Gurnett, Barnum, Iowa 35
38. John R. Tracey, Barnum, Iowa 32

The Larson Duroc Sale.

The sale of O. S. Larson at Logan, Iowa, held some time ago, was one of the best of the winter season and the sows bred to King The Col. made an average of $103, and those sired by him made an average of a little over $100. The top of the sale was a King The Col. gilt that went to Harry Browning at $177.50. Colonel Kraschel cried the sale. Below is a list of the entire offering:

2. Emmett Manley, Lyons, Neb. $110
1. Barker Bros. & Crowell, Riverton, Iowa 132
3. S. W. Swanson, Stanton, Iowa. 132
4. P. W. Weberg, Denison, Iowa. 80
24. Harry E. Browning, Hersman, Ill. 177
26. Emmett Manley 92
25. V. L. Gaston, Malvern, Iowa.. 67
10. Joe Seddon, Persia, Iowa 77
6. R. G. McDuff, Monroe, Iowa... 117
14. W. H. Seddon 87

The K-R-I-T Idea of Value.

The K-R-I-T is up to date in every point of design and equipment, but these are not the qualities which are most necessary. You, Mr. Farmer, must have a car which will give you daily and satisfactory service the year around and this can only be obtained from a car of proper design which has been built by skilled workmen from the best of materials.

These are the very qualities which lift the K-R-I-T out of the $1,000.00 class. Send for our latest catalog which is fully descriptive of K-R-I-T cars and contains illustrations of all models and working parts. Study carefully the design and quality of materials used in the K-R-I-T, note the ball bearing unit power plant with "en bloc" motor, generous size of crank shaft, chrome nickel transmission gears and the aluminum transmission and crank cases which not only add to the strength of construction but reduce the weight. The axle and springs are made from Vanadium Steel and the steering arms from Chrome Vanadium.

These are only a few of the many K-R-I-T features which spell K-R-I-T Value. Write us for the name of your nearest dealer who will be glad to give you an opportunity to try the K-R-I-T on your own roads without placing you under any obligations.

Seddon's Duroc Sale.

The sale of Will Seddons, Persia, Ia., was one of the best of the winter season and he disposed of forty-three head at an average of $63.78, the top being No. 2, that went to Fred Swan at $170. The offering was in nice shape and the range of prices was very even. Colonel Kraschel cried the sale. Below we list those selling for $40 and over:

1. Geo. Davis, Milford, Neb.....$100
2. Fred Swan, Missouri Valley, Neb. 170
3. Geo. Gawley, Irwin, Iowa..... 75
4. C. A. Deval, Inwood, Iowa.... 85
6. Samuel Bloomer, Hardwick, Minn. 65
7. R. G. McDuff, Monroe, Iowa... 100
8. A. J. Deuer, Milford, Neb..... 75
9. Wm. Taylor, Ireton, Iowa..... 75
10. S. W. Swanson, Stanton, Iowa. 142
12. Peter Pringle, Shelby, Iowa.... 50
13. E. E. Handley, Carroll, Iowa.. 75
14. Emmet Manley, Lyons, Neb... 75
15. O. R. Stevens, Rippey, Iowa... 60
16. Peter Zolk, Persia, Iowa..... 70

Thurer's Poland China Sale.

C. L. Thurer, Fostoria, Iowa, held a very successful sale of Poland China brood sows on March 11th. While the weather conditions were not favorable, an average of $45.50 per head was made on the entire offering. Prices were even from the start, with a top of $75. Below we give a list of the animals sold:

15. Geo. Adams, St. James, Ia...$60.00
33. John Amundson, Milford, Ia. 48.00
34. Barth Fritz, Fostoria, Iowa. 41.00
38. D. H. Borchers, Charles City, Iowa. 40.00

25. P. J. Weber 36.00
27. P. J. Weber 38.50

Holst's Chester White Sale.

John Holst, Denison, Iowa, made his annual public sale of Chester White sows on February 27th, and obtained the excellent average of $58 per head on the entire consignment. While this is the highest average of the season made at a sale of this breed, it was the consensus of opinion of those present that the animals were entitled to the recognition given them. Below we give a list of those sold for $60 or over:

1. J. R. Harvey, Denison, Iowa...$77
2. Matt Arnold, Denison, Iowa... 91
3. J. R. Harvey 48
4. J. J. Hawthorne, Lake View, Ia. 67
5. F. W. LaDoux, Spirit Lake, Ia. 81
6. Jacob Greder, Denison, Iowa... 80
7. Matt Arnold 65
8. J. P. Walsh, Elk Point, S. D.... 71
9. C. J Eatinger, Orient, Iowa..... 77
10. H. M. Childress, Deloit, Iowa.. 65
15. Peter D. Bouchard, Jefferson, S. D. 74
16. J. L. Barber, Harlan, Iowa..... 79
17. Matt Arnold 67
19. Matt Arnold 61
20. J. L. Barber 90
24. J. P. Woodruff, Denison, Iowa.. 61
37. Jacob Greber 69

Madison Spencer's Duroc Sale.

On February 24th, Madison Spencer, Audubon, Iowa, made his annual sale of Duroc Jersey brood sows. The average on the entire offering was $38 per head and would undoubtedly have been much higher had not the Rock Island train from Atlantic to Audubon been stalled so that quite a number of breeders could not get to the sale. Colonel Kraschel did the selling and put forth every effort to make the sale a success. Below will be found a list of a few of the tops:

1. Frank Buchner, Gray, Iowa....$45
3. Peter Nelson, Audubon, Iowa.. 40
6. J. Andreason, Audubon, Iowa.. 34
9. Wm. Waukenshaw, Griswold, Ia. 50
15. Peter Nelson 42
16. J. K. Code, Manning, Iowa..... 49
17. W. H. Seddon, Persia, Iowa.... 54
18. J. B. Ashby, Audubon, Iowa... 44
19. Geo. Everett, Audubon, Iowa... 40
21. Lester Johnson, Audubon, Iowa 39
22. J. H. Trummer, Anita, Iowa... 39
23. M. E. Jenkins, Brayton, Iowa.. 38
28. W. W. Scholls, Onawa, Iowa... 38
31. Frank Desmond, Atlantic, Iowa 40
35. Geo. Law, Audubon, Iowa..... 38

Roan's Jack and Jennet Sale.

The sale of jacks and jennets held by J. C. Roan, La Plata, Mo., on March 10th, was a success from every standpoint. Mr. Roan had finished for this sale the first sale pavilion built by any jack breeder for holding his annual sales and it was crowded with the 800 or 900 people in attendance. Iowa, Illinois, Kansas and Missouri buyers took the offering at prices that justified Mr. Roan in going to the trouble and expense of giving them an opportunity of selecting from a number of head. Prices ruled strong on the better class of matured stock, but no high prices were paid and all got good values in stock that was sold under a guarantee to be just as represented. The top on jacks was $1,300, paid by R. E. Webb, Belmond, Iowa, for the two-year-old Clover Leaf Judge, one of the best two year olds Mr. Roan has ever sold. W. A. Newkirk, Kiowa, Kan., secured a bargain in the three-year-old jack, Clover Leaf Jack, at $1,250. Had Mr. Roan had more aged jacks his sale would have gone on record as one of the best held this year, as he had buyers for more of this class of stock than he had listed. Col. P. M. Gross, Macon, Mo., did the selling and much credit is due him for the manner in which he handled the sale. His knowledge of the horse and mule from a market standpoint is not excelled by that of anyone in the business and his timely remarks added many dollars to the total of the sale. Following is a list of sales of all animals selling for over $100. A few jennet colts sold below this figure:

JACKS.

Clover Leaf Judge, two years; R. E. Webb, Belmond, Iowa.....$1,300
Clover Leaf Chief, three years; W. A. Newkirk, Kiowa, Kan..... 1,250
Henry Sullivan, five years; J. M. Proctor, Braymer, Mo..... 775
Bourbon J. C., two years; J. M. Proctor 400
Gabe W., five years; Wayne Davis, New Boston, Mo..... 510
Black Brigham, two years; C. M. Moffatt, Rutledge, Mo..... 110
Prince Monarch, six years; W. L. Wheeler, Quincy, Mo..... 765
Monarch George, three years; O. C. Bandle, Bloomfield, Iowa..... 690
Black King, seven years; C. A. Nelson, Nevada, Iowa..... 900
Black Pete, two years; R. R. Jackson, Worthington, Mo..... 100
Lofty Joe, two years; Gus Pence & Son, King City, Mo..... 900
Joe Davis, two years; B. Romjue, Atlanta, Mo. 420
Kentucky Joe, two years; Wayne Davis 600
Ravenwood 2d, four years; R. W. Jackson, Worthington, Mo..... 120
Bourbon A., two years; C. R. Porter, Novelty, Mo..... 500
Senator LaFollette, eight years; Fay Thompson, Sioux City, Mo. 770
Poor Kruger, eight years; D. R. Pefflnger, Washington, Ill..... 470
Honest John, six years; E. A. Glmple, Mankato, Kan..... 600
Prince Roy, two years; Thos. McCue, Sterling, Ill..... 315
Admiral, seven years; Harrison Epperson, Elmer, Mo..... 340
Yearling jack colt; William Wilkerson, La Plata, Mo..... 250

JENNETS.

Jersey Lilly 2d, nine years, and jack colt; Wm. Shaughnessey, Rothville, Mo. 490
Clover Leaf Jude, eight years; Gus Pence & Son..... 390
Nellie Searchlight, five years; Gus Pence & Son..... 430
Queene Annie, five years; C. F. Morton, Union, Neb..... 135
Juno, five years, and jack colt; J. E. Davis, New Boston, Mo..... 545
Jack colt; Deierling & Otto, Queen City, Mo. 380
Legal W., seven years; J. E. Davis
Black Belle, five years; C. F. Morton 165
Lady Taxpayer, five years; J. E. Davis 130
Fannie G., six years; Tom Davis, New Boston, Mo..... 150
Black Jennet, six years; Gus Pence & Son..... 275
Clover Leaf Sparkle, three years; Amel Gustafason, Ethel, Mo..... 170
Clover Leaf Daisy, five years; Kern Bros., Alexander, Mo..... 155
Clover Leaf Jane, two years; Amel Gustafason 100
Lou, ten years, and jack colt; C. A. Nickerson, Bucklin, Mo..... 205
High Stile Queen, six years, and jennet colt; C. A. Nickerson..... 235
Suffragette, two years; Herman Carr, Brookfield, Mo..... 195
Nancy R., eleven years; James Johnson, Elmer, Mo..... 125
May Bird, seven years; C. F. Morton 105
Early Queen, six years; Rube Wainscott, Jackson, Mo..... 125

SUMMARY.

21 jacks ..... $12,085; aver..... $575.47
24 jennets ..... 5,030; aver..... 209.58
45 head ..... 17,115; aver..... 380.33

Keep all the tanks and water troughs about the farm equipped with plugs that will admit of letting out all surplus water left in them by the stock these snappy nights. It will save you a lot of hard work in useless ice chopping every morning, prevent the stock from chilling their bodies with ice cold water, made so by the ice in the troughs, and the precaution may be the means of saving a good tank or trough from bursting by excessive freezing of the water left in them. Aim to gauge your supply, however, so that little will need to be let out, as it makes a sloppy place around the well, or a glare of ice when the weather is cold.

This Is Every Farmer's Fight

This is a message from the thousands of American farmers who raise sugar beets, the manufacturers who convert the beets into sugar, and the many thousands of workingmen who find profitable employment in the beet sugar industry. It is a message of great importance to *you*—and to every farmer in America.

War is now being waged by the Sugar Trust against the Beet Sugar Industry of America. The Sugar Trust seeks to **completely wipe out** the Beet Sugar Industry in order that they may absolutely control the sugar markets of this country and juggle prices as they see fit. They aim to accomplish their purpose by having the tariff on sugar reduced or removed. By strangling the Beet Sugar Industry, **their only competition,** the Sugar Trust hopes to exact heavy toll from **you** and every other user of sugar.

This is a matter of mighty import to **you**—and every other farmer and landowner in America. It **demands** and **deserves** your careful, sincere consideration **—at once.** If the Sugar Trust succeeds in its efforts the **government will lose millions of dollars** in revenue annually, which will increase direct taxes throughout the United States; it will give the Sugar Trust **absolute control** of the American sugar markets and later place them in position to raise the price of sugar as high as they want to. The Sugar Trust sends millions of American dollars abroad every year for sugar—the beet sugar industry **keeps the money at home,** benefiting thousands of American farmers, coal miners, machinists and workingmen in many different lines. **Reducing the tariff will benefit only the Trust** and the big importers—it **will not** permanently lower the price of sugar—no more than did the removal of the tariff on coffee reduce the price of coffee.

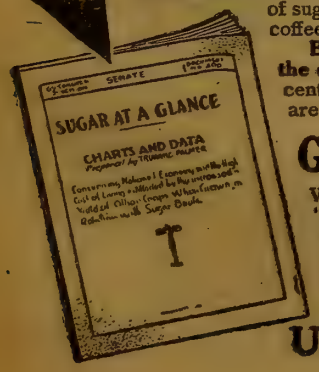
Beet sugar production can be developed to supply the entire demand of this country. It increased 1500 per cent since the present tariff was enacted in 1897. There are now seventy-two beet sugar factories in the United States, located in 16 states, extending from Ohio to California, and owned by 39 independent concerns. Maintaining the present tariff will protect this growing industry and benefit thousands of farmers who supply the factories with sugar beets.

The price of sugar has steadily decreased since the advent of beet sugar. Further development will reduce the cost of manufacture and further reduce the price of sugar to the consumer. It will retain in this country and give to farmers immense sums of money that are now sent abroad for the purchase of foreign sugar.

The Beet Sugar Industry **needs** the existing Tariff Protection because it is only partly developed—and because farm and factory wages in all other sugar producing countries are less than one-half of the wages for the same work in this country.

By prompt action, in filling out and mailing coupon below, you can do a good turn for thousands of farmers, manufacturers and workingmen—and incidentally help to keep the price of sugar **down.** By **delay,** or **neglect** of this important matter, you will help the Sugar Trust **crush** a great American industry, **exact heavy toll** on every pound of sugar sold to the American people, wipe out a large portion of the Government's revenue and increase **your direct taxes.**

We cannot believe you have any intention of helping the Sugar Trust, or increasing **your own taxes,** therefore you should sign and mail the coupon **at once.**



Get this Free Book Which Gives You All the Facts

We want to send you, FREE, a copy of U. S. Senate Document No 890, entitled "Sugar at a Glance," which gives you all the facts about the sugar industry; it also tells how you can increase the fertility of your land by growing sugar beets. Send for the book **now**—you can then judge the case clearly and help build up the beet sugar industry of the United States by following the plan outlined to you. Fill out and mail the coupon **at once** before it gets lost.

UNITED STATES BEET SUGAR INDUSTRY

TRUMAN G. PALMER,
Sec'y, United States Beet Sugar Industry,
Washington, D. C.

Please send me the free book—"Sugar at a Glance"—which tells all about the beet sugar industry and explains how I can increase the fertility of my land by growing sugar beets.

Hog losses by disease last year amounted to nearly $50,000,000.00—nearly twice as great as in any other of the last ten years. Your neighbors right and left have been losing their hogs. If yours are ailing today, look out for tomorrow. Death is in the air and it will rob you of your best profit maker.

The trouble is not Hog Cholera, but worms. No hog dies of disease that hasn't got worms. **WORMS really kill 90% of all hogs that die. COLUMBIAN STOCK POWDER** positively expels and destroys worms and **prevents** hog losses. If your hogs are sick it will **save** them. If they are well it will **keep** them thrifty and safe. Costs you **only a few cents per head a month to feed.**

AGENTS WANTED
We have an interesting money-making proposition for men of ability and good standing in every community. Write for particulars, giving references, TODAY.

Columbian is the **original** stock powder—**the only sure remedy**; used and endorsed by thousands of leading stock raisers.

NOT A FOOD, but a medicated preparation, scientifically compounded to expel worms and **Keep hogs healthy.** Restores their digestive powers; makes them grow faster and fatten on 25% **less feed.** Stops thumps, scours, coughing, fever, indigestion, and prevents all disease.

MUST BE FED TO BROOD SOWS, for best results with pigs. Keeps the sows healthy and vigorous, free of fever, makes the milk flow purer and more abundant, insures strong, thrifty litters and **prevents runts.**

A BIG SPECIAL FREE OFFER, never made before—you can't afford to miss it—means dollars to you if taken advantage of at once. Try **Columbian Stock Powder** 90 days before you pay. Write at once stating how many hogs you have.

Columbian Hog & Cattle Powder Co.,
1450 Genesee St., KANSAS CITY, MO.

COLUMBIAN AUTOMATIC FEEDER FOR HOGS

Wool Growers, Beware of the Tariff "Bugaboo"

Don't let this *tariff talk* scare you. Even though the tariff is being revised, you will get a good price for your clip, *provided you sell at the right time.*

To take care of our customers during this season of surprisingly quick-changing prices, we are going to send FREE Special Market Reports *frequently*, from now till September. These Special Reports will be authentic and reliable, being based on our 47 years experience, during which time we have become one of the biggest wool merchants in the world.

By watching our Reports closely, our customers can pick the best time to sell. Last year our customers made an average of 2c to 3c per pound more for their wool by following our advice. *This* year they will profit *even more*, as a result of our Special Reports.

Now, if you have as much as 200 pounds of wool, you can have your name put on our mailing list. You'll get our Special Reports, free, *all through the season.* You won't make the mistake of selling at the *wrong* time, or of selling to some buyer who, on account of the tariff agitation, is afraid to pay you the market price, or will scare you into taking less than the market value.

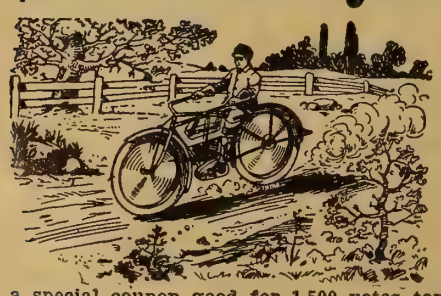
Remember, we charge nothing for this service. We place you under no obligation whatever. We must print about 50,000 Reports anyhow for our old customers. It's no particular trouble to print a few hundred extra for other wool growers.

Merely send us your name on a postal. Then, every time we get out a Special Market Report you will be remembered. You certainly can't *lose* anything by watching our Reports, and they may be the means of saving you a lot of money—*good, hard coin that rightfully belongs to you.*

This is no season to be selling wool to any old buyer at any old time. GET POSTED. If you send your name on a postal *now*, you'll get some interesting Wool News by return mail. (12)

S. SILBERMAN & SONS, Desk 27, 1117 W. 35th Street, CHICAGO, ILL.

$250 Motorcycle Given Away



YOU SEE in this picture a boy riding one of the $250 Excelsior Motorcycles we are giving away. In other parts of the picture are the faces of several other boys. They are hard to find, but by turning the picture about you will be able to see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send me your name and address, for I will tell you all about the contest in which you can win the seven-horsepower motorcycle and many other prizes.

1500 Votes Free I will send you a special coupon good for 1,500 votes toward the motorcycle. All you have to do to get this coupon is to send your name and address at once.

Echoes From a Kansas Farm

BY HENRY HATCH

What happens with those who believe in signs when Good Friday falls in the wrong time of the moon for planting potatoes?

The c. o. d. feature of parcel post which goes into effect the first of July will prove handy when we wish to order repairs for machinery direct from makers, but do not know the amount of money to send. We can order the repair and pay the mail carrier when it comes.

Encouraged by the good oat crop of last year, the acreage will be increased in this locality this year. It may also mean the increase of the chinch bug population.

It will soon be time to burn grass and trash to kill chinch bugs. However, wait until warm weather thaws them out and brings them to the surface, or the fire will sweep over them with little injury. Burning in February and early March, as some "city" authorities advise, is the best way not to kill the bug, except not burning at all.

Township assessors are making their rounds. Most of these men are farmers, and they have been putting in full time lately, since the surplus of moisture prevents farm work. They find muddy roads, but it isn't far between stops, and at some places it takes a long time to bring to light all taxable property.

They are getting after the steel bridge trust in this state. A bill has been passed making it compulsory for county commissioners to state the "style" of bridge wanted at the time bids are called for. In the past the different bridge companies put out what they term "their style," and since it is generally known that they have the territory divided and do not really compete, except in mockery, they get around actual competition by the quotation of prices on "their style." The law passed will compel the commissioners to state the "style" wanted, and all companies will have to bid on the one "style."

There is no question but what there is a great graft in the steel bridge business. A little of it has already been uncovered, but it is likely that much of it never will be brought to light. Facts enough have already been brought out to convince the people that there is a "bridge trust" and that the price is fixed by them, regardless of the sham competition they put on when commissioners call for bids. We have got to cut out all graft in the purchase of bridges and road-making machinery, where there is such graft, if we would get full returns from our road tax.

One of our neighbors was a member of the township board in his township, a few years ago. He tells us he got letters from the makers of a certain road grader, offering him a choice of a number of "premiums" if he would see that his board purchased their make of road grader. As one of the "premiums" was a full set of carpenter tools, valued at no less than $35, it will be seen how even township boards are tempted by graft. Of course, where "premiums" are accepted, the price comes out of the tax payers.

As the saying is, this is more like weather. The past two days have been springlike, and, coaxed out by a bright sun and a gentle southern breeze, a little of the surplus moisture is leaving us. Another day of it will put the roads in shape for dragging, and if the township boards wish to get the most out of their road money, they will see that a great deal of dragging is done. Every grade that has been traveled to amount to anything—and the annual moving time has made use of almost every mile of road there is—has been badly cut up, and as the roughness dries the drag will push as much dirt into the center of the grade as is usually put there by one cut of the grader, and at a great deal less expense.

The more conservative are asking this question—when will the advance in the price of live stock come to an end? The more pessimistic are predicting a "grand slump" when the advance does end. It really is troubling some of the pessimists that a new administration has come into power without a slump in prices. Some act as if they feel bad because a panic hasn't taken place.

Once upon a time a neighbor of ours was told by a doctor that he could not live longer than a year. That was years ago, and the neighbor is still alive and hearty, but for a long time afterwards, so the neighbor says, that doctor acted as if he was mad because his patient didn't die, as he told him he would. Likewise, there are men who appear mad that the change in administration didn't bring on a panic, as they predicted it would.

There is even some science in using tin cans as flower pots. W. R. Lanxon, of the North Dakota Agricultural college, tells the housewives to punch the bottom of the can full of holes with a spike, then put in an inch layer of coarse gravel, pieces of coal or broken crockery, fill with one-third leaf mold and two-thirds soil. Well-rotted manure may be used in place of the leaf mold. Plants like geraniums, begonias, fuchsias, dwarf roses and flowering maples are very satisfactory.

Make Extra Dollars

Cut out the cost of some hired help by using a

Rumely Automatic Baler

It is the fastest and best baler, the only real automatic one on the market.
Run it with a

Rumely-Olds Engine
6 h.p. or 8 h.p.
Mounted on the baler truck

This engine has a reputation—simply fill and start. It runs itself, adjusts itself—any load.

Use this combination and bale your hay faster and better than you ever did before.

The Rumely-Olds comes in every convenient size, and can be used all over the farm on a hundred jobs. Portable, Stationary and Skid-Mounted. Baler comes in sizes to fit your requirements.

Write for Data-Book, No. 344, on the Rumely-Olds Engine, and Data-Book, No. 245, on the Rumely Automatic Baler. Ask for name of nearest dealer.

THE LAWN.

To the Editor of The Homestead:

In the surroundings of a house the one important thing to consider is the lawn. Whether it is a small front yard or an extensive park the foundation, the setting of all other ornamentation, is the grass. Let this be good, it is of itself an object of beauty, but let it be poor and no expense in trees, plants, etc., will compensate for the lack of it.

In small places such as yards it is often more satisfactory to lay turf. If this be done or seed is sown complete success requires the soil to be thoroughly prepared. The work is done for years and must be well done. No crop requires better drainage, more abundant manuring, more thorough working of the soil and careful sowing than the lawn. After the surface is properly graded the soil should be as thoroughly prepared as for a garden and then sown. We prefer blue grass with white clover for a covering for the lawn. Three bushels of grass seed with a quart of white clover seed to the acre is sufficient.

We have no specific directions as to the setting of the ornamental trees, each place must be treated according to its own requirements. We prefer a fair proportion of evergreen and deciduous trees, but remember that small trees, will soon become large. Do not plant just the same kinds and in the same manner as your neighbor. We think the ordinary maple cannot be surpassed for lawn purposes although the horse chestnut or even the oak leaved mountain ash are excellent trees. Weeping trees may be used with fine effect. The weeping birch or weeping willow together with the weeping poplar are among the best for trees of low growth. Evergreens may be made useful as well as ornamental by planting where they will break the cold winds. Among all the choice collections we have found nothing finer than a well-grown hemlock. It can never be called "common." If a screen is the main object we would select the Norway spruce and arbor vitae with the hemlock on account of the rapid growth, while merely for ornamental purposes the dwarf arbor vitaes and dwarf pines make charming lawn plants.

Deciduous shrubs are indispensable and one who notices native plants will have no difficulty in making a highly ornamental collection from those which grow wild in our woods. However, many prefer to buy these and there are many choice kinds to select from, among which are the lilac, the snowball and flowering quince, mock orange and a variety of others which make the lawn beautiful, while among the evergreens already suggested we must not forget the laurel which is one of the best. The grouping of shrubs to produce a pleasing effect should be borne in mind. They should never be trimmed into formal shapes, but the natural habit of each one consulted when cutting is necessary.

Fine specimen plants may stand alone upon the lawn or groups of the same kind or of different kinds so placed. In setting trees and shrubs the matter of planting out should be observed. Trees and even shrubs may be so placed as to cut off from view objects on one's own place or that of a neighbor which it is desirable to hide. The soil should receive the same careful preparation as in the case of those trees which bear fruit. All evergreens, except those used for screens, should have ample room to develop. An evergreen with branches to the very ground is far more beautiful than one which has been trimmed up.

Mrs. S. E. McCoy.

Illinois.

POINTS ON POTATO GROWING.

Potatoes are grown to eat. Most growers have never thought of this fact. They have raised potatoes to sell and have considered only the market price and the yield they could get. They have not realized that the more delicious the cooked potato tasted and smelled and the less waste there was in preparing it for the table, the higher would be the price.

A potato should be white, mealy and dry when cooked. The flavor should be delicious, the odor so appetizing, when such potatoes are served, every one should want a second helping and like to have potatoes often.

More than half the potatoes grown in the central West are soggy when cooked, the odor and flavor are indifferent and often there are yellowish or brownish streaks through them. Few people want a second helping and there are too many meals when potatoes are not served because nobody cares much for them.

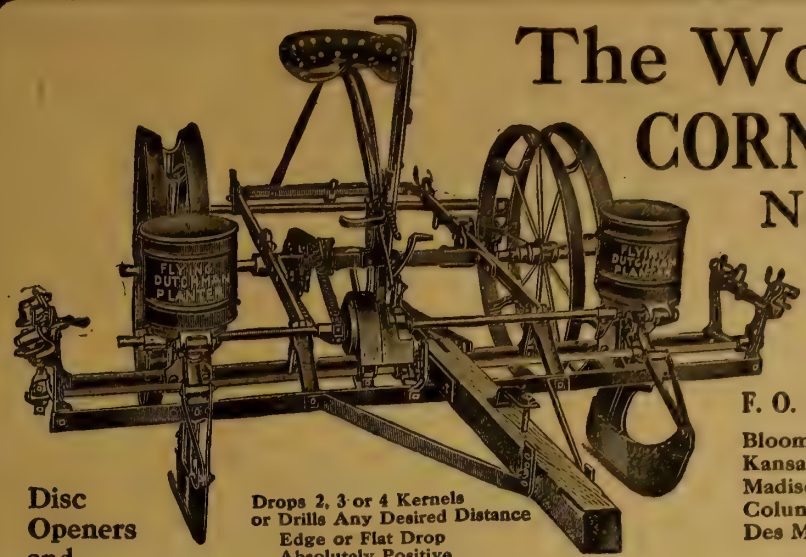
The potato grower more than any other grower of farm food products has overlooked the preferences and tastes of his customers. The consumption of potatoes can be largely stimulated by raising those that are delicious in flavor and aroma, appetizing in appearance and that waste little in preparing for the table.

The yield of potatoes on many farms is too low to be profitable except when prices are high. The low yield is chiefly caused by planting seed from low-producing hills.

A potato does not produce a crop like itself, it produces a crop like the hill from which it came. With the ordinary method of selection, seed potatoes from the poorest hill and a part of the potatoes from the moderate producing hills are used. Not a potato from the highest yielding hills is planted. Intelligent selection of seed from high-yielding hills will double the yield on more than half the farms.

H. M. Cotterell.

"The steer that gets crosswise in the loading chute," H. F. McDougal, the Maryville (Mo.) Tribune's philosopher, points out, "may attract the most attention, but it doesn't make any better beef than the rest of the herd."



The World's Best CORN PLANTER NOW $35.00

F. O. B. Factory or Our Warehouse at

Bloomington, Ill. — Indianapolis, Ind.

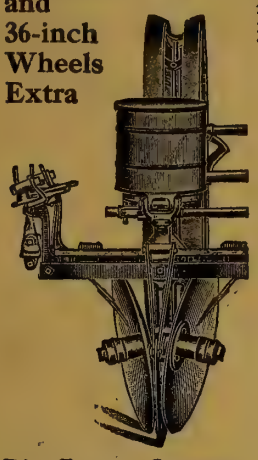
Disc Openers and 36-inch Wheels Extra



Disc Furrow Openers can be had if desired at a small additional cost.

Drops 2, 3 or 4 Kernels or Drills Any Desired Distance
Edge or Flat Drop
Absolutely Positive
Perfectly Accurate
2 Full Sets of Plates

No matter how much you pay for a Corn Planter, you can't get as good a Planter as the Flying Dutchman, which now sells for $35.00 Cash. For accuracy of drop, durability and general satisfactory work you can't equal it at any price.

The reason why we can make this extremely low price is that we figured that could we double the output of our Planter department, we could materially reduce the manufacturing cost. This we have accomplished and have kept this department running continuously since corn was planted last year, while most other factories were shut down. We are now giving YOU the benefit of our saving in the cost of manufacture.

"The Planter Without A Fault."

The Flying Dutchman Planter is known by the army of farmers who are using it as "The Planter Without a Fault." It actually gives faultless service, year after year under any conditions.

It drops 2, 3 or 4 kernels in a hill with positive and unvarying accuracy and can be instantly changed from one to another while the planter is in motion, thus planting the proper number to meet varying soil conditions—insuring a big crop.

No matter how slow or how fast you drive, the seed is always dropped in perfect check and never scattered.

It is very simple in construction—a small boy can easily understand it—not a thing to get out of order or cause delays—always accurate and ready for use.

It is so well made that it will last longer and give better service year after year than any other planter.

Edge drop or flat drop—whichever you prefer—can be changed instantly by simply changing the plates or can be instantly changed to a Drill without the driver leaving his seat.

If you pay more than $35.00 and freight for a Corn Planter you are simply throwing money away because you can't equal the Faultless Flying Dutchman at any price.

Write today for our FREE BOOKLET showing Planter in colors.

"Farmers' Pride"

A General Purpose Saddle That Fills Every Need. Special Price for March and April **$9.67**

Seldom is an opportunity offered to buy a good saddle at a low price, and never has so fine a saddle as our "Farmers' Pride" been offered at anywhere near the price we are quoting. Just another example of Sears, Roebuck and Co.'s policy of distributing dependable merchandise at prices based on production cost plus **one** profit.

This is the way we make it:

TREE—13½-inch, Morgan style, steel fork and horn; sheepskin covered bars, making the saddle easy on the horse's back.
SKIRTS—21 inches long.
RIGGING—Double cinch rigged, with 1-inch tie straps to tie; 4-inch soft hair cinches.
SEAT—Half leather covered, roll cantle.
STIRRUP STRAPS—1⅛ inches wide, full length, to buckle, fenders, 6½ inches wide, 13½ inches long, attached; 3-inch Texas bolt stirrups.
Weight of saddle, about 13 pounds; packed for shipment, about 20 pounds.

No. 10W3513021/4 Price.....**$9.67**

Send us an order for either or both of these items and we will ship promptly. Your money back if you are not pleased. Take advantage of these low prices now, as hides are scarce and leather is steadily advancing in price. This is an opportunity that will not be presented again. Our complete line of exceptional values in harness, saddlery and accessories is shown in our beautifully illustrated 80-page Special Harness Catalog. Write "Harness" on a postal card, sign your name and address and we will mail you this catalog postpaid. Act now and send us an order and save money.

Our "Mansfield" Farm Harness is still another money saving bargain in a strong, serviceable double farm harness worth almost twice the price we ask for it. Following are the specifications:

BRIDLES—⅞-inch short cheeks, round side reins, sensible blinds, nickel spots.
LINES—1⅛ inches wide, 18 feet long.
HAMES—Wood, iron bound, square staple; Moeller hame tugs, jointed Concord clip attachments; 1½-inch breast straps and martingales, with collar straps.
TRACES—1¾ inches wide, Moeller clip cockeyes.
TRIMMINGS—XC buckles.
Weight, packed for shipment, about 80 pounds.
No. 10W35567¼ Price, without collars..... **$32.79**

PADS—Flat harness leather, felt lined; drop hooks and terrets; nickel spots; folded bellybands; 1⅞-inch hip and back straps; scalloped safes, cruppers buckled on; Cooper's trace carriers, nickel spotted on outside.

A BARGAIN ONLY **$32.79**

We guarantee this saddle or harness to give you satisfactory service.

The Ever Welcome Smoke

Ever see a man who wasn't glad to get a pipeful of

Velvet
THE SMOOTHEST TOBACCO

If he doesn't already know Velvet, he soon learns that it is the best tobacco anyone can ask for.

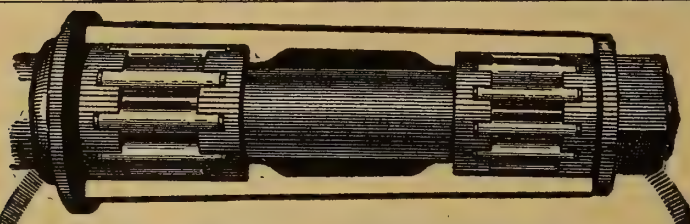
2-ounce tins - - 10c.

Also in one-pound glass humidor jars.

His face will light up with pleasure when he lights up a pipeful of this refreshing "no-bite" Velvet.

You want the best tobacco going—something you will enjoy and be proud of. So slip a tin of Velvet into your pocket today. Your dealer keeps it.

Liggett & Myers Tobacco Co.



A New Invention

That Will Save Millions to Farmers

How much would it save if every farm wagon in the United States could do one-third to one-half more work? How much would **you** save if your wagon did that?

The latest improvement in farm wagons—the greatest in 50 years—is the improved and perfected Peter Schuttler Roller Bearing.

Peter Schuttler
Roller Bearing Wagons
Do One-Third More Work and Do it Easier

because they run lighter—go more miles—and require less power to pull the load. Schuttler Roller Bearings save time—money—horses—harness—feed—repair bills—axle greasing—trouble, and wear on the wagon. Official tests by U. S. Government Road Experts show remarkable results. The Schuttler Roller Bearing Wagon soon pays for itself by economy of operation.

Write for Free Book

that describes the Schuttler Roller Bearing Construction and gives record of official tests by United States Government.

1913 Pratt Cars

Five Years—Every one successful as manufacturers of automobiles.

Forty Years—Every one successful as manufacturers of standard vehicles.

Get Catalogue showing photographic view of all models, and giving you the standards by which to value any car.

We have a business proposition for you. Our goal for 1913 is a "Pratt Car" in every locality. If there isn't one in your neighborhood—if there isn't a Pratt dealer near you it will be to your material advantage to write or wire and let us know.

Three Distinct Models—Pratt 50, 122-inch wheel base, electric starter and electric lighting system. Price $2,150.00
Pratt 40, 120-in. wheel base, Presto-O-Starter and electric lighting system. Price $1,850.00.
Pratt 30, 114-in. wheel base, Prest-O-Starter and electric lighting system. Price $1,400.00.

ELKHART CARRIAGE & HARNESS MFG. CO.
ELKHART INDIANA

Cowpea Culture.

COWPEAS should be planted one to three inches deep, according to the nature of the soil. The old-fashioned way of planting peas was to plant them broadcast by hand in a field that had been plowed and thoroughly harrowed; then harrow over lightly to cover the peas. This method has been improved upon by the use of a grain drill, which puts them in uniformly, in rows about eight inches apart.

Another very good plan is to sow the peas broadcast through a field of corn just before working it the last time, the last cultivation covering same up sufficiently to make a good crop of peas. The peas and corn can then be cut together and put in a silo, or corn allowed to mature and ears gathered, then cut stalks and pea vines for hay, or turn the stock into the cornfield after the corn is gathered, or peas allowed to mature and gathered for seed by hand, then plow the vines under for fertilizer or turn in the stock.

When planted broadcast for hay, we recommend that only mixed peas or bunch varieties be planted, as the long-vine varieties mat up so they are hard to handle after being cut. A great many take three-fourths peas, then one-fourth sorghum, millet, soy beans or even oats and plant broadcast for hay, the idea being that the sorghum, etc., by standing upright holds the pea vines up off the ground and allows more sunlight to get to the vines and to the ground, which produces a greater yield. Peas are used largely for a quick hay crop, following a winter crop; disk them right into the stubble as soon as the other crop is harvested, and you invigorate the soil for its winter crop and at the same time make a good hay crop. Some plant peas in rows thirty to thirty-six inches apart, claiming this method brings as good yield in either seed or vines as planting broadcast, as they can be cultivated once or twice before the vines shade out the weeds. Peas are very fine for a cover crop; plant about half bushel to the acre of any variety with your fall planting; the peas come up with their broad leaves and when frost blights them they wilt down, protect and nourish the other crop most satisfactorily.

When allowed to mature their seed, the bunch varieties yield fifteen to thirty bushels of seed to the acre with a good crop; the vine varieties much less. When the vines are cut green the bunch varieties yield one to one and a half tons of hay, the vine varieties about 25 per cent to 50 per cent more. Much larger yields than these are reported, but under very favorable conditions. Should one wish a large seed crop, the yield of seed can be materially increased by an application of phosphate of lime to some soils, but no nitrogen is needed as a fertilizer for peas, even in the poorest soils.

If cowpeas are planted broadcast, one and one-half to two bushels (New Era less on account of being small seed) should be sown to the acre; in rows, about one-half to three-fourths of a bushel to the acre; when planted in corn, about one bushel to the acre if broadcast, while if drilled in beside the corn rows, about one-half bushel is about the right proportion to the acre.

A ton of good cowpea hay is of more value than a ton of alfalfa, or any other hay crop, and when you consider that one planting will bring you in about two months a big hay crop of from one to three tons per acre of the very best hay, it seems absurd that so much money should be spent on alfalfa fields, especially as cowpeas can be planted on the very poorest soil, whereas it takes good, strong land, and land especially adapted for alfalfa. Alfalfa requires twelve months of your land's time.

Pea vine hay may be fed to everything. Chickens, hogs, lambs, goats, pigs, cattle, mules and horses all flourish on pea vine hay. On account of its richness, however, it has to be fed very carefully, and it is necessary to get animals accustomed to eating the green hay for several days by feeding it to them gradually before turning them into a green field of pea vine hay. Some farmers turn their hogs into a pea vine hay field to fatten them to be killed, which does the work quickly and at a very small cost. Pea vine hay—either dry or green—is especially good for milk cows. Work horses will stay in good condition on practically nothing but pea vine hay.

Cowpeas are a natural fertilizer, the real, logical fertilizer provided by nature to renovate soils, and it can be applied with nominal cost, considering results, then make a profit from your land while it is undergoing this improvement. When you plant early you can get one cutting of hay from the early varieties; they will then put out new shoots and leaves, which can be turned under as a dressing for your next crop. Some plant a crop of peas just to be turned under when the vines are matured, considering this the best fertilizer for the money.

Up until two or three years ago peas had to be picked by hand out in the fields. The pods were then run through a huller and the seed separated from the hull. This method is still followed in some sections, especially where they can get cheap labor. Some plant common mixed peas and as soon as the whip-poor-wills mature pick the seed from the whip-poor-wills, then cut the vines for hay. When peas are matured the pea vine stalk and leaves are not as valuable for hay, so it is only in the common mixed varieties that both seed and hay can be harvested to advantage. Another method of getting seed is to let the vines mature in the fields, cut them with a mower, put them on the barn floor and flail the peas out by hand and utilize the hay to best advantage, although the stalks are pretty dry and not very palatable.—[From booklet published by Roney & Co., Memphis, Tenn.

Under the provisions of the current appropriation act for the department of agriculture authorizing the inauguration of experiments in the breeding of horses for military purposes and providing $50,000 for that purpose, the secretary of agriculture, with the concurrence of the secretary of war, has appointed the following men as advisory agents in the selection of stallions and to assist in the operation of the government's plan: Henry Fairfax, of Virgina, for thoroughbreds; C. L. Railey, of Kentucky, for American saddle horses; Walter Palmer, of Illinois, for standard breds; Maxwell Evarts, of Vermont, for Morgans. Each man acts with the officers of the government in the selection of stallions of the breed he represents. The secretary of war has designated Lieut. Col. D. S. Stanley, of the quartermaster corps, to represent the army, and the secretary of agriculture has designated George M. R. Rommel, chief of the animal husbandry division of the bureau of animal industry, to represent the department of agriculture.

The governor of Oklahoma has issued a proclamation calling upon the farmers of that state to burn all bunches of grass which offer a harbor for chinch bugs. The governor of Kansas is being asked to issue a similar proclamation. Investigations have shown that burning of their winter protection will reduce the number of chinch bugs to an astonishing degree.

DIFFERENT BREEDS OF TURKEYS.

To the Editor of The Homestead:

Many inquiries have come to me about the relative value of different breeds of turkeys. The two most popular breeds today are the Bronze and White Holland. Without fear or favor, I will say that my preference is for the Bronze—with one exception. They have queer ideas about the conventional in visiting.

One Bronze hen that was hatched and raised by a chicken hen invariably stayed about the yards and selected a nest in the henhouse. She was the only one that ever seemed to understand the fitness of things. The others, all of them, at nesting time scorned the home nests. If, by any chance, they were herded about the yards until they began to lay, the trouble was over for the time. We used to place barrels on their sides in corners and odd places, and cover them with green branches. Oftentimes the same hen would lay and sit in the same nest several seasons.

It is preferable for a young turkey to never be fed from the house. If the weather was warm and dry the turkey hen and her poults were allowed to go directly to the meadows and fields when their trouble would be over for the time.

The Bronze turkey is the direct descendant from the wild turkey, so what would be more in keeping than that with the first early blast of future cold weather, the different families of our flocks would hunt the highest places and yelp until they were all rounded up? Then the neighboring flocks would emit that peculiar call and pretty soon there would be one drove of turkeys in the country.

I am not disparaging the Bronze turkey; it is my choice, first, last, and all the time, but after chasing them for half a lifetime, I was forced to let them go. Whenever the subject of getting another breed came up, I would, with regret, remember the handsome, snappy, beautiful-hued plumage of the first choice and was indifferent about any other kind.

A neighbor who lived within a half mile of us assured me that if I raised White Holland turkeys there would be no trouble about them straying. As he kept that kind himself and so near, his idea was accepted.

A tom and three hens were purchased, and when they first began to look for nests they bluffed me into thinking they were going to run away, but they never did. Early in the season, by the time the poults were as large as quail, the different flocks would bunch up and the tom would go down to the fields and fight off any enemies that threatened the flock. A White Holland turkey hen is a perfect coward and will run and leave her chicks, where a Bronze hen would fight. On the other hand, I have seen a White Holland tom hover a hen and poults through a heavy rain, and often they will raise the poults while the hen lays and hatches another brood. Nothing of this sort for the Bronze gentleman. He is not far enough removed from the cave dwellers, and when his family assumes maternal cares he hikes to pastures new.

I think the cause of this difference in the breeds is, that the White Hollands are farther removed from the wild stock. Contrary to tradition the white turkey did not come from Holland at all, but is a sport from the Bronze. This belief is intensified by the fact that once when we used a young gobbler, which was very choice, from our own flock in preference to a mediocre bird from a different flock, a white turkey resulted.

We find the White Holland, bred in its purity, a beautiful, quiet, prolific bird. They lay a very large number of eggs and grow to large size. The flesh lacks the gamey flavor of the Bronze and they are not quite so vigorous. In common with many others we have discontinued the turkey business, hoping in a year or two to have better success. M. G. S.

SMOKING THE MEAT.

To the Editor of The Homestead:

The place for smoking meat is important. For twenty-five or thirty joints a house eight by ten feet is about the right size. Where only a few joints are to be smoked a barrel or a dry goods box have been used with success, but one must be very careful that the barrel or box does not catch fire or the meat become too warm. The house should have sufficient ventilation to carry off the warm air. If there are small openings under the eaves or a chimney in the top of the house there will be ample ventilation. An air-tight building is not a good place for smoking meat, for the meat is very liable to be overheated.

I have found it best to hang the meat up close to the rafters. Long poles can be strung to rafters by wire. The meat can be attached to these with binder twine. This puts the meat several feet above the pot containing the fire. Of course, if a stove can be placed on outside and the smoke run in through a stovepipe the meat need not be hung so high. The meat should be so arranged that the smoke will pass freely around it and out of the house. The circulation of the smoke does not need to be rapid. The best results are obtained when it is rather slow.

I have used a good many kinds of wood in smoking the meat, but I prefer the green hickory or maple. My method has always been to use a kettle, the bottom of which is covered with ashes. A fire is put in the kettle, just a few coals from the cook stove. Then the green hickory chips are placed on the coals with the addition of several dry pieces that will keep the fire going. If the wood happens to get to blazing I throw over it a shovelful of ashes. That smothers out the blaze and makes the smoke dense. I never use any soft or resinous woods for smoking purposes. They give a strong flavor to the meat.

It has been my custom to take the meat from the salt several days before smoking it. The salt is washed off in warm water and the meat is hung in position in the smoke house. It will dry in less than ten days. The pores of the meat will then be ready to receive the smoke.

I find it is best to keep up a regular smoke from the time I set it under the meat until the meat is well colored. The regular smoke keeps the meat warm, opening the pores for the reception of the smoke and concluding the work more rapidly. The meat should be thawed out before smoking if it has been frozen. I keep the house dark while smoking to prevent flies. In three or four days by continual smoke the meat will be in the proper condition to pack away for summer use. If weather is not very warm the meat may be left hanging in the smoke house. When it begins to warm up the meat should be taken down and wrapped in paper that is pasted to meat with a starch in which is a liberal supply of cayenne pepper. Then it should be slipped into canvas sacks and hung in the former place. I have followed this method for years, and do not remember of ever having a piece of meat spoil.

Fills 60-ft. Silos With Ease!

The day of the skyscraper Silo is here. No Silo too high for the Smalley! Mr. Charles Spayde, of Humboldt, Iowa, says: "We cut over 1200 tons of ensilage the fall of 1911, and about 350 tons last fall. Cutter worked fine and we are now using it to cut all of our dry feed, viz: Hay, straw, cane fodder, etc."

Real business farmers like Mr. Spayde have no time to fool with the old slat-apron type of machine. They want this force-feed chain-table, grip-hook kind, made by Smalley only. Thus they save a tremendous amount of work and do a quicker, cleaner job. No coarse, uneven silage. All uniformly cut. Which means greater tonnage per silo.

POWERFUL SMALLEY FORCE-FEED SILAGE CUTTER

not only handles green silage, but is also a wonder at cutting dry feed. Handles alfalfa, for instance, to perfection. Letters in catalog prove it. Many farmers use their Powerful "Smalley" to cut corn in the fall and oats and peas in the spring for feeding when pastures dry up in July. Only one drive pulley on Blower outfits No Idler to bother with. Ten per cent steel guaranteed in all foundry castings. No oiling by hand—hard oil cups on all important bearings.

You won't know what a real Silo Filler is till you've seen the Powerful "Smalley" or had the Smalley Catalog. Why not send a postal this minute for the latest Smalley Catalog and learn about the Silage Machine that four out of five silo owners now use? Write now and you'll get this fine, useful Book by return mail.

FIELD NOTES.

If in the market for Scotch Short-horn bulls the advertisement of Davenport & Mack, Belmond, Iowa, appearing elsewhere in this issue, will be of interest.

H. Schuette, 253 Third St., Milwaukee, Wis., has a pure-bred Holstein-Friesian bull calf which he is advertising for sale in his advertisement found elsewhere in this issue.

T. H. Russell, Geneva, Ohio, will sell 200 head of registered Holstein cattle May 1st and 2d at his Idle Hour Farm. File your application for a catalog and watch for particulars.

Two good young Short-horn bulls are advertised for sale by M. A. McWilliams, Wall Lake, Iowa, elsewhere in this issue. One of these is a yearling and the other is a nine-months-old bull and both are sired by Gypsy King, a Bellows-bred bull. The price is $100 each if taken soon. Mention The Homestead when writing Mr. McWilliams about them.

Two splendid young Scotch bulls ready for service are offered for sale by H. B. Harden, Corning, Iowa, elsewhere in this issue. One of these is a Cruickshank Secret and the other is a Bridesmaid. The former is a son of that well-known bull, Col. Dalmeny, regarded as one of the best bulls today in southern Iowa. Make it a point to go at once and see these bulls if you are on the market for a herd bull.

H. P. Wilkinson & Bros., Mitchellville, Iowa, have some imported Shire and Percheron stallions and mares for sale that are now in excellent condition and fully acclimated. These gentlemen have an especially good lot of stallions that they are desirous of selling and will make prices that will look attractive to buyers. See their advertisement elsewhere and write them, mentioning The Homestead.

T. A. Stevenson, Shannon City, Iowa, writes that he is sold out on male Collie puppies, but that he has two "gilt-edge," fancy bred females, whelped August 23, 1912. Typical Collies, sable and white, with full white collars, fine heads and beautiful, well-set ears. There are no better bred ones. They are sired by Mr. Rogers' great imported Collie, Imp. Southport Successor 141339, A. K. C. He is by Champion Southport Sample and out of Ebberleigh Sincere. The dam of these females is Beatrice Lassie 161967, A. K. C. She is by Cannon 137787, A. K. C., and he is by the undefeated Champion Squire of Lytton. Beatrice Lassie's dam is Cartirel Ethel by Champion Parbold Peacock and he is by Champion Aufield Model, dam Lancaster Ida. If you want something fine in the way of the very best Collie blood in this or the old country, and you are willing to pay a fair price for a good one, here is your chance. Write him for prices, mentioning The Homestead. See his advertisement elsewhere in this issue.

J. H. Swink & Son, North English, Iowa, are proprietors of the Quality Poultry Yards. In their advertisement found elsewhere in this issue they are offering eggs and baby chicks of White and Buff Orpingtons, White and Barred Plymouth Rocks, Single Comb White Leghorns, White Wyandottes and Single Comb Rhode Island Reds. They write: "We have a very fine lot of poultry. We have one special feature, that is, we test all of our eggs with the Magic egg tester, which is giving most excellent results. We guarantee our eggs."

The accompanying illustration is that of His Highness, the great roan Scotch bull at the head of the Shallenberger herd. He was got by the great Victor's Roan Duke. Many cows in the forth-

THE HEAD OF THE HERD.

coming sale will be bred to this bull, and a few have calves at foot. The sale will be held at sale barn on April 10th. Address for catalog, Hon. A. C. Shallenberger, Alma, Neb., and kirdly mention The Homestead when you write.

Harder Patent Wins.

We have been requested to call the attention of our readers to a suit just won in the United States District Court by the holders of the Harder silo patents. Full information is found elsewhere in this week's issue in the advertisement of the United States Silo Company, of Anderson, Ind.

Eggert's Imported Horses.

George Eggert, Newton, Iowa, has high-class Percheron, Belgian and Shire stallions and mares for sale at reasonable prices. Mr. Eggert has enjoyed an excellent trade during the past few weeks and will have another importation of high-class stallions arrive at his barns in about ten days. He will be glad to show prospective purchasers his stallions ad give prices. His advertisement appears elsewhere in this issue. Write him, mentioning The Homestead.

Scotch Short-horn Bulls.

Davenport & Mack, Belmond, Iowa, whose advertisement of Short-horn bulls appears elsewhere in this issue, have two Scotch calves which are of real herd-heading character. One is only a June calf, but is the choicest of the bunch of five that are for sale. He is by Fair Knight by March Knight, out of a Lancaster cow of W. C. Edwards' breeding and a matron that weighs 1,800 pounds. This calf is very square and is a choice thing for any breeder who needs a young bull to bring on for later use. The other Scotch bull is also a Fair Knight calf and is out of a cow by Imp. Kinellar Stamp, second dam by Imp. Charmer. He is a big, straight-backed, red calf, a year old in April. A yearling bull, a twin, with another bull now heading a herd, sired by Charming Ensign, out of a cow by Commodore, is a smooth youngster and a good one. There are two other Fair Knight calves, carrying five or more Scotch tops that are worth some investigation by those who need Short-horn bulls. The calves are thrifty and vigorous and have made good growth for their age, especially the June calf from the big Lancaster cow. All are pure bred in color except this same calf, which has small white stockings and some white on the belly. Write now for the descriptions and breeding of the bulls. There are some good bulls here for someone. Address Davenport & Mack, Belmond, Iowa.

Agents Wanted.

Jos. Barnett & Co., a very reliable manufacturing firm that have used The Homestead for a number of years for advertising their goods, now have a vacuum cleaner which is being advertised elsewhere in this issue. They want agents to handle it and pay a very liberal commission. This seems to us to be a very good proposition and we would suggest that some of our friends write them.

Death to Gophers.

We wish to again recommend to our readers Gopher Death, manufactured by the F. D. Chemical Co., Ft. Dodge, Iowa, which has a great reputation through the grain belt for destroying not only gophers, but ground squirrels, prairie dogs, kangaroo rats and other pests of this kind. The price is very reasonable, 1,400 tablets being sold for $1.25. Trial package, fifty cents. A free booklet will be sent our readers who are not now ready to place an order.

Messenger's Hampshires.

Clayton Messenger, Keswick, Iowa, the well-known Hampshire breeder who owns the 1912 undefeated grand champion boar, Messenger Boy, changes his advertisement in this issue of The Homestead stating that he has nothing for sale. Mr. Messenger has 150 pigs to date and thirty more sows to farrow. Later in the season he will be well equipped to take care of his large trade and parties who want to buy high-class Hampshires sired by a champion should keep him in mind.

Cox's Short-horns.

R. J. Cox, Grinnell, Iowa, has some good Short-horn cows and heifers of different ages as well as some extra good young bulls that he would be glad to show prospective purchasers. Mr. Cox raises his cattle in a practical manner and they are always in a position where they may be expected to improve in the hands of the purchaser. If you want some females or a bull sired by high-class Scotch bulls see his advertisement elsewhere and mention The Homestead when writing.

Will Sells' Durocs.

In a recent letter from our old friend, W. M. Sells, Indianola, Iowa, he says: "I recently sold a good young boar to M. A. Canary, Franklin, Ind., and he was a son of Wonder Chief and was out of old Missouri Girl. He is a good pig and I am sure he will be well pleased with him when he gets him. I have about fifty good pigs already and have more to come shortly and if everything goes right with me this year I am going to have something that the boys will all want the coming fall. It looks to me that the Duroc Jersey business is going to be better the coming fall than it has for many years and you can just say to the breeders that I am going to be right there with some of the best pigs I have ever raised, because I am going after them from this time on."

Westrope Offers Short-horn Bulls.

With this week's issue we begin the advertisement of J. G. Westrope, Harlan, Iowa. He is offering sixteen head of good young Short-horn bulls for sale of the Scotch and Scotch-topped sorts. Among the really choice bulls that he is offering is the great young Scotch bull, Scottish Rex, and he is one of the outstanding good young Scotch bulls that is being offered for sale here in the West. He is a son of his splendid herd bull, Royal Rex 3d, and he in turn is a son of Diamond Rex, who in turn was a son of Imp. Cock Robin, the International champion. The dam of this young bull is Carrie Esther 2d by Royal Prince 7th, the next sire being the great bull, Baron Gold Dust 3d. He is a Campbell Rosebud and he is good enough to head any of the best herds in the country. He is a solid red in color, a thick-fleshed, evenly balanced bull, and one that will be a credit to any herd. Owing to the fact that Mr. Westrope has his sire and dam he has concluded to offer this great young bull for sale. Besides him he also has about fifteen young bulls for sale, among which are several Scotch bulls. One of these is a nice roan and she is a well-bred Miss Ramsden. Another is a Rosebud and another is a Flora. Any one of these will make a good herd bull when grown out. He also has a splendid lot of good young Scotch-topped bulls for sale. If you are going to want a bull this spring it will pay you to visit the Westrope herd and do it at once. If you write him kindly mention The Homestead.

A Correction.

In the report of the Ruebel Bros. Poland China sale, held February 20th, the average on the offering should have been $72.16 instead of the figure at which it was given. The offering was a good one and sold well in spite of a rather disagreeable day.

Some Real Choice Short-horns.

L. Chestnut & Sons, Geneva, Neb., still have on hand a few of those very choice Short-horn bulls sired by the great Royal Sovereign that will be priced well worth the money. This herd is one that is particularly good, as most of the foundation cows are sired by Red Champion, a bull that was used in this herd for several years and is now at the head of the Fred Busse herd at Columbus. Red Champion was one of the great Scotch bulls of the state and these young bulls are nearly all out of Red Champion cows and sired by Royal Sovereign by Golden Sovereign. Write Chestnut & Sons at once if you really wish a bargain in a nice, sappy Short-horn bull. Mention The Homestead when you write.

Big Polands Doing Nicely.

J. A. Schaldecker, Grafton, Neb., reports that everything is doing fine at his place. He has a number of fine litters by Big Sensation and out of King Mastodon Jr. sows that look like the right sort to Mr. Schaldecker. Big Sensation is by Vindicator and King Mastodon Jr. is by old King Mastodon and was sold last fall by Mr. Schaldecker to head the Ed Hickey herd and at a good long price. This line of breeding ought to be good and this was largely the sort of stuff that made Mr. Schaldecker his good winter sow sale. Keep the herd in mind, for good boars will be for sale from here a little later. Mr. Schaldecker also has in use in the herd the Herman Baltz herd boar, B.'s Great Hadley.

Huckstep's Mammoth Jacks.

J. C. Huckstep, Eolia, Pike county, Mo., has this year more high-class Mammoth-bred jacks in his barns than he has ever owned at one time. They are Missouri and Kentucky-bred fellows that stand fourteen and one-half to sixteen hands high and are sold under a guarantee that is as good as can be found. Mr. Huckstep has spent a lifetime in the business and has never deviated from his policy of guaranteeing everything to be just as represented. He would rather not make a sale than to have a dissatisfied and disappointed customer. Note Mr. Huckstep's advertisement in this issue and when writing or visiting him kindly mention having seen his advertisement in this paper.

Lefebure's Belgians.

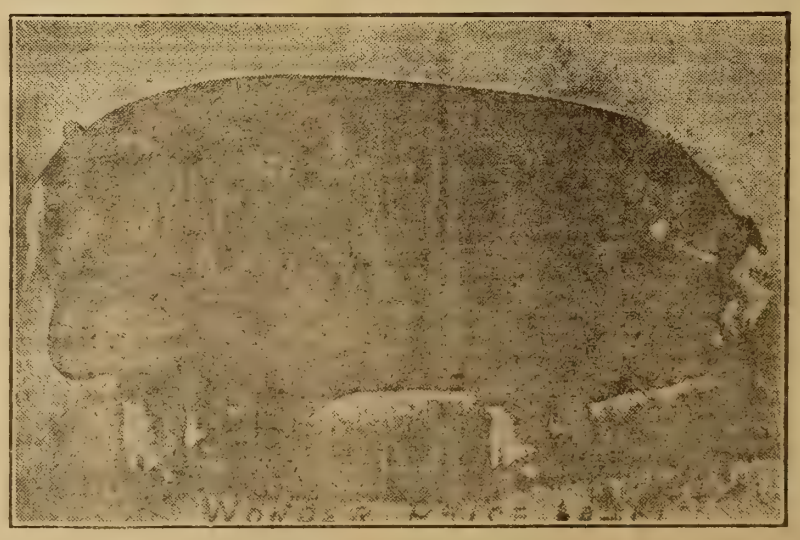
Henry Lefebure, the well-known importer of Belgian horses, Fairfax, Ia., writes under date of March 13th as follows: "My first importation this year of Belgian stallions arrived at my farms in the best of condition today, not one with a cold, and every horse in the best of health. This makes 120 head imported by me during the last eleven months. I have been making an early spring importation every year and find them fully as sure breeders the first season as are those imported in the fall. All my barns are filled full and nowhere will buyers find as large and choice a collection of Belgians to pick from. All lovers of choice draft horses are invited to come and see them. Catalog mailed on application." See the advertisement elsewhere in this issue and mention this paper when writing.

Van Steenberge's Belgians.

A. M. Van Steenberge, Ogden, Iowa, informs us that his imported and home-bred Belgians are now in prime condition to go on the stand. They are of the big, rugged kind, with clean limbs. He will make attractive prices for the next thirty days and can supply horses of all colors from two to five years of age. Among his sales for last week are a team of ton mares to A. Doerder, Boone, Iowa; a heavy bay stallion to New Marion Belgian Stallion Co., Stratford, Iowa; two splendid yearlings to C. G. Dourte, Swea City, Iowa, and a ton three-year-old stallion to Arthur Johnson, Boone, Iowa. Mr. Van Steenberge would be glad to hear from parties interested, as he can supply good, sound horses at lowest prices. A square deal is his motto. See his advertisement and mention The Homestead when writing him.

Trees at Half Price.

We wish to call our readers' attention to the advertisement of the Earl Ferris Nursery appearing elsewhere in this issue, who claims he is selling his hardy northern-grown evergreens at half the price ordinarily paid for stock handled through agents. Mr. Ferris says he can do this because he has no salesmen on the road other than his catalog, which costs him only one cent to mail. In this he describes very clearly the prices on his evergreens, "True-to-Name" fruit trees, Delicious apple, Earl plum, Jones strawberries and many others. Mr. Ferris stands back of every shipment made and guarantees the trees to reach the purchaser in first-class growing condition and to give satisfaction in every respect. He has devoted his entire life to the nursery business, his father having started the present establishment in 1869. He is offering 100 transplanted evergreens (express paid) for $7.50. These trees have been transplanted and root pruned, which assures an abundance of fibrous roots. This is Nature's guarantee of life to young trees. Mr. Ferris assures our readers that evergreens are easy to start when handled as he does, shipping them in air-tight casings and only being out of the ground eighteen



The above illustration is that of Wonder Price, the well-known boar in use in the herd of Herman Schmale, DeWitt, Neb. This is one of the real good A Wonder boars of the country and his dam is the great sow, Lady Nelson by old Big Price. Mr. Schmale is offering early fall boars and gilts by this sire. Write for prices immediately.

to thirty-six hours, according to the distance of the purchaser from the nursery. We would suggest that our readers write to Mr. Ferris for catalog.

An eighteen-months-old stud colt, that seems to be the right kind, is described and priced on page 49 in the advertisement of Amos Hanson, Collins, Iowa. If interested in getting a horse to use on your own mares better go and see this colt or write to Mr. Hanson for further particulars.

Kent's Chester Whites.

Any of our readers who want to buy a few good Chester White sows should write to Thos. F. Kent, Walnut, Iowa, at once, as he has some of the very best for sale. He can supply you with almost anything you want in the Chester White line and now is the time to get your order to him. Don't delay, but send it at once and you will be pleased with the sows you get from this noted herd.

Vaughn Offers Percheron Stallions.

W. W. Vaughn, Marion, Iowa, is offering for sale Perche 69063, a black-gray three-year-old Percheron stallion that has been used some and he has colts to show that he is a good breeder and is siring the right sort of colts. This horse is a low-set, wide, good-quartered fellow with good, heavy bone and good feet. The writer, a representative of this paper, has inspected this horse and can frankly say that he is a bargain at $700, the price Mr. Vaughn asks for him. See the advertisement elsewhere and if in the market for a good horse visit Mr. Vaughn and look over this horse.

Short-horns at Galesburg March 25-26.

Tuesday and Wednesday of next week, March 25th and 26th, nearly 100 head of registered Short-horns will be sold at the C., B. & Q. stock yards, Galesburg, Ill. On March 25th a combination offering from the herds of A. J. Ryden, Abingdon, Ill.; Chas. T. Nelson, Blandinsville, Ill; W. H. Kreigh & Son, Knoxville, Ill., and H. G. Bowers, Elmwood, Ill. Fifty head, including twelve bulls, are listed by these gentlemen, and among them are some very attractive propositions. Wednesday, March 26th, the well-known herd of Rigg & Glasgow, Mt. Sterling, Ill., will be dispersed, owing to a dissolution of partnership. A choicely bred lot of cattle will be sold. Parties in the market for good Short-horns should not overlook these sales.

Glissman's Holsteins.

In a recent letter from Henry C. Glissman, Omaha, Neb., he says: "Following our sale of February 4th and 5th, at which time our Rock Brook herd was practically dispersed, owing to the dissolution of partnership, I have been east and have bought six car loads of high-grade and registered Holsteins. Included are twelve sons of King of the Butter King, four sons of Milk and Butter King, the $10,00 bull, and King Segis Hengerveld, three of the best bred bulls known to the breed. A number of these bulls are out of A. R. O. dams and are grown right. I want to dispose of these in the next thirty days, as I want them all sold by grass time, as I am short of pasture room. I also brought out twenty-three as fine registered cows and heifers as have ever been brought to this western country. Mostly all are of A. R. O. breeding and bred to great eastern bulls, and either fresh or soon due. I also have three car loads of high-grade cows and heifers from one to four years old in the shipment. I want to sell these quick and will price them right to quick buyers." Those of our readers who are wanting either registered or high-grade Holsteins should make it a point to go and see Henry C. Glissman, Station R, Omaha, Neb., at once. When writing him kindly mention The Homestead.

White Bros.' Angus Sale.

On March 25th, White Bros., Perry, Iowa, are offering a draft of forty head of Aberdeen Angus cattle that should meet with the approval of all those who are believers in this great breed of early maturing beef cattle. They are listing forty cows and heifers and ten choice young bulls for this sale and they are very largely made up of the Blackbird, Trojan Erica and K-Pride tribes. They are not only selling a very well-bred lot of cattle, but they are also cataloging an especially choice lot of individuals. One of the very select cows they are offering in this sale will be Star's Rose, a daughter of that famous grand champion cow, Glenfoyle Rose, that for several years won everything in the leading show rings of this country. She sells with a splendid young bull calf at foot by the Blackbird bull, Sunnyside Prince. She will be one of the bargains in their sale. They have drawn upon seven of the very best Blackbird females they have in their herd for this sale and three of these belong to that celebrated Blackcap tribe. Some of these will have calves at foot and the remainder that are old enough will be safe in calf to either their Blackbird bull, Sunnyside Prince, or to their Trojan Erica bull, Imp. Everett of Maisemore. Among the good K-Pride cows they are selling is Imp. Katiska of Moncur, a daughter of European Baron. This was one of the very best heifers that Chas. Escher brought over in his last importation, and they bought her in his sale just following. She has been a splendid breeding cow and they are selling her for an attraction. Her daughter, Katiska of Whitesides by Imp. Kanimura of Ballindalloch, also goes in and she sells with a good bull calf at foot by Everett of Maisemore and she is rebred to the same bull. Then they are listing some of their best Trojan Ericas, many of which are daughters of some of the more noted bulls of the past few years. Among the ten young bulls will be a nicely bred Blackcap and two other good young Blackbird bulls, three Trojan Ericas and two K-Prides. While some of these bulls are young there are nevertheless some good herd-heading material among them. Write White Bros., Perry, Ia., for catalog and kindly mention The Homestead.

Huckstep's Mammoth Jacks.

J. C. Huckstep, Eolia, Pike county, Mo., has this year more high-class Mammoth-bred jacks in his barns than he has ever owned at one time. They are Missouri and Kentucky-bred fellows that stand fourteen and one-half to sixteen hands high and are sold under a guarantee that is as good as can be found. Mr. Huckstep has spent a lifetime in the business and has never deviated from his policy of guaranteeing everything to be just as represented. He would rather not make a sale than to have a dissatisfied and disappointed customer. Note Mr. Huckstep's advertisement in this issue and when writing or visiting him kindly mention having seen his advertisement in this paper.

The Sayer-Stanton Short-horn Sale.

Thursday and Friday, April 3d and 4th, George J. Sayer, McHenry, Ill., and Thos. Stanton, Wheaton, Ill., will unite in an offering of 100 head of Short-horn cattle at Chicago, Ill. There is much to interest the buying public in this sale, both in bulls and females. Mr. Sayer is selling much of the get of the $10,000 Prince Imperial and many of the females are bred to Roan Sultan, the sensational son of Glenbrook Sultan. There are four good young bulls, including Claret's Prince by Prince Imperial, that are worthy of attention sale day, and many extra good females are cataloged, of which we will speak in a later issue. Mr. Stanton sells fifty head, including six bulls, and he has one of the top offerings of the season. He is selling what is without doubt the best balanced lot of cattle he has ever presented. The bull end of it is very attractive, and in addition he will offer the choice of his herd bulls, Masterpiece and Browndale Sultan. He can spare either, but not both. They are among the outstanding sires of the breed. Masterpiece has been raised from a calf by Mr. Stanton and his get in the herd stamp him as a sire of the top rank. Browndale Sultan is little short of sensational, and the record of both bulls is of the best. In addition Mr. Stanton is selling Roan Masterpiece, a cracking good youngster by Masterpiece, an outstanding roan calf by the McMaster bull, Silverdale, out of an imported Missie cow, that is a great prospect and a calf by Selection, out of a Glenbrook Sultan dam that gives every promise of developing into a very valuable herd header. There are forty-four females in Mr. Stanton's offering, all good ones and all attractively bred. Sittyton Beauty is a good young cow with an exceedingly heifer calf at foot by Masterpiece. White Secret belongs to the same family as the show cow, Susan Cumberland. She has a good bull calf at foot by Sailor, a Pettit-bred bull, and is rebred to Masterpiece. Lady Craibstone sells with a bull calf at foot by Perfect Marshal, a grandson of Whitehall Sultan, and Viola Blossom is an attractive Orange Blossom, heavy in calf to Silverdale, the outstanding bull at the head of Mr. McMaster's herd. Sinnissippi Pearl, a Missie by Ceremonious Archer and out of a Red Knight dam, is one of the good cows in the sale and is bred to Masterpiece. Sittyton Lady by Glenbrook Sultan is a very sweet, thick heifer, well along in calf to Master Missie, a son of Masterpiece, and another outstanding daughter of Glenbrook Sultan is offered in Oakland Mildred, out of Pine Grove Mildred 5th by Marquis of Zenda. She is bred to Sultan's Cruickshank. An extra good young cow is offered in Village Maid, bred to Browndale Sultan. And so it goes all through the list. Attractive individually and possessing as rich pedigrees as can be found in the herd book, these cattle should appeal very strongly to the buying public. They will stand inspection in every way. This sale follows that of Anoka Farms at Waukesha, Wis., April 2d, and precedes that of D. R. Hanna at Chicago, Ill., on the afternoon of April 4th. Practically 200 head of cattle are to be sold at these four sales, the largest number of the year, and each sale lot is a high-class offering. Attend these sales. There will be cattle for all. Write today for the Sayer-Stanton catalog to Thos. Stanton, Wheaton, Ill., mentioning The Homestead when you write. See advertisement elsewhere in this issue.

American Goods for Sale.

Elsewhere in this issue will be found the advertisement of W. M. McLaughlin, Shelby, Iowa, who is offering to sell his splendid Short-horn bull, American Goods, and he is a bargain for some breeder who is on the market for a strictly good herd bull. American Goods is now six years old and he is a son of that celebrated show and breeding bull, Imp. Choice Goods, and he is one of the few sons of that celebrated sire now living. His dam is Princess Violet by the great bull, Alice's Prince, that was used so successfully in the Casey herd, and he belongs to that noted Marsh Violet tribe. Mr. McLaughlin originally purchased this bull from Bellows Bros., in company with Charlie Daws and August Sonneland. Later on Mr. McLaughlin acquired the other interests and for the past three years has owned the bull himself and has been using him with the best of success. He will weigh 2,200 pounds in breeding condition and is just in his prime. He is retaining all of his heifers in the herd and as he now has two other herd bulls he has decided to sell him. Mr. McLaughlin has another good herd bull that he secured from Charlie Daws and he will also offer the buyer the choice of these two herd bulls. This bull is a low-set fellow and is a son of Nonpareil Prince, the bull that headed the C. W. Daws herd and was the sire of nearly all of his show cattle. This bull belongs to that noted Jasmine tribe and is a daughter of Jasmine 7th, the most noted breeding cow Charlie Daws ever owned. He will give a man the choice of these two bulls and he also has about ten young bulls for sale. Write Mr. McLaughlin at once about these bulls, but the best thing to do is to go and see these at once, as there are not many bulls bred like these now offered for sale. When you write him kindly mention The Homestead.

Saunders' Short-horn Bulls.

Elsewhere in this issue will be found the advertisement of C. A. Saunders, Manilla, Iowa, who is offering some excellent young Short-horn bulls for sale. Several of these are very choice and are strictly herd bull propositions. Inasmuch as there are so few good bulls for sale and inasmuch as Mr. Saunders has some good ones, it behooves those who are going to want a bull to go and see these at once. One of the choicest is a thirteen-months-old roan bull called Royal Cumberland 5th, a son of the great show bull, Royal Cumberland, that was champion bull at the Denver show three times. His dam is Gladsome 5th by King Marengo, second dam by that noted bull, Champion, and third dam by Imp. Brunswicker. Here is a very promising roan bull of that celebrated Gardenia tribe, and he will make an excellent herd bull for some good herd. Another choice bull is Royal Cumberland 3d, he by Royal Cumberland and out of Gypsy Maid by The Baron. This is also a roan in color and a good one. He was a first-prize bull in the junior calf class at the Iowa and Nebraska State Fairs and second at the Royal. He is a wonderfully thick-fleshed bull, with the best of head and horn, and will make a splendid herd bull. One of the greatest young bulls to be found on the Greely Farm this year is a young roan bull called Cumberland's Type. This youngster is a son of his celebrated bull, Cumberland's Best, and his dam is Gypsy Cumberland by Cumberland's Last. He is a rich roan in color, with a wonderfully good coat of hair, and is a bull of unusually strong character. His head and horn are strictly good, his body is thick, his rib is wide and his depth of quarter and wonderful back and loin make him one of the best young bulls we have seen this year. He has a few other good young bulls that he is pricing at from $150 up. He also has thirteen good steers that he is fitting for the shows this fall, and he has enough to fill all the grade and pure-bred classes. Some of these are outstanding good ones and Mr. Saunders says he is going after the grand champion steer class this fall. Those of our readers who are wanting to purchase a bull to head their herd had better go and see these bulls that he is offering at once. If you write him kindly mention The Homestead.

The illustration shown herewith is a photo taken on the fine stock and alfalfa farm owned by W. N. Rogers, McCook, Neb., and which is now for sale. This is one of the best improved and most noted stock farms in Nebraska, and is in better shape to make money for the operator at this time than ever before, and it has made money for Mr. Rogers for the past twenty years. A couple of years ago an irrigation system was put in, and practically the entire farm is under this ditch, which is a private affair and owned by the farm and will sell with it. A water right of this sort is something to be proud of, as it is certain and of very small expense for upkeep. Bumper crops of alfalfa and grain can be grown every year by the use of a little water, while some years it is not needed at all. Splendid local markets and the very best of through train service to markets both east and west make this farm an ideal proposition. Very liberal terms can be had on this place, and those of our readers interested should certainly write for full particulars. There are 508 acres in the farm proper, and also a half section lying across the road adjoining, which can also be had at practically the same terms and prices if one wishes. This half section also has much land under ditch and water right. Write for full particulars and if interested in owning one of the very best money-making propositions in the country, get busy. Address, mentioning The Homestead, W. N. Rogers, McCook, Neb. See advertisement elsewhere.

Leitch & Sons' Clydesdales.

John Leitch & Sons, La Fayette, Ill., the Clydesdale men, write: "Our sales continue good and we have never before had as many inquiries. Our new importation is doing fine and we have now in our stables what is undoubtedly the best lot of outstanding horses that we have ever been able to show our trade. We have more big weighty ton horses and more growthy colts than any of our competitors. We have just sold to the North Branch Horse Breeders' Association, North Branch, Mich., a grand three-year-old Clydesdale stallion; to A. B. McKillop, Lapeer county, Michigan, a good two-year-old filly, and to D. G. Smith, Lapeer county, Michigan, a good brood mare, one that will do him a world of good. We have sold to Peter Quinlen, Guttenberg, Iowa, a grand five-year-old stallion, the good, heavy-boned kind, and to Findlay Bros., Vassar, Mich., the show and breeding stallion, Ronaldo, a horse that has always been well up in the money wherever shown. These gentlemen are founding a stud of Clydesdales and wanted the best foundation stock. J. C. Jones, Grand Ridge, Ill., purchased a three-year-old stallion, a grandson of the world-famed Baron of Buchlyvie. Mr. Jones has lately founded a stud of Clydesdales and has made no mistake in selecting a sire, as he secured one of the grandest colts in the United States. We have also sold to Harry Ackmeyer, Burlington, Ky., a four-year-old stallion of exceptional merit and the best of breeding. This stallion was bought to cross on some well-bred Kentucky mares. Mr. Ackmeyer is a lover of the great Scottish drafter and he is to be congratulated on securing so good a horse. We still have plenty of good ones and parties in the market for a good stallion or mares will make no mistake in visiting our stables. We can show more Clydesdale stallions than any two of our competitors, and we are pricing them lower than they can be purchased at any other establishment." The advertisement appears elsewhere in this issue.

Hanna's Short-horn Sale.

Friday, April 4th, D. R. Hanna will sell fifty head of Short-horns from his Cottage Hill Farm herd, Ravenna, Ohio, at Chicago, Ill. This will be the concluding sale of a series starting at Anoka Farms, Waukesha, Wis., April 3d, followed by the Sayer and Stanton sale at Chicago, Ill., April 3d and the forenoon of April 4th, and no offering will be superior in breeding or individual merit to that which Manager John Garden has selected for this sale. The blood of the great sire, Villager, will predominate. Six of his sons and six of his daughters are listed. While there are four of his grandsons in the sale, and all females of breeding age are bred to either Villager or his sons, Village King and Village Denmark. No Short-horn sire in the country today is forging to the front as rapidly as Villager and the cattle he is producing give ample evidence that he is bound to leave his impress upon the breed. Parties looking for young bulls will find much to interest them in this offering. A very thick, meaty senior yearling is Village Chieftain by Villager. He is a roan, very rugged and growthy, well quartered, with a strong head, and should be in demand sale day. Village Tramp, also by Villager, out of a Lavender dam, is a nice prospect, straight and level, with a good head and plenty of substance. Village Knight by Villager is a promising white calf, out of a March Knight dam, and Village Lyon is a deep, thick, soggy youngster, out of a Butterfly dam. Village Crest is by Village King, out of a dam by Villager, giving a double cross of this blood, and is a well-modeled youngster, with strong back, smooth and well balanced and the type that is in demand. Denmark 2d by Village King, out of the dam of Village Denmark, is a red of much promise and one that Manager Garden says is as good as the sensational Village Denmark was at his age. Village Marquis is by Village King, out of Ruby of Pine Grove 9th, a fine Brawith Bud cow, and is the low-down, sappy, even-fleshed kind. But it is not alone in bulls that the offering is attractive. Manager Garden is offering some exceptional things in the female line, headed by the sensational Village Primrose 2d, first-prize senior heifer calf at the 1912 Ohio, Indiana, Royal and International shows, and junior champion at the last named. This sweet, sappy heifer is even better than when in the show circuit last year and is one of the top things to be offered in any sale this year. Her full sister, Village Primrose, two years old, is also cataloged. She is a red, with a fine head and horn, great front, even, well ribbed and will develop into a matron of the most approved type. Village Maid 2d is another senior yearling by Villager, a strictly show proposition, with a sweet, feminine head, very thick and meaty. Village Blythesome and Roan Lady are two junior heifers by Villager that give every promise of great development. The get of Villager in this sale demonstrates that he is as prepotent a heifer getter as he is a sire of good bulls, and stamp him as one of the great sires of the breed. There are outstanding young females in this sale by such sires as Village Sultan, Glenbrook Sultan, Avondale, Premier, Anoka Sultan, Whitehall King, representing the best Short-horn families that are bred to Villager or his sons, Village Denmark and Village King. One cannot estimate the value of this commingling of the blood of such strong sires. It is an opportunity to secure Short-horns of the most approved type and breeding and should have the patronage of all interested in the reds, whites and roans. The catalog can be secured by addressing John Garden, Ravenna, Ohio, as per the advertisement elsewhere in this issue.

Kindly mention The Homestead when you write.

Butler's Percherons and Belgians.

A good lot of young Percherons, both stallions and mares, sired by imported horses and out of imported mares, are offered by W. J. Butler, Ottawa, Ill., who will sell them at farmers' prices. Mr. Butler also has some Belgians of the right pattern. See his advertisement elsewhere in this issue and write him.

Simmons' Red Polled Cattle Sale—Last Call.

On March 29th, at Lexington, Neb., will be held a sale of Red Polled cattle that western men should endeavor to attend. The sale will be principally made up from the herd of Paul Simmons, Cozad, Neb., but a few are listed from the well-known herd of J. O. Anderson, Lexington, Neb. The sale will be held in the city of Lexington and this point has exceptional train service, being on the main line of the Union Pacific and all trains stopping. This sale marks the complete dispersion of the Simmons herd and many daughters of the famous Teddy 11000 will be offered and they are just as good property in the way of Red Polled cattle breeding as the writer has any knowledge of. They are mostly bred to Cremo Lad, a son of the celebrated show bull, Cremo. A few Cremo cows are listed to sell and they certainly should appeal to those looking for good stuff. It is doubtful if better breeding foundation material has been used to build up any herd than has been used in this herd. It is unfortunate that Mr. Simmons is obliged to disperse this herd, but ill health compels him to do so. If this herd were better known it would add many dollars to the total of the returns, but this fact will make the place a good one to attend for those who are in the market, for these cattle are certainly right in every way. The experience the writer has had with the breed leads us to believe that in this sale will be as good foundation material as has been offered in the West in years and the lead that Nebraska has taken in the show-yard winnings in the leading shows the past few years is good evidence that the West has good cattle. The cattle that are being consigned by Mr. Anderson are characteristic of the sort of stuff always produced on his farm. Mr. Anderson is one of the men who has started with little and built up a business that is enviable in that it is based absolutely on its own merits, and not due to the fact that he has been a buyer of a lot of high-priced stuff. True, he has always purchased high-class cattle and hogs, and at the big sale made by McKelvie & Sons a number of years ago Mr. Anderson was one of the very strongest supports of the sale, but the writer wishes to convey the idea that this business rests on its own foundation, that the stock is sold on its merits, principally to new men, and that the business of breeding pure-bred stuff has been profitable to Mr. Anderson. A better time to embark in the pure-bred cattle business has not been presented for a long time, if ever before, and we earnestly urge Homestead readers to attend this sale if interested in Red Polled cattle. Make arrangements to attend and should you write mention The Homestead.

Harding's Short-horn Sale.

The females cataloged for the annual sale of Short-horns at Anoka Farms, Waukesha, Wis., on Wednesday, April 2d, form what is undoubtedly the best balanced and most attractive lot that has been offered at this premier breeding establishment. The majority were bred by Mr. Harding, representing the concentration of the popular Whitehall Sultan blood, and should appeal very strongly to those wanting the very best to be had in Short-horns. It is impossible to particularize regarding the entire offering. The merit of the cattle cannot be appreciated unless they have been seen. They will fully beat out any commendation that may be given them. No better young cow will be offered this year than Sultan's Aconite, two years old, sired by Whitehall Sultan and bred to Sultan Mine. Mr. Harding considers her the best daughter of Whitehall Sultan he has ever sold. She is not yet three years old, possesses wonderful thickness, character and quality. She is a show proposition in the fastest company and will add strength and prestige to any herd. Another top one in any company is Victoria 3d by Village Sultan. She is the breedy type, thick and deep, and would be right at the top in any show ring. A very strong prospect is offered in Lady Zenda 6th by Leader of Fashion, and a good daughter of Whitehall Sultan is seen in Lavender Sultana. This good, thick young cow is bred to Gloster Fashion. Four outstanding yearling heifers by Fond Memory are offered in Golden Wreath 11th, Goldie, Secret Memory and Village of Anoka, the dam of the latter being the dam of White Sultan. This is a very typey bunch and would be a great purchase for some man needing the right kind of foundation stock. Missie of Cloverleaf 7th sells with a fine heifer calf at foot, making a very attractive pair, and Broadhooks Rose 4th has a white bull calf at foot by Superb Sultan that is a herd prospect. The show heifer, Snow Queen by Superbus, and bred to the champion, Ringmaster, is a top one in any company, as is also Nonpareil Fashion by Leader of Fashion. Broadhooks Anoka by Sultan Mine and out of a dam by Ceremonious Archer is a pleasing proposition and offers a combination of blood lines that should be very attractive. Mischief E. 3d is a show heifer and due to calve before sale day. This extra good young cow should not be overlooked sale day. These are only a few of the good things to be offered, but will suffice to give readers some idea of the merit of the offering. Mr. Harding is selling forty-five head, thirty-three females and twelve bulls, and six head, five females and one bull, are contributed by Heart's Delight Farm, Chazy, N. Y., three of the females and the bull being sired by Imp. Primrose Monarch, a Duthie-bred bull. The twelve bulls Mr. Harding is selling were spoken of at length in last week's paper. They are the kind for which Anoka Farm is noted, and parties needing Short-horn bulls of the best breeding and strong individuality, bred in Whitehall Sultan blood, will find them at Waukesha, Wis., April 2d. Catalogs can be secured by addressing Anoka Farms, Waukesha, Wis., as per the announcement elsewhere in this issue.

Dispersion Sale of Aberdeen Angus.

On April 8th, at the fair grounds in Atlantic, Iowa, will occur the dispersion sale of the Walter Roberts herd of Aberdeen Angus cattle and it will be a splendid place to buy good Angus cattle. The death of Mr. Roberts some time ago is the reason for this dispersion sale and there will be sixty head listed for the occasion. There will be fifty head of cows and heifers and ten head of bulls. Just to show our readers what kind of an offering this will be we will say that there will be twenty-six head of Blackbirds and fifteen Trojan Ericas in the sale, and the remainder will be made up of Queen Mothers, Heatherblooms and Prides. All of their show cattle will be sold, including several winners at many of the western fairs last fall. The old herd bull, Deceiver, will be sold and he is a good breeding bull. He is a seven-year-old bull and in his younger days was a noted show bull. He was grand champion bull at the Seattle Exposition and was a winner at the Iowa State Fair and the International, being defeated only by that noted show bull, Glenfoyle Thickset. There will be a good two-year-old bull in the sale called Botna Valley Blackcap, sired by Sir Blackbird, a bull sold by Chas. Escher a couple of years ago. His dam is Blackcap Echo, a cow that cost Mr. Roberts $805. Another good two-year-old bull is Black Pier, a son of Chas. Russell's bull, Blackbird Barney. He is a double-bred Blackbird and one of the thickest bulls in the sale. There are a number of other good young Blackbird and Trojan Erica bulls in this sale that will appeal to the farmers and breeders who want Angus bulls. There is a good offering of cows and heifers in this sale and many of these have been the tops of some of the best herds the past few years. There will be three imported cows listed, viz.: Imp. Elnora, Imp. Erebena and Imp. Percefoam of Stenhouse. Some of the get of these cows will also be sold in the sale and they are all good. One of the splendid cows listed is Blackbird Bess, a three-year-old daughter of Imp. Earl Eric of Ballindalloch. They showed her at several of the western Iowa fairs last fall and she was first-prize and champion cow wherever shown. She is safe in calf to Imp. Eston of Eshott, Chas. Escher's well-known Enchantress bull. She is one of the best Black cows in the sale. Another good cow of the same tribe is Black Gertrude, that sells with a good cow calf at foot. This cow was the top of the Len Lamar sale a couple of years ago. Blackbird McHenry 52d is another great big cow that sells with a good heifer calf at foot by Black Ballander. She is a six-year-old cow and was the top of Chas. Escher's sale at Omaha. Blackcap Echo is that splendid Blackcap cow that topped the Escher sale at $805 and she is safe in calf to the young Blackbird bull. She also has a good young bull and heifer in the sale. Among the many good Trojan Erica cows to be sold is Enchantress 16th. She belongs to that celebrated Enchantress branch of equally noted Trojan Erica tribe and she sells with a good heifer calf at foot by Botna Valley Blackcap. These are but a few of the better bred things that will be found in this sale. Twenty-one cows will have calves at foot and this will look good to those who want to buy females. Above all things else it will be a splendid place to buy Angus cattle. When writing for catalog address the Walter Roberts Estate, Atlantic, Ia.

The Allen Short-horn Sale.

Without question one of the very best offerings of high-class Short-horn cattle that the writer has ever seen cataloged for a sale is the offering that Geo. Allen & Sons, Lexington, Neb., will sell at South Omaha, Neb., on April 22d. There will be more herd-heading bulls, more high-class females of desirable ages and of splendid breeding and conformation than we have ever before seen go in one sale. The bull end of the sale is far and away the best that Allen & Sons have ever put up. As good bulls, barring one or two, as we have seen for sale for several years, are in this offering. A two-year-old red bull, Gount Victor by Victor Sultan and out of Victoria Countess by Imp. Collynie Archer, is certainly one of the best herd bull prospects that we know anywhere. His second dam was Victoria Princess by Color Guard, third dam Imp. Victoria 67th by Lord of the Isles. This breeding is good enough for anyone, and we would like for someone who has been looking for a herd bull for a long time to see this fellow. He is the bull many men are looking for right now. There are a number of younger ones, extra choice, all by Victor Sultan and out of the very choicest of cows, which will be offered. They are out of such cows as Imp. Collynie Missie by Nonpareil Victor, Missie V. by Vanguard, Barmpton's Crocus by Imp. Banker, Roan Rosemary by Royal Banner, 2d Duchess of Gloster by Orange Blossom's Commander, Orange Lily 2d, out of Imp. Orange Lily and by New Year's Day and a few others equally as good. Victoria Countess, the dam of Count Victor, is the cow that Mr. Allen paid $1,000 for in the Dryden sale a few years ago. Among the good cows are Golden Lady 2d by Lord Missie and out of Imp. Golden Chain by Silver Plate, Village Maid 3d by Sultan Royal by Whitehall Sultan and out of Village Maid by Imp. Earl Marr; Lady Cinderella 3d by Lord Missie and out of Imp. Clara 4th by Golden Ray; Lady Missie 10th by Prince Victor 2d, out of Lady Missie 5th by the great and only Godwin; Lavender Princess 7th by Victor Sultan and out of Lavender Princess 3d by Lavender King; Sunbeam Violet 5th by Baron Rose, tracing to Imp. Sunbeam by Royal Violet, and many others equally as good. Positively the greatest offering of choice cows and bulls of the very best breeding that has ever gone through a sale ring in the West will be offered in this sale. The breeder or the beginner who is looking for the very best cattle to be had should attend this sale by all means. Allen & Sons' cattle sell lower according to the merit than most any breeder we know of, and while these cattle will in all probability bring fairly good prices, yet the writer is of the opinion that there will be the greatest lot of bargains in this sale of any sale this season, for they are certainly worth more than most any offering of stuff that we could name. If you have not the catalog, get your name on this list right now, today, and as soon as the catalogs are out you will receive one.

NEXT WEEK'S SALE PROGRAM

Monday, March 24	Duroc Jerseys, Smith & Rodgers, Springfield, Ohio.
Tuesday, March 25	Short-horns, A. J. Ryden, Galesburg, Ill. Aberdeen Angus, White Bros., Perry, Iowa.
Wednesday, March 26	Holstein-Friesians, A. J. Podendorf, Logan, Iowa. Short-horns, Rigg & Glasgow, Galesburg, Ill.

CONCRETE ROADS FOR COUNTRY USE.

To the Editor of The Homestead:

In several sections of the country roads have been economically built of concrete and serviceably used for a number of years. With macadam roads in some instances costing from $8,000 to $9,000 per mile and being of only temporary value in solving the good highway problem on account of heavy maintenance expenses, the permanent concrete roads, it is claimed by some, excels all other classes of highways for all-round efficiency and adaption for both heavy and light traffic.

Particularly good results have been secured in Michigan with concrete roads. Some of these highways have been subjected to rigid test for four or five years and in every instance they have proved their excellence, durability and relative inexpensiveness. Annual maintenance expenses which in several Michigan districts formerly exceeded $40 per mile have been reduced to trifling amounts in consequence of the utilization of concrete roads.

It is always to the country's interest to build only that kind of road that will give the best results at the least annual cost. Permanence, practicability, and ultimate inexpensiveness are outstanding characteristics of the concrete roads. In addition, these concrete highways are smooth and yet not slippery. Everyone appreciates how irregularities in the surface prove to be sources of weakness and ultimate failure. If the pavement road is rough, the wheels passing over it pound and soon break down the road. If the road surface is at all wavy, the depressions will accumulate water which will in the long run accomplish the ruin of the road. The concrete roads, it is claimed by some, remedys all these difficulties.

Concrete roads make smooth, permanent, dustless and durable highways whose original rather high cost is balanced by their subsequent low annual maintenance charges. Of course, efficient management and workmanship must be employed in the construction of such concrete highways; care in the selection of good, clean stone and sand, economy in the use of cement, adequate methods of drainage, the practice of proper mixing of the concrete, and care in preparing the foundation are all prime requisites for the construction of efficient roads of a permanent nature. Furthermore the planting of trees along these concrete highways has proved of inestimable value in Michigan. The trees act as a shield and protection for the roads; they ward off the extreme heat of the sun and materially add to the life of the highway. The shade afforded by the trees is a comfort alike to both men and beasts that traverse the roads.

The practice in Michigan is first to prepare and shape the subgrade, rolling it with a ten-ton roller and laying the concrete right on the natural subsoil. The trunk roads are built sixteen feet wide with—gravel or limestone shoulders four feet wide on each side. The lesser-traveled roads have twelve feet of concrete with a minimum width of twenty-four feet. Some ten and eighteen feet concrete roads are also built. The concrete is put down wet so that no tramping is necessary after it is placed. Thereafter the concrete is not disturbed until it is trimmed to the curvature of the road and thoroughly dried. Smoothing is done with simple wooden floats of home manufacture. The work of each day is covered with canvas; the next day the canvas is removed and the concrete surface is covered to the depth of two inches with sand or other loose soil to prevent the concrete from drying out too rapidly. The road is sprinkled continuously for eight days. Roads are not opened to traffic until at least two weeks after the last concrete is put in place. The roads are built in twenty-five-foot sections with projecting plates three-sixteenths of an inch thick and three inches wide at each contraction joint. These plates protect the edges from chipping. Two thicknesses of asphalted felt are inserted between these metal plates cutting the entire depth of the concrete. The concrete mixture generally used consists of a combination of one part of cement, one and one-half parts of sand, and three parts of crushed stone gravel evenly and thoroughly mixed. In Wisconsin a one, two, four mixture is being used and according to reports, with satisfaction.

In the case of one of these Michigan concrete roads the base was a four and one-half inch filling of a one, three, six mixture with a surface of one and one-half inches of a one to

BIG FREE BOOK ON
CLOVER
A gold mine of information
We have just published a wonderful new book entitled "Clover, the Great $Cash Money Crop$." It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and milk. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; all about the causes of "clover sickness" and how to deal with it. Hundreds of other questions, covering sixteen clover varieties, are fully answered. Ordinarily this book sells for 35c, but for a short time we will mail a copy free, or until a certain number have been distributed. Write at once.
GALLOWAY BROS.-BOWMAN CO., BOX 108 K WATERLOO, IA.

A Non-Rotting Manure Proof Shoe for Farmers
A work shoe with style and perfect fit. Made well from especially tanned leather by special process. Will not rot or crack through from barnyard service. Nothing like it on the market. Cost no more than ordinary shoes. Ask your dealer for them. Each pair absolutely guaranteed by manufacturer to stand manure and barnyard acids.
Huiskamp's Barnyard Shoes Are Guaranteed Farm Shoes
Free Bottle Barnyard Shoe Oil.
If you have never worn Barnyard shoes write us for Free bottle Barnyard non-rotting preparation. Send your dealer's name. Try it on any shoe. It will convince you that Barnyard shoes are what you need.

SPECIAL SALE OF PERCHERON and BELGIAN STALLIONS

FOR NEXT THIRTY DAYS

New importations arriving! Two large importations received since January 15th. Another importation of stallions and mares now on the water. More to arrive in April. We have at any time of the year more BIG-TON, HIGH-CLASS PERCHERON and BELGIAN stallions than any other firm in U. S.

HOLBERT HORSE IMPORTING COMPANY.

A. B. HOLBERT, Proprietor, - - - - GREELEY, IOWA

two mixture of cement and coarse sand. After the first year all of these roads were built in a single layer seven inches in depth on the average. This road was laid in twenty-five-foot sections with three-quarter inch expansion joints. On the surface of some of these roads was placed a wearing coat of three-eights inch sand and bitumen, using one-half a gallon of bitumen and one-ninth of a cubic foot of sand per square yard of road. The work was done by $1.75 to $2-per-day labor with the cement costing $1.07 to $1.32 per barrel and gravel seventy-five cents per cubic yard. Under such conditions the total cost of the highway would likely average something over $1 per square yard, exclusive of draining and grading. Under average conditions the Michigan road crews aim to build about 450 feet of roadway that is sixteen feet wide and seven inches thick per day. All Michigan roads that have been used for from one to four years show no bad effects from wear.

W. A. Freehoff.

Dane county, Wis.

LITTLE CORNER PLOTS.

To the Editor of The Homestead:

Many farmers throughout the country have little plots of ground ranging from one-half to three acres of land. These plots may be in a corner of a square field, but are cut off by an open ditch; or the field may not be square and a nook is left at plowing time for the reason that there is too much turning for the teams.

The main or the large square part of the field is planted to crops that can be planted and harvested with two or more horses and machinery. This part of the field is also given a rotation of crops. Not so with the little plot in the corner. If it is planted at all, it is planted to potatoes and sorghum. And this is done year after year with no rotation of crops. No thought of changing the kind of crops is given. Consequently the little plot of ground is "worn out" and, as time goes on, the yield of potatoes and cane grows less and less.

"What else can I plant there except potatoes and cane?" I have heard a farmer say. "I don't want to bother with more than one horse on a little patch like that."

Of course, the farmer meant the cultivating of the crop after it was planted. One need not plant only potatoes. There are other crops that can be cultivated with one horse. Cantaloupes, melons, pumpkins and cucumbers can all be cultivated with one horse better than with two. And where cantaloupe melons are planted turnips can be grown in the fall, making two crops off of the same ground in one season. It must be understood that the ground is to be well enriched with some kind of fertilizer, preferably stable manure.

I would not advise growing a variety of turnips that shade the ground to a great extent. A short-top variety is what is wanted in a melon patch, so that the sun can get to the melons. The seed of turnips should be sown just before the last cultivation is given the melons and plowed in. Cantaloupes can always be sold, if one has more than is needed in the family. The surplus can be sold to neighbors, or, if one has the time, they can be peddled in a nearby town or village and a great many nickels picked up in this way.

The turnips not needed for home consumption can be stored away until there is more time for taking them to market. They sell better in winter, and I have sometimes received more money per bushel for turnips than for potatoes.

Another paying crop is pumpkins. Years ago in some sections of the country one could hardly give away a pumpkin. It is different now since the canning factories are here. One finds ready sale for nearly all the pumpkins one can grow, whether a factory is near by or not. The pumpkins should be planted a good distance apart so that there is plenty of room for the vines. They will do much better planted in the open than planted among field corn, as is usually done on the farm.

Turnips should not be grown where pumpkins are planted. The gathering of the turnips will damage the vines of the pumpkins, which are more tender than cantaloupe vines. Late cabbage can be planted there, that is in the spaces where the vines do not interfere. The cabbage cannot be cultivated except with the hoe, and as it need not be harvested until the pumpkin vines are killed by frost, a good crop of pumpkins and sometimes a good crop of cabbage can be gotten from the same ground.

Many other crops for rotation and profit could be grown on these little corner lots, but I am writing for the farmer, not for the market gardener or trucker who is near a large town or city where no available land is allowed to go unproductive.

Jay M. Hummel.

Randolph county, Ind.

ALL-STAR CORN CLUBS.

An interesting phase of the corn club movement is the organization of "The All-Star Corn Club," composed of those who have won the championship of a state or district and all those who since January 1st of this year show a record of 100 bushels per acre at an average cost per bushel of not more than twenty-five cents. In addition to special privileges in agricultural work in the community, these members are also entitled to attend all meetings, banquets, socials, etc., of the districts state, and all-star clubs without written or special invitation.

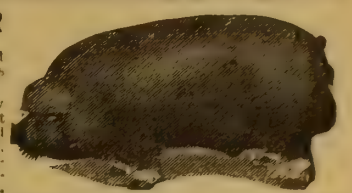
Members of all-star corn clubs are required to operate not less than two acres of corn and as soon as possible, their work should be extended to the more advanced studies in agriculture and farm management. Field studies in crop rotation, methods of soil building, seed selection, special seed-breeding plants, standardization of grains, cross breeding, ear-to-row tests, should engage some of their time and energy for each succeeding year.

The department of agriculture has in press a circular information concerning the organization of boys' corn clubs and instructions to the organizers. The circular is prepared for use in the northern and western states, where the boys' corn club work is supervised by the office of farm management. The rules and regulations governing the age, acreage, basis of award, methods of measurement, and general club requirements are the same in all states.

W. H. COOPER, LIVE STOCK AUCTIONEER

WE maintain one of America's greatest herds of strictly big-type Polands with big-type blood lines. We have in connection with it, one of the most complete plants for the business known. Twenty sows in our herd average over 650 pounds each including several yearlings.

50 HEAD OF BRED SOWS AVERAGED $65.00 in our February 4th sale, mostly gilts. We are booking orders now for June delivery, gilts and boars of this spring's farrow, at $20.00 and $25.00 each, out of these sows, which are of the biggest blood lines known, and sired by our big herd boars, including the great Big Expansion, weighing 800 pounds at two year old, and Big Bone 2d, and other boars of like breeding. Can furnish boars and gilts unrelated. Guarantee everything as represented or it may be returned and money refunded. Everything recorded free to purchaser.



W. H. COOPER, HEDRICK, IOWA.

NORTH & ROBINSON CO.,

IMPORTERS AND BREEDERS OF

PERCHERON, BELGIAN and SHIRE STALLIONS AND MARES.

50 HEAD of American-bred, pasture-raised stallions from 2 to 5 years old. The good rugged kind with plenty of bone, weight and quality. 40 head of American-bred mares. They are as good as grow. We always have a good assortment of imported stallions and mares weighing a ton and over. Next importation will arrive in February. Every day a bargain day at our barns.

Large horse calendar sent free to horse breeders and dealers.

NORTH & ROBINSON CO., Grand Island, Nebraska

TOO LATE TO CLASSIFY.

DE KALB'S HAMPSHIRES

300 HEAD in the herd. Anything you want in the Hampshire line. The best bred herd in America. Write me your wants. Address

CHICAGO & NORTH-WESTERN
CHICAGO, MIL. & ST. PAUL

A LIFETIME HAS BEEN DEVOTED TOWARD MAKING FOR ANOKA A NAME FOR ITS PRODUCTION UNEXCELLED IN ANY COUNTRY

Waukesha, Wisconsin, March 12, 1913.

DEAR SIR:

In last week's letter inviting attention to our public sale of Short-horns on Wednesday, April 2d, we called special attention to the fact that about 80 per cent of the offering is of Whitehall Sultan line of breeding, the greatest improving element in the Short-horn breed.

There is a broad demand for representatives of Cruickshank, Marr and other Scotch families of Short-horns, where they are topped out satisfactorily, and when the animals are as good individually as in pedigree. Whitehall Sultan breeding has had the desired influence in both these directions. Not only is this so in the Anoka Herd, but the improving influence of this line of breeding is evident at all important exhibitions of Short-horns.

The present offering from Anoka includes **fourteen** young and **high-class herd bulls** and **forty cows** and **heifers;** including eight head from Heart's Delight Farm, W. H. Miner, proprietor, Chazy, N. Y.,—undoubtedly the **best lot** ever offered from Anoka.

It is a Scotch offering with representatives of the Clipper, Venus, Victoria, Lavender, Aconite, Broadhooks, Village, Orange Blossom, Duchess of Gloster, Brawith Bud, Miss Ramsden, Missie, Maud, Roan Lady, Emma, Clara, Jenny Lind, Mayflower, Mina, Ury and Beauty tribes.

Immediate sires are Whitehall Sultan, Sultan Stamp, Leader of Fashion. Fond Memory, Whitehall Marshal, Glenbrook Sultan, Anoka Sultan, Sultan Mine, Royal Sultan, Ceremonious Archer, Best of Archers, Meadow King and Primrose Monarch, breeding that **insures individual merit** as the result; and that this is so we offer in evidence the well known show yard record of many individuals included in the sale, and the opinion of this paper's representative who has recently inspected the cattle, given in this issue.

We are anxious that you send for catalog and note the popular line of breeding of practically the entire offering and a comment on each individual, also observe the **class of sires used at Anoka,** and then do us the honor of attending the sale that we may be able to show you Short-horns that are as good as you would expect from their rich breeding.

Yours truly,
ANOKA FARMS, F. W. Harding, Pres.

April 2d, Anoka Farms, Waukesha; April 3d and 4th, Messrs. Sayer, Stanton and Hanna, Chicago. Auctioneers: Woods, Jones, Reppert.

SHORT-HORN CATTLE.

LYNDALE SHORT-HORNS

R. E. BALDWIN
Osceola, Clark Co., Iowa, on C. B. & Q. Ry.

Short-Horn Herd Bull

FOR SALE—**Earl of Linwood 306024,** roan, calved Oct. 22, 1907. Sire Matchless Robin by Imp. Cock Robin; dam Imp. Belle of Ordens. Earl of Linwood won 9 in class of 33 bulls at Chicago, 1908. Weighs 2,000 pounds in breeding condition. Absolutely sure, and has a kind disposition. Sires excellent calves. Also 13 months' old red calf for sale. Prices right. Address

F. P. GREENWALT & SON, MT. AUBURN, IOWA

Short-Horn Herd Bulls

LANCASTER SULTAN by Missie's Sultan and of the Lancaster family. A Sept. yearling by Rob Roy, dam Lady Annie 16th by Imp. Red Knight and a Nov. yearling, Missie by Scotch Sultan by Whitehall Sultan. All are herd bulls of Scotch breeding and priced right. We will sell Scotch cows and heifers at reasonable prices. Mention Homestead and write us your wants.

F. H. EHLERS, - - TAMA, IOWA.

ROYAL SOVEREIGN

ONE of the greatest Scotch bulls of the breed is the sire of the young bulls we have for sale. We maintain a herd of heavy-milking cows that are great feshers. We name farmers' prices on the young bulls. Write us. Address

L. Chestnut & Sons Geneva Neb.

THE FARMERS' SHORT-HORNS

MILKING SHORT-HORNS. Cows that have made a pound of butter a day under official tests. Bulls which carry strong milking strains and are good Short-horn types. Have extra good young stock from these animals for sale. Address

J. C. CHARLSON, - Leland, Iowa.

When writing to advertisers please The Homestead.

DISPERSION SALE ABERDEEN ANGUS CATTLE
THE WALTER ROBERTS HERD AT

ATLANTIC, IOWA, TUESDAY, APRIL 8th

60 HEAD---50 FEMALES, 10 BULLS---60

OWING to the death of Mr. Roberts, we are closing out his entire herd which is one of the best in the west. There will be **26 head of Blackbirds, 12 to 15 Trojan Ericas,** and the remainder will be **Queen Mothers, Prides** and **Heatherblooms.** Included will be the prize winning bull **Deceiver,** grand champion bull at Seattle; **Botna Valley Blackcap,** a 2-year-old Blackcap bull, **Black Pier,** a well bred Blackbird bull by Blackbird Barney, and several other well bred Blackbird and Erica bulls. There will be three imported cows, viz: **Imp. Elnora, Imp. Erebena** and **Imp. Percefoam of Stenhouse,** together with all the great cows that were sale-toppers at the leading sales the past few years. There will be **19 choice young heifers in the sale.** The best cattle from the most noted herds were purchased for the founding of this herd without regard to expense. Write for catalog and come to the sale which will be at the fair grounds adjoining the city of Atlantic. Address,

WALTER ROBERTS ESTATE,
ATLANTIC, IOWA.

Cols. Igo and Kraschel, Aucts. Please mention Homestead when writing for Catalog.

SAYER-STANTON SALE OF
100 SHORT-HORNS
CHICAGO, ILL., APRIL 3 and 4

10 Bulls are Listed, Including the Choice of Mr. Stanton's Great Herd Bulls, Browndale Sultan and Masterpiece.

An outstanding lot of SHOW and BREEDING FEMALES, the get of such noted sires as Masterpiece, Prince Imperial, Selection, Glenbrook Sultan, Linwood Favorite, Ceremonious Archer, Avondale, Faithful Archer, Superbus, Mayflower Prince, Villager, King Cumberland, White Sultan, Leader of Fashion, Whitehall Rosedale, and Cumberland's Ideal.

Cows With Calves at Foot and Rebred. Show Heifers. Breeding Cattle That Will Add Strength to Any Herd.

If you are interested in GOOD SHORT-HORNS this sale should certainly appeal to you. At no sale this year will so many good ones be offered, and the public is cordially invited to attend. The cattle must be seen to be fully appreciated. They are a richly bred, well conditioned lot of breeding Short-horns, the kind that every breeder needs. Write for the catalog. Mention The Homestead and address

THOMAS STANTON, WHEATON, ILLINOIS

Cols. Woods, Jones and Reppert, auctioneers. This sale follows that of Anoka Farms at Waukesha, Wis., April 2d, and precedes that of D. R. Hanna at Chicago, April 4th. Practically 200 head will be offered at these sales, the opportunity of the year to buy the right kind of Short-horns.

HANNA'S OFFERING OF VILLAGER SHORT-HORNS
CHICAGO, ILLINOIS, FRIDAY, APRIL 4, 1913

40 HEAD, 10 Bulls, Sons and Grandsons of the Great VILLAGER, 40

WE OFFER:

Village Primrose 2d, by Villager, the undefeated senior heifer calf of 1912.

Five other daughters of Villager that are outstanding propositions.

Ten show and herd-heading bulls, six by Villager and four by Village King.

All females of breeding age bred to Villager or his sons, Village Denmark and Village King.

More outstanding good things than will be presented in any one sale this season. You will admit this when you see the cattle.

Village Primrose 2d, the Undefeated Senior Heifer Calf of 1912, Included in the Sale.

THIS will be the largest offering of Villager blood that we have ever made. Every bull in the sale is by Villager or his son, Village King, and every female in the sale not sired by Villager is bred either to him or to his sons, or has calf at foot by Villager or his sons, so that no matter what you buy you are bound to get some Villager blood. This bull is today the strongest sire in the country. In last year's show rings he had to his credit the undefeated senior heifer calf and junior champion at the International, Village Primrose 2d, the undefeated junior heifer calf, Village Flower 2d, the undefeated young herd and the undefeated calf herd, an honor never before attained by any sire. You need some of this blood in your herd. Attend this sale. You will not be disappointed. Write for the catalog, mentioning The Homestead, to

JOHN GARDEN - - - - RAVENNA, OHIO

Cols. Woods, Jones and Reppert, auctioneers. Anoka Farms sell at Waukesha, Wis., April 2d. and George J. Sayer and Thos. Stanton at Chicago, April 3d and 4th. The Sayer-Stanton cattle will sell in the forenoon of April 4th and the Hanna cattle in the afternoon.

WHITE BROS.' SPLENDID OFFERING

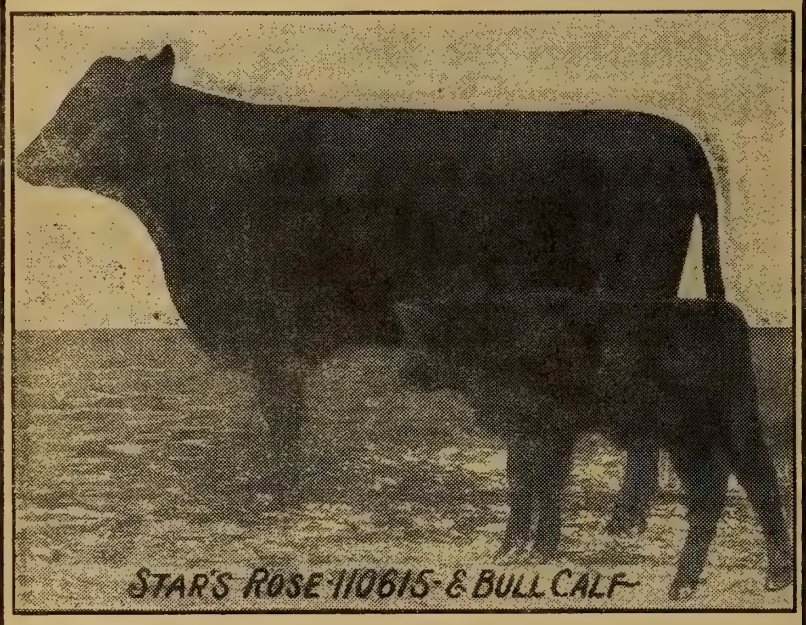
ABERDEEN ANGUS CATTLE

PERRY, IOWA, TUESDAY, MAR. 25, 1913

40 Head—10 Choice Young Bulls, 30 Cows and Heifers

BULLS—3 Blackbirds—one Blackcap, 3 Trojan Ericas, 2 K-Prides, 1 Queen Mother, 1 Pride of Aberdeen.

FEMALES—7 Blackbirds—three Blackcaps, 6 Trojan Ericas, 3 K-Prides, 5 Queen Mothers.



WE ARE selling 10 splendid young bulls that will do to head good herds, a grand good offering of well-bred females. Included will be Star's Rose, the great daughter of that famous grand champion cow, Glenfoyle Rose, and she sells with a splendid bull calf at foot. We have listed the best lot of **Blackbird, Trojan Erica, Queen Mother, K-Pride** and **Pride of Aberdeen** females that has ever left our farm. Eight of these will have calves at foot and others will be right at their calving to **Imp. Everett of Maisemore,** one of the best bred Trojan Erica bulls in the West, or to **Sunnyside Prince,** one of the best Blackbird bulls in the state. Write for catalog at once and come to the sale. Mention The Homestead when writing for catalog.

Fairfax, Iowa.

Percheron Stallions

ONE coming three, two coming two-year-old stallions, sired by 2,200-lb stallion, out of daughters of Georgiana, one of the greatest mares of the breed; won the blue at the Iowa State Fair; produced 13 living colts without a break, three of them state fair winners. They are a wonderful family of show horses, and sure breeders. These young stallions will all make better than ton horses. We are pricing them to sell. Address
WOODLAWN FARM, Sterling, Illinois.

DON'T WASTE TIME

EVERY spring your mares drop inferior colts you lose one more year of time in which to breed the stuff that pays. There's profit in Percherons because they are what's wanted. Don't delay. Investigate now I'll put my time against yours to prove you should.

Purchase Percherons.

Address or call upon me freely. Wayne Dinsmore, Sec'y Percheron Society of America, Union Stock Yards, Chicago.

Frank Iams' Draft Stallions and Mares

are **"up to the minute."** They are the **"drafty, big-boned type"**—**"nifty, big black boys"**—the **real "medal winners"**—sensational **"show and business horses"** of note, **"ripe peaches." Big, classy "peaches and cream" "black boys."** The **"Iams brand"** of **"top notchers."** Iams' **importation** of **Percheron** and **Belgian stallions** and **mares** are in the **"pink of condition"** and ready for a **"good selling." "Ikey boy,"** smile sweetly, and hundreds of Iams' satisfied customers **"will sit up and take notice"** that **Iams,** the **"king pin"** horse importer, is still **"doing business"** at the **"old stand." Iams** is **"pushing"** his horses to the front. The big **"peaches and cream"** "boys and girls" are **attractions** that can't be overlooked. Iams **mesmerizes** buyers with **"real drafters"** at **"bargain prices"** and having the **"horses as advertised."** Iams' **"competitors"** and **"hammer knockers"** are **"boosting** Iams" by their "knocks," until **now** he is **known** as the **"millionaire horseman,"** and on **"Easy Street,"** and growing fast. **Ikey, "buzz around" and sing Iams' song.** He is selling these **"aristocratic," fancy "black boys" cheaper** than ever—or **better** horses **for less money—$1,000 and $1,400** (few little higher). Iams has

"Ikey Buyer." Bea **"Wise Guy"** —Buy **"Show Horses"** of **Iams**—who has crossed the Ocean **50 times** for horses and **sold 5,444 Registered Horses, "Iams' 31 years of success"** make him a safe man to buy from at Special Low Democratic Prices. **"Everybody's Doin' It.**

80 PERCHERON AND BELGIAN STALLIONS AND MARES 80

They are **"model drafters."** They are 2 to 5 years old, weigh 1,700 to 2,500 pounds, 80 per cent blacks, 50 per cent ton horses. All **"registered," approved** and **inspected** by **governments** of **France** and U. S. and **certificates "stamped O. K." Iams** gives a **"certificate** of **soundness and health"** with each horse—signed by a **"Nebraska State Deputy U. S."** Many **Paris "prize winners"** and **"gold medal horses."** Big, **drafty "top-notchers,"** with big bone, quality, style, finish and **action to burn.** They are **"eye openers"**—larger and better horses than seen **elsewhere.** Big **"business propositions"** that make **"the wheels work fast"** under a **"buyer's hat." "Georgie, dear,"** Iams made a **"big killing"** by buying his horses in Europe. **"War scare,"** "bad crops," **"close money"** and **"Iams' cash"** caused the **"prize winners"** and **"tops"** to be thrown on the **market** for a **"good selling."—Iams "cut the melon"** and bought the **"rippers"** at **"knockout prices." Iams** will give his customers the benefit of his **"good buy." "Ikey boy," come on down town"**—see Iams—"Everybody is Doing It."

Get into Iams' "get rich wagon" and save $1,000 on a "top stallion"

(and you wear the diamonds). Iams is a **"big fly in the jelly"** in the horse world. "He keeps the gang guessing." **Iams** sells "imported horses only"—(they win 90 per cent of prizes at big horse shows). No **American-bred full bloods"**—no **"auction stuff"** or **"peddlers' horses"**—only **"choice drafters" of big size, bone, quality** and **finish. Iams** has the **"crack stallions** and **mares"** you **"read about."** Buy horses of **Iams** and you won't **"get stung"** in **horse** or **price. "Dolly D.."** waltz me around **once** again, **"Ikey,"** land me at **Iams' box office** and **importing barns.** Full to "the roof" with **"black boys"** (and all must be sold). **Reduced prices.** All the world knows Iams and his **"peaches and cream" horses.** 1913 **promises** to be a **bumper** year to **Iams** and **his customers.** He saved **$300,000 to stallion buyers in 1912. Watch "Iams' smoke."** Iams' 31 years of **successful business** make him a **safe man** to do business with. **Iams sells horses "on honor."** A boy or a lady can buy as cheap as a man. **Iams' 1913 horse**

Catalog is an "eye opener." It has a "laugh" and a $1,000

bargain in every line. A **"bunch of gold"** to stallion and mare buyers. It is full of the real **"peaches and cream"** stallions. It is the **finest, most elaborate and original up-to-date horse book** in the world. Iams, the **"square deal" horseman,** makes every statement in **ad** or **catalog good**—or you get the $500 he **hangs up. Iams** guarantees to sell you a **better**

Imported Stallion at $1,000 and $1,400

(few higher) than are sold to **stock companies** for $4,000. Imported mares, $700 and $1,000. Iams gives **60 per cent** breeding guarantee; **pays freight** on horse and **fare** of one buyer. He can furnish $1,500 insurance. **Iams buys** and **sells every stallion himself. Saves buyers $1,000 in middlemen's profits.** He buys stallions by **"train load."** He speaks languages—(saving 20 per cent). He is **not** in the **"stallion trust."** No **partners** to share profits. He **"pays cash"** for his horses—and sells **"topnotchers"** by **"hot advertising"** and having **"the goods." "Big Ikey,"** leave your "happy" home and buy a **"top"** stallion or pair of **imported mares** (of **Iams**) that bring colts that sell at **$500 each. "Papa,"** don't let those **"auction men" "hand you a lemon"** in one of those **"so-called" "American full bloods"** of **questionable breeding.** Buy an **imported horse** of **Iams,** the **"reliable horseman."** (Then we will **"all wear diamonds."**) **Iams** won't let you go without a **peaches and cream** stallion or mare. **"He sells the horses."** Iams' guarantees are backed by **"half million dollars."** References—1st Nat'l and Omaha Nat'l Banks, Omaha; Packers Nat'l Bank, So. Omaha; Citizens State, 1st State and St. Paul State Banks, **St. Paul, Neb.** Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

ST. PAUL, NEBRASKA

OUR FIFTH ANNUAL

30-Day Sale Starts March 1st

THE offering consists of a choice selection of imported and American-bred Percheron and Shire stallions and mares. We were never better equipped to furnish the most discriminating buyers with first-class stallions than we are at present. Our horses were imported last October. Are perfectly acclimated, are two and three years old, all dark colors, weighing from 1,800 to 2,200 pounds. The mares are of the large brood type of serviceable age and are in foal. We give our customers fresh, clean, sound horses each year. They are not stale from overfitting. They are the right type with plenty of size and bone. We sell our horses at prices any farmer can pay. We have a large assortment to select from. Every animal guaranteed sound and a satisfactory breeder. If you want the best at prices that defy competition do not fail to visit us before buying elsewhere. We have a few good aged horses that have been replaced with two year olds, sound and good breeders, that will be sold very cheap. Terms to suit any one. Come and see us or write today for full particulars. Homewood is conveniently located 23 miles south of Chicago on Big Four and I. C. R. R., with trains to and from the city every hour. Barns near station. Bell phone, Homewood 58 W. Address

S. METZ & SONS, Homewood Stock Farm, Homewood, Illinois.

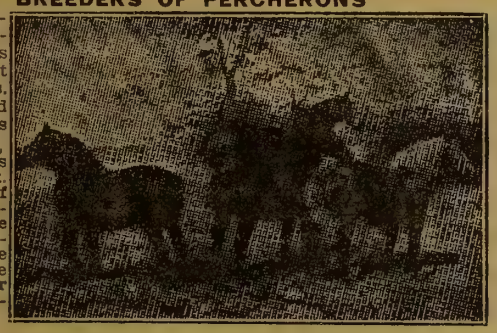
IMPORTERS AND BREEDERS OF PERCHERONS



Our new importation of 81 Percherons arrived in Fairfield September 18th. Forty weanlings will soon arrive, making about 125 imported stallions and mares. These with our 75 American-bred stallions and mares of all ages form a magnificent array of big, heavy-boned, sound Percherons from which buyers may select. We have by far the best lot of Percherons on hand at the present time that we have had since engaging in the importing business. We know we can please you in a horse and our prices are very reasonable. Visit us or write us for what you want, mentioning the Homestead.

STALLIONS THAT ARE RIGHT

PERCHERON, BELGIAN and GERMAN COACH.

Our barns are filled with seasoned horses of strong individuality, extreme quality and the highest breed type. We will price them at bed-rock figures and give you a guarantee that is different and more liberal than that of any other firm. You will save money if you investigate our plans and terms and see our horses. Mention The Homestead when you write.

PERCHERON, BELGIAN AND SHIRE STALLIONS AND MARES

GENTLEMAN, the time is at hand when you can no longer stand these scrub, blemished, mean dispositioned horses with bad conformation and loaded with fat. We have sold stallions to customers that like to get rid of that kind. They paid, big, long prices and you can now buy them for most anything you offer. Let us show you the right kind, from 1,800 to 2,200 pounds at the right price. Reliable guarantee and state inspected. We also have a few imported mares in foal weighing from 1,900 to 2,200 pounds. Will pay $600 C. O. D. to match them up. We were born and raised in France and appreciate good horses. Reference, 1st National Bank, Seward, Nebraska. Address

Home-bred registered stallions, $300 to $650; imported stallions and mares at reasonable prices. Come to a Real Horse Market and see more stallions and mares than at any point in America.

Reference: Any bank in Creston.

FRANK L. STREAM, Creston, Iowa

Please mention The Homestead when writing.

The Power Way

Gas power on the farm has changed drudgery into pleasure—losses into profits—increased yield by deeper and more timely plowing, and made a better way of living—it is making boys content with farm life, giving them a chance to broaden out, and not be limited by their own muscle or the inefficiency of horses—it is keeping boys at home.

The big argument to the tractor way of doing things is this: More profits, less labor.

Tractors plow deep—they draw upon more inches of soil fertility—they enable you to handle many times the acres you can with horses.

Tractors take up little room, don't eat on Sundays, and earn money every hour they work.

Tractors are tireless—you don't have to feel sorry for them, they'll work day and night, winter and summer. When you come in at night with a tractor, you're through. You don't have to start feeding, watering, etc.,—you just quit. The more jobs a tractor will do, the more money it will make for you.

RUMELY GASPULL LA PORTE

15-30

is a tractor that's worth while. It will do every job any tractor will do. It will go places and do work other tractors won't. It's so light, easily handled, and powerful you can depend on it for any work.

It is built for comfort, with a large, low, roomy platform and convenient levers. It is light for its power. It turns short, travels well on the road, and replaces 15 horses at the cost of 10.

There's power in the GasPull 15-30. It will do any power job—belt or field—on a moderate sized farm, and is a handy machine for the largest farms.

It combines strength, durability, convenience, power and pull—hauls 30,000 lbs. on roads not too hilly; has 15 drawbar h.p., 30 h.p. at the belt.

The new GasPull 30-60 is the larger size. It is a simple, practical, economical, allround tractor, built for work on large farms.

It has many distinctive features—steel gears running in oil—steel construction throughout. Light for its power, designed by a man with both engineering training and many years of practical expert and repair work in the field with every type of tractor, steam or gas.

Some GasPull Construction Features

Power Plant—The motor is of the two cylinder, four cycle, opposed type. The cylinders are so placed that the weight of the opposed cranks, connecting rods and pistons, is exactly balanced at all times. This, with the alternate firing of the cylinders, gives without use of a big, heavy flywheel, the smoothest running motor plant found in any tractor.

Cylinders—The cylinders are cast right with the crank case, guaranteeing perfect alignment and freedom from vibration.

Crank Case—The crank case is cast in two parts, and together with the cam shaft case, forms a dust-proof housing which prevents dirt and grit from reaching the cylinder or shaft bearings.

Carbureter—Standard carbureter used—practically self regulating.

Governor—Ball and spring governor driven by gears (***not belt***) direct from crank shaft. The GasPull won perfect score at Winnipeg for steadiness of running.

Valves—Are of drop forged high carbon steel, ground to uniform surface, valve seats also ground to perfect fit. Both intake and exhaust valves are located directly in the cylinder heads, eliminating cavities, securing full force of explosion.

Ignition—Jump spark ignition.

Magneto—Positively driven, insuring a hot, accurate spark, and so installed as to be a part of the engine.

Piston—Ten inches long, machine ground to perfect fit. Each piston carries three separate gas-tight packing rings, also machined and ground.

Cooling System—GasPull is water cooled—the gravity or thermo syphon system is used—one or two pailfuls of water per day keeps the radiator full.

Lubrication—Force feed oil pump with six plungers pumps oil through pipes, giving positive lubrication to every working part.

Covering and Cab—The entire machine is provided with a heavy galvanized iron hinged covering, which keeps dust and grit out of the machinery; the bonnet can be opened instantly.

General—Every part is made of the best material obtainable for the purpose. Gears, crank shaft, clutch, axles, etc., are all made with the same care and accurate workmanship—the frame is built of the highest grade channel steel, securely riveted.

Write for the GasPull Story—Data-Book No. 352.

PROSPERITY'S CORNER STONE

I WANT EVERY READER of IOWA HOMESTEAD to WRITE ME for MY CATALOGS

Wm Galloway

I want **you**—the man who is holding this paper in his hands right now—to write to me **right away.** I'm making a special appeal to readers of Iowa Homestead. I've got **something special** to offer every one of you. I know what kind of farmers read this great paper. They're **my** kind—the up-to-date, wide-awake kind—the kind I like to do business with.

You know what I've done in the **past—saved more money** for the farmers of this country and given them a **squarer deal than any other manufacturer.** That's why I've been able to build up a mammoth business here in so short a time. Now, **this** year I'm going to break all my own records. And I'm going to do it by putting some **special propositions** right up to the best farmers in the country. I'm going to make you some offers that are so amazing that you **simply can't get away from them.**

Over one hundred and twenty-five thousand farmers know by actual experience that

The Only Way Is THE GALLOWAY

And I want **you** to be the **next** one. I wan't to show **you** just what a man can do for you when he will sell you **direct from his own factories to your farm.** I want you to see **for yourself** what an amazing difference it makes in prices **when you don't have to pay one single middleman's profit.** Write me—you won't be under the **slightest** obligation. Just get this wonderful story. I'll show you how you can save hundreds of dollars in the next year alone. **I'll give you the evidence—then let you decide.** Send me the coupon, or a postal or letter, **right now.**

I'm Going to Tell You Some Inside Facts About My Business

I haven't any secrets about my business. The more my farmer friends know about my affairs the better I am satisfied. I've made good—but I know that every bit of my success is due to the fact that every single man who does business with me has found that *he can trust me absolutely.*

I'm a farmer myself—always have been and always will be. I was born and raised on a farm and I know what you're up against when it comes to buying right, *because I've been through the mill myself.*

That's why I got into this business. I used to sell farm implements for other people. I didn't keep at it very long because I saw with my own eyes every day the actual evidence that convinced me that the farmer simply couldn't get a square deal and his money's worth so long as he had to pay a lot of middlemen's profits which were always loaded onto the real value of the goods. Why, I could tell you of any number of cases where the profits were so much greater than the real value of the article that it seems almost unbelievable.

I made up my mind to see if the cheaper and better way wasn't to manufacture my own goods—making them just the best that they could be made—*and selling them direct to the farmers at actual factory cost with only one very small factory profit added.* I started out in a small way because I didn't have much money. But it didn't take long to prove that my faith in the intelligence and buying judgment of the men on the farms was founded on solid rock. My business has been tremendous right from the start. My profits have been small—smaller than almost any other manufacturer in the country. And I'm going to keep 'em that way. I'd rather make a small profit and sell a lot of goods than a big profit on a few goods.

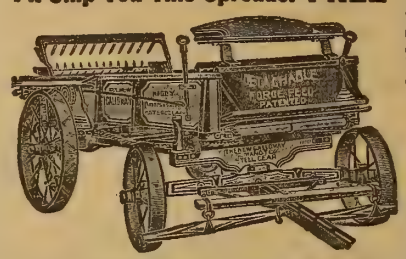
Of course, I've made enemies among the other manufacturers who tell me I am "spoiling business." I'm sorry, because I don't like enemies—but I am working to help you get your goods at a fair price. Naturally the dealers don't like me very well, either, for I stand in the way of their big profits. That's why a lot of them have gone out of their way to misrepresent my business. They can't do that very well any longer, now, for I've made a $5,000.00 Challenge Offer to any man or company in the world who can prove that every word of Galloway's story is not true right down to the last detail, or can disprove any statement or claim I make. I'll send you a copy of this challenge offer when you write me. Besides that, I protect every single man who does business with me with a $25,000.00 Cash Guarantee Bond that makes it just as safe for you to do business with Galloway as with the United States government.

Now, I want you to find out just what all this means to you in *cold, hard cash.* I've enlarged my line tremendously for 1913. I am offering *more* bargains and *bigger* bargains than I have ever been able to before. I want you to get the proof for yourself.

Now Send for My New Book of Bargains FREE!

I'll save you money on practically everything you need for the home, farm or family. When you see the amazing bargains—hundreds of them—that I am offering in this big 144-page book you'll say: "Well, I didn't think such things were possible." Farm machinery, tools, buggies, harness, clothing, furniture, house furnishings—everything at the same amazing, **rock-bottom prices** and on the same **wonderfully liberal plan.** You can't afford to be without this book one single day longer. It's FREE. Send for it right away.

Don't Send Me One Cent! I'll Ship You This Spreader FREE



Use It 30 Days On Your Own Farm FREE!

Not one cent down. No bank deposit. Keep your money in your own pocket. I just want you to TRY my new Spreader, *that's all.* Try it right on your own farm for a whole month FREE. Test it out as you wouldn't think of testing any other spreader in the world. Pile on the manure a foot and a half above the box. Put on all she'll hold! Take the fine powdered stuff or the toughest, heaviest, trampled-down, slough-hay kind from the calf-yard. If it's frozen, so much the better. Take it into your field, whip your team to a *gallop* and *slam it in gear!* Say, I know that's an awful test! So do you. A test no other manufacturer dares even suggest to you. But, do you think for a minute I'd ship you a spreader and let you abuse it that way if I didn't *know* it would make good? I know what I'm doing. I've made the same offer for seven years, and the Galloway today is better than ever. 40,000 farmers have proved it. Besides giving you the best spreader made at any price

I'LL SAVE YOU $25 TO $45

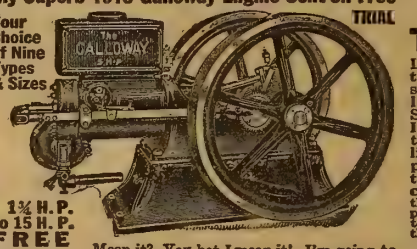
Try the Galloway and see for yourself what it will do. The best proof of all is the machine itself. Eleven patented features all exclusive with the Galloway. Double drive chains furnishing power from both wheels alike direct to the beater and moving the load. The only endless apron force feed, roller-bearing feed spreader built. Makes the Galloway worth $25 more than any other spreader sold today. Low down; easy to load; light draft, two horses will handle it easily. Pull between wheels entirely on the reach, and many other special features. I can't tell them all. Just get my catalog before you buy any other make or style of spreader. Nine different styles and sizes to select from. You are certain to find just the machine you need most for your purpose. Write me. Get my free Spreader Book and valuable FREE book of information, "A Streak of Gold". Write now, today.

Catalog and Regular $1.00 Book "A Streak of Gold" FREE

The only book of its kind in the world. It tells you, in clear, plain English, just the practical facts that every man ought to know about fertilizing. It tells how to handle manure, how to treat it, keep it and use it to the best possible advantage. Worth $100 to any business farmer. Regular price $1—Free to you when you write me. Be sure to send for this famous book today.

Three Months' Power FREE

My Superb 1913 Galloway Engine Sent on Free TRIAL



Mean it? You bet I mean it! I'm going to make you an offer right now that **you absolutely can not afford to refuse.** Listen to this: I'll let you use a genuine, 1913 Galloway Gasoline Engine right on your farm for a whole month absolutely free. If that isn't long enough, just say so and I'll let you keep it for a month or **even two months longer.** I'll let you pick out any one of my nine different models you want, I'll let you put it to any test you want. I want you to compare it point by point with any engine on the market, **and I don't care what the other engine costs.** I'll put the Galloway up against any other engine, absolutely regardless of the price. But, remember, when you buy from me, I'll save you $50 to $300.

Can you beat that? Never! I'll put the whole thing right square up to you. You handle the engine yourself—make it do your work day after day for one month, two or three. I won't send any salesman or dealer around to help you make up your mind. *I know I can bank on my engine and your judgment.* Your word *goes.* After you have had the free trial if you think that there is one other engine on the market at any price that is anywhere near the Galloway in quality, workmanship or actual performance, just send it right back, and *I'll pay the freight both ways, so you won't be out a single penny.* Or, if you find that the Galloway is so far ahead of your expectations that you simply can't afford to get along without it, you may keep it and on the squarest, straightest and most liberal offer that you or anybody else ever heard of.

Now, you can't beat that offer anywhere. No man living can go further than I have to show my perfect confidence in my goods and insure the *absolute satisfaction* of every man I deal with. My engines have got to be so perfect in every way that they *simply sell themselves,* that's all. My big, beautiful engine catalog is yours for the asking, FREE. Write for it today!

FREE SERVICE BUREAU!

I've got a bunch of engine experts that you can't beat anywhere in the country and their services are at your command *absolutely without charge.* They'll help you solve every one of your engine problems, tell you just which engine is best suited for your particular purposes, how to fit up your power house, how to handle your engine and use it to best advantage. This service is free to you always, whether you buy an engine from us or not.

Get My Engine Book and 90-Day Offer FREE!

Now don't miss this splendid offer. Don't lay down this paper—don't even turn the page until you have sent for this splendid Engine Book and full explanation of my new 1913 plan. Just fill out the coupon and mail it today—or drop us a postal. Find out the real facts about gasoline engines. Don't take anybody's word; post yourself! Send the coupon, or a postal or letter, for this valuable book and my Special Engine Offer, NOW.

Let Me Send This New Galloway Sanitary Separator On 90 Days' TRIAL FREE

I'm not even going to try to tell you about the sensational new Galloway Sanitary Separator. I couldn't. It's so far ahead of anything in the separator line that has ever been placed on the market that there is **simply no comparison.** It's the latest and greatest product of my factories and I am prouder of it than anything I ever turned out.

But I am not going to ask you to take my word or anybody else's word on the separator question. I am going to give you a chance to find out the real facts for yourself.

Listen: Right at the start

I'LL SAVE YOU $25 to $50

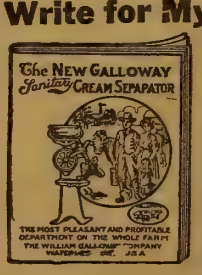
Then, I'll let you try my New Improved Galloway Sanitary any way you want.

I'll send you one of these wonderful new separators, any size you want, right to your farm for 30, 60 or 90 days' trial absolutely free. I want you to test it out every way that you can think of. Compare it with any other machine that you know of, no matter what the price. If anybody else is trying to sell you a separator, make them let you take their machine and set it right up by the side of mine. Take the skim-milk from one machine and run it through the other—that will tell the story! Then examine its wonderful patented features. See how *simple* it is—how *easy to operate* and how very, very easy to clean. See how perfectly it is made in every single part. And notice the new improved features that make it the most sanitary separator built.

Take a month if you want to or keep it two or even three months if you prefer. Then decide. I won't hurry or bother you in any way. If you think that there is any other separator in the world at any price that you would rather have than the Galloway, just ship it right back to me at my expense I'll agree right now to pay all the freight *both ways,* so that you won't be out a penny or under the slightest obligation. If you decide not to keep the separator after having had the free trial.

If you decide to keep it, I'll guarantee to save you from $30 to $50, besides giving you a separator that absolutely has no equal in the world at any price.

Write for My Big 1913 Separator Book FREE



Get my new 1913 Separator Book *right away.* Pick out the machine you want—tell me and let me send it to you for three months' use and *trial free.* I want you to have my new 84-page Dairy Cow Book. It's chock full of valuable information that will help you make your dairying more profitable. Regular price $1.25, but free to you if you send for my separator catalog. Just use the coupon or a postal or letter. Write me TODAY sure.

Fill Out the Coupon—Get My Four Great Books—All FREE!

I'm ready to put money right in your pocket. I'll **prove** that I can do it. You are going to buy **something** that I have to offer you, within the next few weeks. Get my prices—learn my plans **before you spend another dollar for anything for the farm or household.** I won't take a cent of your money until I have proved to you that every word that I have said to you is absolutely and positively true. You can use a postal or a letter if you want to, but the coupon is handiest. I'll send you any or all of my great books free.

GET MY SPECIAL 1913 PROPOSITION SURE!

I've been working on this plan for four years. **It's the biggest, finest thing I've ever offered.** I can tell you how you may actually get a Galloway Engine, Spreader or Separator **either partly or entirely without a cent of cost to you.** No canvassing or soliciting—no work at all. Just the cleanest and most liberal co-operative offer that you or anybody else ever heard of. I'll tell you all about it in a **personal letter** when you write for my free books. **Get this sure!** It won't take you a minute. It may mean hundreds of dollars to you this year alone. Write for the free books and my Special 1913 Proposition **before you do another thing.**

DES MOINES, IOWA, THURSDAY, MARCH 27, 1913.

Common-Sense Treatment of Dairy Cows

A Balanced Ration Sensible From the Standpoint of Animal Thrift and Pays Larger Profits Always.

EFFICIENCY in dairy cows consists in the ability to produce a maximum flow of milk and to bear good calves of the desirable quality and type. For the production of a maximum flow of milk the cow must be well fed; she must be maintained under conditions that make for quiet and contentment; all her energy must be devoted to the yielding of a large amount of high-testing milk.

HAPPINESS AND PROSPERITY IN THE YARD MEAN PROFIT TO THE DAIRYMAN.

Some milk producers barely supply their herds with a maintenance ration and yet they wonder why their animals do not produce more milk. The good dairy cow is usually an industrious worker; in case she is not furnished enough food materials from which to manufacture milk she draws upon her bodily resources and still continues her yield at the expense of her general health and vigor. The inferior and emaciated condition of many of our dairy animals is directly traceable to this cause. The cows will not shirk their work and so they continue the elaboration of milk from materials drawn from their own bodies. How can this condition of malnutrition be remedied? Simply by supplying the milking herd with liberal amounts of a balanced grain and roughage ration. It is cheaper in the long run to feed a cow up to capacity than it is to barely maintain her on a starvation diet, as her increased yield will more than pay for the additional feed as well as returning a net profit.

Too many, it must be admitted, feed an unbalanced ration that features the use of excessive amounts of corn stover and timothy hay supplemented with a surplus of ear corn. They endeavor to correct the deficiency in quality of the ration by supplying the herd with an abundant quantity of this unbalanced ration. They cannot understand that a deficit of protein cannot be balanced with a surplus amount of carbohydrates or fat. They fail to appreciate that there is a necessary connection between the nutrients in the feed and those in the milk. They seem to think that the cow is a machine that can turn any sort of raw material into milk. If a cow were fed carbohydrates only she would die in a short time; if she were fed fat only she would die in a short time; if she were fed protein only she would finally die as a result of poor nutrition.

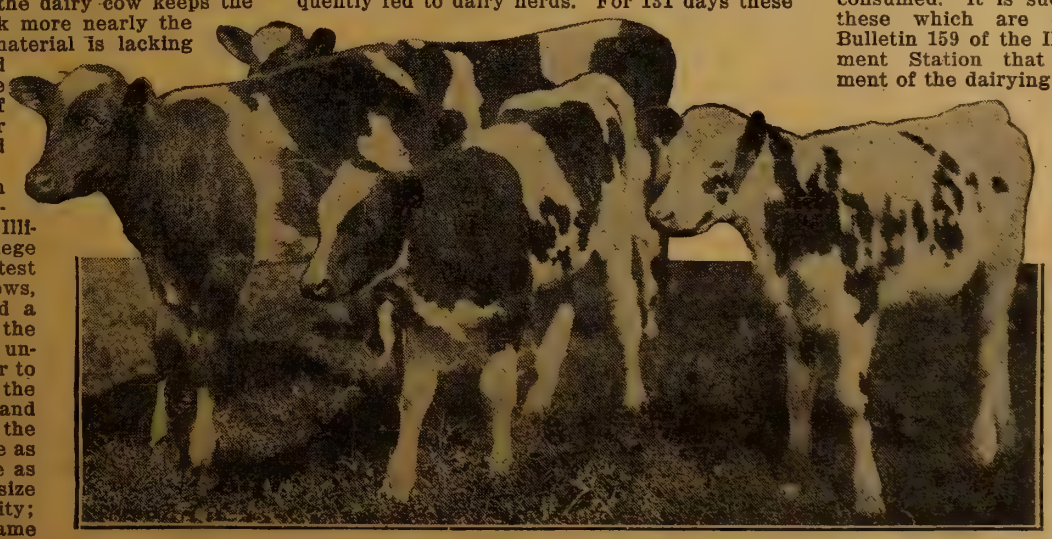
It is on account of the cow's need for certain amounts of carbohydrates, fat, and protein for the continued manufacture of milk that she is fed what is called a balanced ration. A balanced ration is one in which each of these food materials is present in just the right proportion and amount to meet the needs of the animal. Unlike the mason who in case he is short of cement can use more sand and build with a poorer mortar, the dairy cow keeps the proportions in her milk more nearly the same and when one material is lacking the milk flow is limited by the deficiency of the element irrespective of how much of the other materials is at hand and available.

In order to obtain some definite, brass-tack information the Illinois Agricultural College recently conducted a test with twenty dairy cows, ten of which were fed a balanced ration, while the second ten received an unbalanced ration in order to determine the effect of the feed on the production and physical condition of the animal. The cows were as nearly alike as possible as regards production, size and general dairy quality; they were kept in the same barn and managed exactly alike with the exception that they were fed on different materials. Previous to starting the feeding trial the animals had all been fed the same well-balanced ration of clover hay, corn silage, bran, corn meal and Buffalo gluten feed. On this ration all the cows produced well and were in good flesh and physical condition at the beginning of the experiment.

The animals in Lot 1 received daily thirty pounds of corn silage, eight pounds of clover hay, four and two-thirds pounds of gluten feed, and three and one-third pounds of ground corn. This constituted a balanced ration that contained one pound of digestible protein to six pounds of digestible carbohydrate and fat. This ration was thought to be particularly adapted for cows yielding about forty pounds of milk daily. Lot 2 was fed thirty pounds of corn silage, five pounds of timothy hay, three pounds of clover hay, and eight pounds of ground corn per animal per day. This ration contained but one pound of digestible protein to eleven pounds of digestible carbohydrate and fat; which is far too low a proportion of protein for even a dry cow; yet such unbalanced rations are frequently fed to dairy herds. For 131 days these two rations were fed to the respective groups of dairy animals. At the termination of this period the animals that had received the balanced ration were in an excellent condition, while the cows that had received the unbalanced ration had greatly depreciated in vigor, flesh and condition. The lack of protein in the ration and the lack of palatability in the timothy hay which caused the animals to eat relatively little of it explain this depreciation. Cows fed such unbalanced rations can neither keep in good physical condition nor can they consume the necessary large quantities of feed which go with bumper milk production. During the first week of the test the cows receiving the inferior ration produced 5.8 pounds of milk per day less than did their well-nourished mates; during the seventh week this difference in daily production was increased to 13.2 pounds while the last five days of the trial it amounted to 12.2 pounds of milk per animal per day. The average difference per cow per day for the nineteen weeks was 10.65 pounds, and the total difference in milk between the two lots of animals was 12,553.2 pounds of milk. In other words, six and one-half cows receiving the balanced ration produced as much milk as nine cows that were fed the unbalanced menu. Ten thousand, five hundred and eighty pounds of milk at $1.50 per 100 would be worth $158.70, the loss on nine cows for 131 days, which is $17.63 per cow, or practically thirteen cents per cow per day. And in the face of these results many of us wonder why our dairy herds are unprofitable when the animals are being ill nourished on unbalanced rations. It is noteworthy that in this test the cost of the two rations was practically the same. The results as regards fat production were analogous with those obtained in total milk yield. Lot 1, which was fed the balanced ration, produced 359.56 more pounds of fat than did Lot 2, which was fed the unbalanced ration. Figured at twenty-five cents a pound this amount of butter fat would be worth $89.75.

TYPE COUNTS FOR MUCH.

The total amount of feed consumed by Lot 1 was 59,840 pounds and that used by Lot 2 was 52,720 pounds, which indicates a difference of 7,120 pounds or 13.5 per cent. Despite the fact that Lot 1 ate the more Lot 2 had the advantage in that its ration contained a higher percentage of grain. However, Lot 1 consumed 12.5 per cent more digestible nutrients than did Lot 2. In consequence the animals in the latter group produced a portion of their milk at the expense of their body weight and general condition. Hence the fact is developed that the animals receiving the balanced ration were able to consume 12.5 per cent more nutrients and as a result were able to make 33.7 per cent better use of the total nutrients consumed. It is such conclusive results as these which are described in detail in Bulletin 159 of the Illinois Agricultural Experiment Station that make for the improvement of the dairying industry. It is hard to believe that any one knowing of the striking difference found by this experiment will continue to feed an unprofitable and unbalanced ration to his dairy matrons. Under existent conditions where intensive management and common-sense practice are pursued the dairy farmers of Wisconsin, Illinois, New York, and the other milk-producing states should be reaping attractive returns from their milk farms. Let us hope that the 10,000-pound milk cow has come to stay. Let us work for a greater



WELL-FED CALVES MEAN NORMALLY DEVELOPED DAIRY COWS.

RUSHING HORSES INTO HARD WORK.

Whenever spring is late in coming and field work cannot be started until after the usual time, there is quite a tendency to rush into work with a vim when the fields do get in condition. In the hurry to get spring grain sown and started and something done towards getting corn ground in shape for planting, a great many farmers forget all else, horses included.

Everyone knows that the horse wintered in the usual way is unused to heavy work when spring comes. As the saying is, he is soft. A man gets that way himself during a winter of comparative idleness, and should he be put into hard work with a rush and kept at it from early morning to late at night, no doubt he would suffer the ills, the lameness and soreness that many horses suffer that have been "shoved into the collar." Although the need of pushing the work with all haste may seem necessary at the time, we find, a little later on in the season, that a day lost has meant very little difference in the crops. It takes a great deal of pushing ahead to gain a day in two weeks of time spent in the field, so we see that what is gained by half-crippling the teams in the rush of spring work really amounts to little in the end, except that the horses still show the effects of it and may always show it to some extent.

Paying little attention to the horse's shoulders is often responsible for much injury during the spring working season. Shoulders are soft and need toughening to the collar. This must be done as easily as possible and with a collar that fits. A little carelessness in this regard may even put a horse out of use for several days, or put the shoulders in such condition that it is inhumane to keep on with the heavy work. A merciful man is merciful to his beasts.

CONSERVING HUMAN MUSCLE AND NERVE FORCE.

This paper will ever be found advocating the easy way to bring things to pass in home or farm affairs. After all, the supreme good that can come from the application of science to practical farm affairs is in the lessening of the amount of labor involved in the performance of given tasks. To this end we commend the foresight exhibited by a Nebraska subscriber as given in the following communication:

We came to our Nebraska ranch about two years ago. Before that time one family had lived here for thirty years. During those thirty years no one can estimate how many hundred pails of water were carried from a never-failing spring which is located down hill from the house and fully a block distant, necessitating carrying water up a steep hill for a block. Immediately above the house and about the same distance was another spring fully as large and never failing. This spring was allowed to overflow the hill and garden and run down into the yard, in the springtime making a constant stagnant mudhole between the house and barn.

The first year we allowed things to go on just as they had for the thirty years previous. The second year the husband complained of carrying so much water up hill, especially on wash days. The wife complained of having always to tell him the bucket was empty. They both complained of the constant, stagnant mudhole. Complaining brought about thought and thought instigated action, which led to investigation. Consequently we now have the upper spring piped into our kitchen and a sink and drain are installed. The drain runs directly to the creek below the house. The spring is high enough above the house to force a large stream at all times and without outside force, such as engines, etc. On cold nights the water runs all night to keep it from freezing.

My husband and his hired man did all the digging and plumbing—during the winter, too—the only cost being for pipes, sink and faucet. Just now they are extending the pipes to the hog house and barn. What this will mean when thirty sows have their young in the spring only those can know who have carried water and slop to that number. Our achievement is the wonder of the neighborhood. Many come to see and investigate it. The old timers who live along the creeks and have springs all about them are becoming interested and investigating their own conditions. We therefor expect before many years to see many of our neighbors with the wonderful soft spring water at their command by turning the faucet.

While it may be true that those who have access to living springs for their water supply are in the great minority, yet out of practical experience we can most strongly endorse the expenditure of any reasonable sum of money so that water in the home is convenient at all times as well as the supply for live stock. In this day of windmills and gasoline engines and underground pressure tanks and inexpensive water towers there is little excuse for carrying water up hill to the home or, indeed, for doing any carrying at all. The installation of a good water system, we believe, will do more than can be accomplished by the same amount invested in any other way to cut out drudgery in the home as well as in the choring part of farm work. We hope that the above communication from Mrs. F. B. Heilman will be the means of stirring many of our subscribers to some kind of action that will accomplish the result brought about in this case.

RAPE A PROFITABLE CROP.

An Illinois subscriber, who has had considerable practical experience in growing rape, gives his views on the value of this crop in the following communication:

Rape is not as generally grown as it should be. It can hardly be surpassed as a pasture and soiling crop for hogs and sheep, or even for cattle, especially when a quick-growing, annual crop is desired. It offers summer and fall pasture of the highest order with spring seeding, something that can be claimed for very few other plants. It can be grown on almost any soil that will produce a good crop of roots, and can be depended upon to furnish very heavy yields of most excellent food.

In feeding value it is quite as good as clover, and can be used for either growing or fattening purposes with success. Rape is a feed that stock like exceedingly well after they have once become accustomed to it, and the results from its use are always pleasing. These facts I would not dare state had I not had experience in growing and feeding this plant.

Rape can be sown any time after spring weather has permanently arrived, as early as most all grain crops, and thereafter until the end of summer. This wide range of seeding allows almost continuous soiling from this one crop from early summer to the end of autumn. The plant usually requires from eight to ten weeks to complete its growth. It may be fed or pastured as soon as its development will justify, and if not cut or pastured too closely it will grow up a second and even a third time.

In seeding the crop broadcast, from three to five pounds of seed are required to the acre. If sown in drills, from one to two pounds of seed will be sufficient. The quality and condition of soil will govern the exact amount, lighter seeding being used on rich and clean ground. The condition of the seed bed should be fine, firm and moist. A light top dressing of manure may be applied and the crop responds very readily to such treatment. As a soiling crop it is desired to secure all the growth possible, so the more perfect the conditions are made the greater will be the results.

There are several varieties of rape, but the one which possesses the most economic value is the Dwarf Essex. The seed may be secured from most, if not all, seedsmen. The crop is worthy the attention of any farmer who wishes a good supply of valuable summer soiling feed.

Rape is an ideal crop to grow in feed yards and small pastures adjacent to the farm buildings. We have in mind one instance where for five years in succession an eight-acre field sown to rape pastured from fifteen or twenty brood sows with their litters. In addition to this, young cattle were pastured on this field for a considerable period during the late summer and fall months. Where it is the intention to hog down corn an ideal plan is to sow rape early in the spring so that the hogs can alternate between the corn and the rape field. This plan contributes wonderfully to the thrift of fattening shoats and it also lessens the cost of making a pound of gain.

WHAT INTELLIGENT ROTATION CAN ACCOMPLISH.

Although plans for the 1913 cropping system are now mature it may not be amiss to call attention to the natural advantages that come as the result of carrying out a sensible system of rotation. The subject is presented in the Wisconsin Institute year book by Mr. Fred Stubley, who, among other things, says:

Intelligent rotation can be made to accomplish many things that are not secured by the haphazard methods now employed in this country. If systematically carried on it can be made to destroy a large number of troublesome weeds. If, for instance, a three-year rotation is practiced for a few years, the land can be nearly cleaned of weeds, providing one is careful in selecting the seed sown and no weed seed is carried to the fields in the manure, and the same practice will dispose of the wire worm and white grub. This short rotation not only tends to clean the land, but also improves its physical condition and conserves and adds nitrogen and humus to the soil.

To preserve the productive power of the land, fertilizers or manures must be applied or the rotation will not give the highest results.

Rotation may be made to economize plant food. Since plants vary in their power to reach and appropriate nourishment, the rotation may be so arranged as to grow those plants which have the least power, or those which make but little demand on the soil when the land is least fertile.

The fertility in a wise rotation is used, not carried along as useless capital. Successful agriculture consists quite as much in taking fertility out of the soil judiciously as in putting it into the soil.

In planning a rotation where circumstances allow freedom of choice, the object should be to change inorganic elements into organic substances, that is, to get the largest possible crops with the largest net results. Nature provided plants to feed animals, animals to produce fertility, fertility to feed other plants. This rotation preserves the elements of the productive power, while they are continually changing their form and character.

In addition attention should be called to the advantage in rotating crops that comes from the destruction of insect pests. This is true in the case not only of the cereals, but it is doubly true when corn is the main crop. In such a case the corn root worm multiplies year by year its devastations resulting in systematic root trimming late in the season and in turn causes the crop to lodge. We concede that it has been a little difficult to carry out certain plans during the last two years on account of the high price of clover seed, but the situation is being met in some instances by a change from corn and oats to winter wheat. Although wheat is in the list of soil-robbing crops, yet a change of this character is more to be desired than is the lessening of the crop which comes from rank weed growth or injury from insects.

BENEFITS AND PROFITS FROM DRAINING LAND.

In a farmers' bulletin recently published by the United States Department of Agriculture the question of farm drainage is discussed in its various details. Among other things mentioned is the enumeration of the benefits that are ordinarily derived from the draining of land and the estimation of probable profits. According to this bulletin drainage makes lands that are uncertain in production produce crops every year. It brings into cultivation lands otherwise worthless. Not only can swamp lands be made tillable, but on farms where there are places too wet to cultivate drainage will improve the land and cause it to produce good crops.

Drainage improves the physical condition of the soil by making it more granulated, porous and friable. Thus, stiff soils are more easily handled, the plants have a greater feeding area, and the available moisture in the soil is increased. Soils also absorb more of a rainfall, thereby decreasing erosion and damage by floods.

Drainage warms the soil. The evaporation of moisture by the sun requires heat which, if the excessive moisture is removed by drainage, is used in warming the soil. This is noticeable in the North, where the planting season is from one to two weeks earlier on drained than on undrained land. The danger of damage by frost both in the spring and in the fall is reduced. The warming of the soil by drainage causes the seed to germinate more readily, thereby giving a better stand of crops and causing the plants to grow more promptly.

Drainage aids in the preparation of land and the tillage of crops. Land can be plowed earlier in the spring and is better pulverized. Crops can be cultivated sooner after a rain and by closing small ditches with tile drains more improved machinery can be used and the cost of cultivation decreased.

Drainage improves the health conditions. Perhaps there is no better illustration of this than the number of mosquitoes that were found in parts of Illinois and Iowa when first settled. When the land was drained most of the breeding places of the mosquitoes were removed and with them the consequent malaria.

It is not uncommon for lands too wet for cultivation to produce when drained sixty to seventy bushels of corn and oats or from one bale to one and one-half bales of cotton per acre. On a great deal of land the increase in yields is often from 25 to 100 per cent. In some years on some wet soils drainage may not pay, while on others it may be necessary in order to save the entire crop. By increasing the yields and decreasing the cost of cultivation, the profits and the value of the land are often doubled.

We have met thousands of farmers who have used tile drainage, but in no instance where the work was properly done has he found anyone dissatisfied. Farmers in the east who have used tile drainage state that it is one of the most profitable investments made on the farm. A planter in South Carolina with three years' experience stated that tile drainage had made land that never produced a crop before grow heavy crops of cotton, corn, oats and cowpeas, and on the other land had increased the yields and decreased the cost of production.

Perhaps the situation is best summed up, however, in the following statement of a farmer with thirty-two years' experience in Illinois who owned 1,000 acres of land, all of which he had drained: "On soils needing drainage, no farmer can afford to be without it."

CARE NEEDED IN APPLYING FRESH MANURE.

Little advice is needed along this line by the man who operates a manure spreader. These machines do the work of spreading so completely that the only precaution that need be taken is to use only a light coating on thin lands. In applying fresh manures with a fork on lands that are sandy in character more harm than good can be accomplished the first year by using it too freely. Rough manure plowed under only increases the porosity of such soils, thereby making them so loose that under ordinary circumstances they are apt to dry out.

Even on the loams and in some instances on clay soils the plowing under of a heavy coating of coarse manure will not accomplish the first year what it is intended to accomplish. In such instances the manure acts as a blanket beneath rather than above the surface-feeding rootlets. This being the case capillary action is largely confined to the lower soil, the channels being broken by the rough manure so that the moisture supply cannot rise to the surface. We repeat that the danger of doing harm in this case is not very great where the spreader is used, but we have known instances where a corn crop has been cut squarely in two by applying fresh manure heavily instead of increasing the crop as was the original intention.

It is a well-known fact that the rotting of farm-yard manures means that from one-third to one-half of the weight of the humus material is lost and it frequently happens that almost the same percentage of the fertility element disappears as the result of the decomposition process. This being the case the sensible thing to do is to more and more adopt the policy of getting the manure to the field in fresh condition, particularly so where lands are almost level, but as said before, the precaution against plowing it under in too large quantities must be taken and on the other hand the loss from the rotting process should, wherever possible, be avoided. The matter sums itself up into the necessity of

applying it thinly and of keeping it as near the surface as possible because of the tendency of the fertility elements to leach beyond the reach of the the busiest feeding rootlets.

ENDORSES LIVE STOCK FARMING

An Illinois subscriber points out some of the natural advantages that characterize a system of farming that includes live stock raising as combined with grain growing. Among other things he says:

The farmer who does not grow stock can hardly feel that he has attained the full dignity of his occupation. There is a charm about a herd of carefully selected cattle; few living things are more graceful or pleasing to the eye than well-bred horses, the shepherds' flocks have been with us since the beginning, and the grunt of the fat porkers is satisfying to the farmer's ear.

The stock raiser is a man of affairs. The business demands good judgment and quickens the powers of perception. His interests and inclinations take him beyond the confines of his own fields to the markets of the world where he comes in touch with the shrewdest men in the business, thereby broadening his horizon and widening his experience.

To maintain soil fertility one must return to the land those elements which have been extracted by the crops. The best way to do this is by applying barnyard manure. The farm that is well stocked has the fertilizer at hand when the time for application arrives. So the profits from stock growing are twofold. They bring good returns in dollars and cents and leave behind them valued fertilizer.

Some farmers will reach success with one kind of stock, some with another. All men are not successful with horses or cattle or hogs or sheep. A few men will fail with any kind of stock. They lack the touch that makes it profitable. The farmer must determine, and largely by experience, the kind of stock he can handle on his farm most profitably and make a specialty of that kind. A man must have a love for the work and the kind of animal he handles if he would make a large success of the business.

It cannot be denied that the care and management of live stock calls for a very different kind of talent than is put into play under a system of straight grain growing. In the very necessity of the case a stockman becomes a student of blood lines and this applies whether he handles pure-bred stock or not. He very quickly learns which are his best breeding cows and which are the most profitable brood sows or the best mares and if anything like good sense is shown, the poor ones are gradually weeded out and the best ones retained. The carrying out of this policy we claim contributes to better manhood and it creates a more wholesome atmosphere in which is reared the farm folks of the future.

BE SURE OF THE SEED CORN.

We would like to jog the elbow of every one of our readers and ask about the condition of the seed corn. The subject has been a dead one this spring inasmuch as it has not been the topic of much discussion in the public press. Whether the excellent condition of seed corn generally justifies this indifference remains to be seen, but for our part we propose to admonish our readers lest an unwarranted degree of confidence in the soundness of seed should lead in the end to an enormous loss.

To see a farmer with a pair of horses that may be worth $400 or $500 spending his time cultivating half a stand of corn is a sight that does not inspire respect for the business judgment of the fraternity as a whole. This simply means that he throws away practically half of every day's labor and someone has called attention to the fact that in doing so those who care for the household waste half of their time in preparing food for such an individual. Knowing as we do the strenuous character of farm work during the spring and summer months we cannot help but regard it almost in the light of a tragedy if day after day men are to spend long hours in the field and to end up by running chore time well into the night if in the end the fruit of all this labor must be cut squarely in two by a little indifference at the beginning of the season.

We are in favor of giving the seed corn a good test. We believe in testing it in the ear just as much as we have ever believed in that policy, even though it is not talked about as much as formerly. If a man has 1,000 ears saved for seed it will only take a few hours to put six kernels from every ear in the tester. In a week if conditions are at all favorable for growth the weak, dead and strong kernels will show up, thereby giving opportunity to discard the weak and the dead and for saving those that are strong. The results will justify putting this amount of labor on it, even though only fifty ears out of 1,000 are discarded because that in itself would mean the loss of three or four acres. We believe that an actual test will demonstrate that the corn is in much better condition than it was last year, yet there is always enough weakened seed to justify making a good test.

DESCRIBES IDEAL SEED BED FOR CORN.

Those who have taken pains first in selecting good corn and secondly in giving it a thorough test, can well afford to carry the matter one step further and put the seed into well-prepared ground. What constitutes a well-prepared seed bed might in its minor details be the proper subject for debate, although the fundamental principles involved in preparing the seed bed we believe to be agreed to by all good farmers. These principles are outlined by a Missouri subscriber, who says:

The importance of properly preparing the seed bed for corn cannot be too strongly emphasized, for the success of the crop depends to a very great extent upon the rapidity and vigor with which the seed starts into growth. Corn gets the right kind of a start when planted in fine, mellow, soil, rich in plant food, and supplied with a moderate amount of moisture. The seed will not germinate readily if placed in coarse, lumpy soil.

If the corn is planted in a fine and mellow seed bed, germination takes place quickly, and the young plants get plenty of food, because the roots come in contact with more of the fine earth particles, on the surface of which the moisture and plant food are found. When the young plants are thus situated they are able to withstand adverse climatic conditions.

A very large proportion of corn this year will be grown in ground that was in corn last year, or, in other words, on cornstalk ground. It is in the management of this ground that some farmers fail to produce as good results as they desire. The proper thing to do with cornstalk ground is to first cut the stalks with a stalk cutter, and then disk the ground at the earliest opportunity, as a preparation for plowing. This may be new doctrine to some, and I will, therefore, go somewhat into details, showing why I recommend it and practice it on my own farm when I intend planting corn on land that produced a crop of corn the previous year.

After the frost has gone out of the ground in the spring, and two or three heavy rains have come, if dry weather follows, a crust will be formed on the soil. This evaporates the water far more rapidly than many who have not had a good deal of experience and been a close reader and observer will believe. Of course, some one will say, what's the difference? We have plenty of rain, plenty of water in the soil, perhaps too much. Why do you recommend disking the soil before plowing?

For three reasons: First, to prevent clod formation; second, to restore the connection between the plowed furrow and the under soil, and third, to kill weeds.

The question may be asked, "How does this prevent clod formation?" Go into a disked cornfield, especially if the land is heavy and has a super-abundance of moisture, along in April when the weather is warm and a southwest wind is blowing, and notice how the cornstalk land is cracking. It is losing moisture very rapidly, therefore shrinking, drawing apart, leaving cracks in which a man could put his hand, and small cracks even in drier soil. Now, when this land is plowed without disking, these cracks simply form the outlines of many troublesome clods.

Corn, as well as the other grains, requires a solid seed bed, which is made by cultivation after plowing. The main use of the disk and harrow is to compact the lower portion of the furrow slice and to throw loose soil on top, in which the seed will find easy germination.

While this is being done weeds are germinating, and by subsequent operations, they are being killed; which, if left alone, will bother all summer long and rob the soil of much available plant food.

It would be difficult to place too much emphasis on the importance of some of these suggestions, particularly in regard to the disking of corn ground preparatory to plowing it. It must be remembered that corn ground well disked before being plowed is much more easily brought into a firm, fine condition with a harrow or other types of tillage implements after it is plowed than if the baked surface is turned under and made to form the bottom of the furrow slice.

We endorse the idea here advanced that a mellow seed bed contributes to the rapid growth of the young roots and leaves because a crop that makes a strong start is invariably the one that maintains its lead throughout the growing season. If hardship comes it in variably means that the backward crop suffers most.

SHARING IN THE FARM PROFITS.

From time to time various phases of the farm help question have been discussed in these columns. Year after year we have witnessed the growing scarcity of labor and up to the present time the only solution we have to offer is that sufficient farm assistance can be obtained only by the employment of men with their families. In other words, we claim that there are plenty of men in the towns and cities who would make efficient co-laborers with farm owners and tenants. Where this plan is followed, of course, it means the building of a second home, but those who have tried this plan have found that it results exceedingly well. An Illinois subscriber, Mr. C. W. Bridgford, takes up the subject from another angle when he says:

Our plan for getting and keeping help is to pay current wages and in addition give a share of the profits of the farm. This gives each man a personal interest in the success of the enterprise and if we make nothing more than wages we do not have to pay any more. Going back to the old "cropper" precedent, labor is entitled to one-third of the products. At the beginning of the year all personal property pertaining to the farm is appraised at a fair cash value. And on this amount interest is computed at 6 per cent. A record is kept of sales and purchases, and another inventory at the end of the year shows the net profit. If the wages of the men do not amount to one-third of this sum, the balance is paid over to them as profit. This arrangement results in plenty of interested labor and prevents "mining" the farm by tenants. After several years' trial this plan has proven entirely satisfactory.

After all, this plan is nothing more nor less than the paying of maximum wages resulting as it always will in obtaining the most efficient among those who are available as employes. Let it be known in a community that any individual farmer is a good manager and an agreeable employer and that he pays good wages and it will generally result in the best talent going in that direction. If some such system as here suggested by Mr. Bridgford will stimulate interest in farm affairs, well and good, though we can imagine cases where the arbitrary one-third would be entirely out of proportion. As to the establishment of a minimum and maximum wage there is no question but what it will lead to better results if good work under certain favorable season conditions can result in greatly increasing productiveness, a part of which means increased compensation for the workman.

ESTABLISHING A MEADOW.

A small fortune was thrown away by the farmers of the corn belt in their efforts to establish meadows during the last two years. We know of instances where individuals invested hundreds of dollars in clover seed and today they do not have a solitary clover plant as a living testimonial of the expenditure. This sort of thing becomes monotonous in time, amounting in many cases to a real burden. Not only is there the loss of the value of the seed, but the failure means a breaking up in the rotation system requiring in many cases the growing of the same crop on the same land year after year. There is only one outcome to this, namely that eventually soils will tend to grow more weedy and insects will increase even more rapidly.

Now the question comes up, what can be done to relieve the situation? We believe that it is an appropriate time for farmers to do a little experimenting, it being our opinion that the sowing of clover and timothy much in the same manner that alfalfa is seeded in the fall at the present time will be entirely practicable. In the first place, red clover is just as hardy as alfalfa and furthermore if it is sown under similar conditions it will make almost as rapid growth the first few weeks as alfalfa.

We are not going to suggest that this plan be tried out on a large scale in the first place, although we have known a sufficient number of cases where this method worked well to justify us in rather urging the plan on our readers in a sort of experimental way.

The special method of sowing need not be dwelt on at this time because the plan to be employed will depend to some extent on the character of the soil. Where the soil is loose possibly disking after the grain crop is removed will be all that is necessary, though where the soil is stiff we believe that plowing to a depth of four or five inches and a frequent harrowing of the soil will bring it into ideal condition as a seed bed for clover and timothy. If this plan is carried out and the seeding is done about the middle of August and if there is sufficient moisture in the surface soil to germinate the seed quickly there is no question about the timothy going through the winter in good shape and we believe that the clover will stand a better chance of surviving the winter than it will of passing through hot July weather when it is seeded with a nurse crop.

This is a matter in which the experiment stations might perform a most important service or the farmers of their respective states, but, as before stated, we believe that it is entirely a resonable venture for farmers to take this up and try it out on their own account.

BELIEVES IN MAKING SILOS DEEPER.

It is not difficult to explain why silos are increasing so rapidly in popularity. When converted into ensilage a given acreage of corn furnishes such an enormous amount of good, palatable, nutritious food no comparison can be made between feeding the fodder in this condition and using it from the shock. An incident was related at the last meeting of the Iowa Aberdeen Angus Breeders' Association in which it was shown by one stockman that a herd of cattle that consumed $2,000 worth of hay during the winter of 1911 and 1912 were brought through the winter of 1912 and 1913 on ensilage made from ten acres of corn. Possibly every township in the corn belt could furnish similar cases and that being true we take it for granted that the number of silos erected this year will be even greater than has been the case any single year in the past. In this connection an Illinois subscriber has a word to say about making the silo deeper:

Of late years much publicity and advice have been given through the agricultural press, and those claiming authority, regarding the danger of constructing silos too large. This has probably resulted in many silo users going to the other extreme and building their silos much smaller than they should be. Many have already discovered their mistake to their sorrow.

My opinion is that where one silo is built too large 100 are built too small. By this I do not mean that they are necessarily too small in diameter, but that many silos built from twenty to twenty-six or twenty-eight feet high should properly have been from thirty to thirty-six or even forty feet high in order to have insured sufficient capacity.

The manufacturers of silos generally recognize more than anyone else the disadvantages of building silos out of proportion, and most of them have discontinued the manufacture of those greater than eighteen or twenty feet in diameter. It does not follow that a silo twenty feet in diameter is necessarily out of proportion, as these things should in every case be governed by the individual's particular needs. For instance, while a silo fourteen feet in diameter would be too large for many farmers who maintain only a limited amount of stock, one eighteen or twenty feet would not be excessive for one who has seventy-five or 100 head of cattle, but even then it is generally better to have two silos of medium size rather than one too large, as the different years bring different conditions.

In view of these facts the uninitiated in every case should build their silos to hold even more than sufficient for ordinary requirements, as it has been conclusively demonstrated that silage has as important a place in summer feeding as in winter feeding. By this it will be understood that instead of buying a silo 12x24 feet or 14x24, as the case might be, that a customer build one 12x30 or even higher. He will be well repaid in the end.

We believe that as the years go by farmers will more and more find it profitable to supplement their pastures during July and August and no supplementary food is likely to be at hand that will take the place of ensilage. This is due to the fact that it is relatively inexpensive and compared with soiling crops ensilage can be fed during the busy season of the year with much less expenditure of labor than is involved in any other system. We commend the suggestions of this subscriber in regard to making silos just a little bit deeper than has been the case in the past.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Those who have not time to weigh each cow's milk twice every day will find that by weighing three days in the month and multiplying this by ten will enable them to keep pretty close tab on the monthly work of each cow. Each cow's milk should be tested at least once every month either with a hand tester or at the creamery. If this is done it will not be necessary to keep the "boarder" till she reaches a ripe old age.

These stormy days are ideal times for the sorting and grading of seeds that will lay a firm foundation for this season's bountiful crop of field products. "A stitch in time," you know.

Should the apples with rotten specks on them accumulate in the cellar and storage pits faster than they can be eaten and used for cooking purposes, let the good housewife can them, or make apple butter of them.

Don't slop around in this cold mud and water with damp, clammy feet and expect to save anything by thus avoiding the expense of buying some good rubber boots. A man works better, anyway, with comfortably warm feet.

Avoid making the soil too rich in your germination box, as the seeds thus stimulated might show greater vitality than they would develop in the ordinary soil out in the fields where they will be planted a little later in the season.

While it is advisable to keep the heifer that will calve in good flesh, don't get overzealous and cram her with too much feed. Avoid the formation of fat and heat in her system, keeping her only in normal condition till she has dropped her calf.

If you have kept a pretty accurate record of each cow in the dairy herd this year, you now can take down your notebook and pencil, figure up the profits of each individual member, and then avoid the loss of keeping the unprofitable cows through another feeding season.

Sowing grains containing weed seeds of all kinds is a guaranteed method of cutting the grain yield short, seeding the whole farm to weeds, and sapping the vitality of the soil; while the use of the fanning mill insures a clean, pure grain crop at the minimum expense to the soil.

Plan now to run the harrow immediately after every bit of stirring you do this season. It will not only leave the ground ready and in fine condition for planting whenever desired, but by smoothing the surface soil it will greatly aid in the conservation of the moisture, thus fortifying it against the period of dry weather which invariably comes on at some time during the cropping season.

With the thought in mind of what heavy work the horse has ahead of him, give him the feed, care and attention that will put him in prime shape for the strenuous season.

Now that you many renters have moved, insist upon your landlord making a thorough inspection of the whole farm—buildings, fences and all. In justice to you and the man who has just vacated the premises, your landlord ought to know what condition everything is in when you assume charge of the farm. Such a course could do no harm, but it would insure against any trouble or misunderstanding arising from that source in the future.

If the county adviser proposition proves a winner, the county adviser must be a man who knows his business from the ground up. It strikes me that the advocates of this proposition are claiming more to come from one official than can possibly be drawn from the well of knowledge of one man.

I believe in one farmer selling seed to another, but I must admit the price received, above market value, is seldom enough to pay for the bother that the purchasing farmer must occasion the farmer making the sale.

It's a good idea to have an extra four-horse evener ready for use. I remember well enough a time when one broke on the self binder, on a hot, sultry summer morning, with a storm threatening and "old man" Furrows wanting to get done beforehand. There was a quick get-together of brace and bits, a saw and a piece of timber that answered the purpose for awhile.

Those who can have the choice of several roads to town are now using the telephone in an endeavor to locate the way offering the greater distance of dragged grades. If you want to bring travel alongside your farm, keep the road dragged.

The best way to take hold of some propositions is to take hold of what everyone believes is the wrong end. This is best exemplified in growing a crop everyone else is leaving alone.

Those empty fruit jars could be put into good use by filling them with meat for summer. Meat would keep fully as well in glass jars as in tin boxes and we would have the satisfaction of knowing just what kind of "canners" were used in filling them. We would also know more about the canner that did the filling.

One thorough dragging from the ditch to the center of the grade, after the frost has gone out in the spring and the surface has dried, does more good than one cut made later with an eight-horse grader. The dragging costs less than half the price of the grading.

My past experience with replowing in the spring land that was plowed the fall before leads me to believe it does not pay, particularly since the disk harrow has been so perfected that a man can very nearly do a job of plowing with that.

Regal

Choose An Underslung

The Car Suited for Country Roads

YOU will do most of your driving over country roads. The car you buy must be suitabe for these roads. It must be built low—not too low—and it must be safe.

The safest cars today are those built the Underslung way. Their constructions—the frame below the axle—brings the weight nearer the road. Whether you are driving over smooth roads, sandy roads or slippery roads, the car stays on the highway.

To be prepared for all kinds of roads you should choose an Underslung. Whether or not you purchase a Regal Underslung, your choice should be one of these "safest" cars. We know that in an impartial consider ation of the other cars and the biggest value, you will want to see and ride in a Regal Underslung.

This Regal Underslung touring car, shown below, has been designed to meet the demands of country travel. Primarily it is a safe car. With the weight hung low, it overcomes the danger of "turning turtle" and lessens skidding. Its road clearance is not only ample but also even. All the vital parts of the motor are protected with a flat dust pan. A Regal Model "T" can go anywhere another car can travel and where many cars cannot.

Besides a feeling of safety the owner of one of these Regal Underslungs finds additional satisfaction in the appearance of his car. The low rakish body gives it that "different" look which makes a man proud of the car he drives, The nickel-plated trimmings, electric lights and luxurious upholstering are further factors for beauty, comfort and satisfaction.

As one intending the purchase of a car for country travel, you owe it to yourself to learn more about this car and the other Regal Underslungs. See and talk with the nearest Regal dealer or, in case there is no Regal representative near you, write us at the factory.

Write today.

CURRENT EVENTS

KING GEORGE, of Greece, was assassinated while walking in the streets of Salonika on Tuesday of last week, the assassin being a Greek of low-mental type. The attack was made from behind and but one shot was needed which went direct to the heart of the ruler. The king, who had been taking personal command of his troops in the early part of the war with Turkey, had been in Salonika since last December. He was in his sixty-eighth year at the time of his death. Thousands of his countrymen have returned to their native land from the United States since the beginning of hostilities between Turkey and the Balkan provinces, though it is claimed that this patriotism was not because of love for the assassinated king, but for love of the country. Wherever Greeks have been assembled in the large cities during these troublous times cheers have gone up for the Crown Prince Constantine, but only curses and groans for the king.

ANOTHER plan of giving the farmer an agricultural college education will soon be put in operation by the extension department of the International Harvester Company. It is the intention to try out the new movement in the state of Illinois. The general plan will be modeled after the extension work that is now being carried on by agricultural colleges, though it is proposed to put on enough experts so that farmers of a given community may be dealt with directly. Automobiles will be used to carry the instructors from farm to farm and the first work to be taken up will deal almost wholly with the establishment of a larger alfalfa acreage throughout the state. Prof. P. G. Holden, formerly of the Iowa Agricultural College, will have charge of the extension instruction.

THE supreme court of the United States recently declared the plan of guaranteeing bank deposits constitutional and it is pointed out that this decision means trouble for a democratic congress. It seems that members from western states are favorable to the plan whereby the state guarantees deposits in state banks and some are willing to go farther by placing the same guarantee on deposits in national banks. If any such attempt is made it will be bitterly opposed by eastern representatives. It is expected that Mr. Bryan will champion this cause in the cabinet, as he has been the advocate of it and has been an important factor in getting it enacted into a law in Oklahoma and Kansas. Secretary of the Treasury McAdoo and his first assistant, John S. Williams, are said to be opposed to the guarantee plan, so that with a divided cabinet and a divided congress the enactment of this plan into a national statute can be brought about only under high pressure from the western states.

NOW comes the announcement that Ex-President Charles W. Eliot, of Harvard University, has been decided upon by President Wilson for ambassador to Great Britain as successor to the late Whitelaw Reid. Now retired from the active duties of educational affairs Ex-President Eliot after a service of forty years at Harvard University comes into new honors in his seventy-ninth year. For the last half a century he has been regarded as one of the leaders in national educational reforms. During the same time his advice has been frequently sought by the political leaders of both parties.

DEMOCRATIC control of the senate has resulted in the elevation of a number of prominent party senators to important committee chairmanships. Senator Simmons, of North Carolina, becomes chairman of the important finance committee, which is to handle all the tariff bills. Senator Tillman, of South Carolina, waged a strenuous personal fight to secure the chairmanship of the appropriation committee, the second most powerful of the senate, but was unsuccessful, Senator Martin, of Virginia, winning out. Senator Gore, of Oklahoma, a close personal friend of President Wilson and one of the most progressive democrats in the upper house, Senator Owen, of Oklahoma, and Senator Clarke, of Arkansas, chosen as president pro tem, will likewise be conspicuous, wielding much influence in the new senate to which will be submitted important problems, not only at the forthcoming special session, but at the regular session to convene next December. The access to power of the democrats marks the passing of the prestige of many of the reactionary republicans, prominent among them being Senator Penrose, of Pennsylvania, and Senator Crane, of Massachusetts.

A DEATH-DEALING wind storm wrought havoc in and around Omaha last Sunday evening, the first and unverified reports placing the number of lives lost at several hundred. Telegraphic communication was completely cut off the greater part of Monday, but the fragmentary reports which come through tell of great destruction wrought in South Omaha, parts of Council Bluffs and in several small towns immediately east. The storm followed the severe disaster which caused a loss of fifty lives or more in Alabama and other southern states and was accompanied by severe wind and snow storms throughout the greater part of the grain belt. It is impossible as yet to compute the loss in dollars and cents, but that it will reach an enormous total seems inevitable.

IMPRISONED English suffragists are being thwarted in their efforts to starve themselves to death. Twice daily they are fed through a stomach tube very much in the same manner as turkeys are force fed for fattening purposes. In some cases it requires as many as six attendants to creditably perform the task of imparting nourishment to those who propose to die for their great cause. One instance was reported last week where a suffragist sponged herself all over with hot water and remained uncovered all night in the hope of catching her death of cold. Others pretended to take food, but surreptitiously starved themselves so as to become exhausted and therefore die in prison, the hope being that this martyrdom would the more rapidly lead to the enfranchisement of the sex.

FORMER speaker of the national house of representatives, Joseph G. Cannon, arrived at his home at Danville, Ill., last week this being the first time in forty years when "Uncle" Joe has been among the home folks and out of public office at one and the same time. Arrangements had partially been made for a public welcome of the former speaker. When asked by wire if certain plans should be carried out, Mr. Cannon objected, and later said, "I don't object to garlands for the cadaver, but why decorate the sepulcher?" Commenting on his own physical condition Mr. Cannon said: "I have had a slight touch of indigestion, but just now I am feeling pretty fine again. As to my mental state let me tell you that when I get so old that I cannot take care of myself I have got a few good friends here in Danville who on occasion will come in and put their hands on my shoulder and say: 'Joe I wouldn't do that if I were you.'" Mr. Cannon refuted the statement that he had proposed to retire from politics claiming only that he had abandoned private ambition, proposing now to act as a private in the ranks.

ENCOURAGED by the rapid progress already made in a tariff revision bill close friends of President Wilson are now predicting that currency reform measures will be brought before the extra session of congress. Three months is the time allotted by the leaders for disposing of tariff matters before the extra session after which a currency bill will be presented as a party measure, one carefully worked out by congressional

A New Cross Country at $1875

Rambler Motor Cars

Big sales proved the right of the Cross Country to leadership in the medium priced field. This car is sold at $1875 with long stroke motor, fifteen per cent increase in power, and dual ignition.

It's a car of exceeding beauty, richly finished in light Brewster green. Rakish, low and balanced perfectly, it has grace, suggestion of speed, and lines that catch and hold the eye.

It's the easiest riding car we know. You may tour all day with pleasure and return without fatigue.

You will never know the meaning of Jeffery service until you get a Cross Country. The ten thousand mile guarantee goes with each car.

Started electrically by push button. Press another, you light the lamps.

Wheel base, 120 inches. Tread, 56 inches, option 60 inches. Wheels, 36 x 4 demountable. Tires, Goodyear or United States, 36 x 4. Equipment complete.

Have you seen the new Cross Country at $1875?

The Cross Country $1875

The Thomas B. Jeffery Company
Main Office and Works, Kenosha, Wisconsin

We will add 50% to the net earnings of your corn-field

We will add fifty per cent. to the marketable value of your corn crop and let you pay us out of the extra profits we make for you. Fifty per cent. of the food value of your corn as it stands in the field, is in the stalks, husks and leaves. Only about fifty per cent. is in the grain and cobs. We will make you cash in on your stalks, husks and leaves as well as on your ear corn. An

INDIANA SILO

will enable you to put that fifty per cent. into your cattle to take out again in milk and beef. Twenty-five thousand other farmers are doing this today. They are feeding four head of cattle off the same acreage they used to require to feed two head. They are making as much money from their live stock in winter as they make in spring. They are fattening their feeders right through the winter months and doing it at a profit. You can do the same and do it without the hard work and discomfort that attends your present method of feeding.

Send us your order for an Indiana Silo today and we will make one to your order and ship it when you want it. You will be able to erect it with no trouble and in a very short time. You will have the assurance that comes from dealing with the greatest silo manufacturers in the world. You will have our guarantee backed by the resources of our entire organization.

If you want to make more money out of one acre of corn land than you are now making out of two, investigate our silo and our easy selling plan that enables you to pay for the Indiana Silo out of its own earnings.

WRITE today for our catalogue and a free copy of the book "Silo Profits," which is the story of the Indiana Silo as written by scores of owners of Indiana Silos. And ask us for the name of our representative in your locality.

"You *buy* an Indiana Silo—but it *pays* for itself."

DAIRY

AN EASILY MADE MILK COOLER.

To the Editor of The Homestead:

A rather extensive acquaintance with small dairymen and dairy farmers owning from one to a dozen or fifteen cows has impressed me with the belief that a crying need of these small dairymen is a cheap, easily made, serviceable milk cooler. The large dairymen can afford to expend money freely in building milk houses and refrigeration plants for the quick cooling of milk after it is drawn, but my observation has been that dairy farmers are inadequately provided for cooling milk.

And it is these small dairymen in the country near cities and in the suburbs of cities who ship in the larger proportion of the milk consumed. Notwithstanding the great dairy companies in business in every large city, perhaps 75 per cent of the milk consumed in these cities is shipped in by farmers living all the way from the suburbs to 100 miles or more away, and a very large proportion of this milk comes in without having been cooled.

I was talking only last week with a big milk distributor in St. Louis who buys milk at wholesale from hundreds of farmers in this territory, and he made the startling statement that in summer 90 per cent of the milk he handled came in in hot cans, and in hot cars. Now, when you consider that some of this milk comes from towns 100 miles away and is in the cars in this heated condition perhaps three hours you will understand that it reaches destination in an unsanitary condition, and that milkmen who send in such milk are a detriment to the business. Yet many of these farmers are honorable men, and do not want to bring discredit upon the milk business, but they are not able to build expensive stone or concrete milk houses, some of them having perhaps only a half dozen cows.

For such dairymen a cheap and serviceable milk cooler could be made similar to one in use at a big hotel in St. Louis at which I deliver three ten-gallon cans of milk each morning. It is merely a long box about ten feet long, made of two-inch oak plank, high and wide enough for a closed ten-gallon can of milk to set inside with the box lid down. This box sets on a concrete floor between the store room and engine house of the hotel, in a cool, airy passageway where the sun never shines.

The box is put together in a substantial manner, with felt, rubber or some other kind of packing where the joinings occur, to keep the box from leaking. Thus it is as tight as if made of concrete. The box sets on heavy pine sills, and there is a faucet in the side, down near the bottom, to draw off some of the water when it gets too full. This waste water runs down the inclined concrete floor and through a small grated hole into the sewer. There is no pipe running water into the box, because it is not necessary. The ice put into the box melts and keeps the water replenished. A 100-pound block is put in every day. The ice is sawn into about three pieces, and one piece is put at one end of the box, another at the other end and the third about the middle.

The waiters, cooks and bakers are instructed to get milk out of the east end of the box, next to the dining room and kitchen door, and I am instructed to move the cans of milk I find in the box in the morning up to the east end and put the fresh cans in the west end, next to the street. Thus the oldest milk is used first, yet all of it is used while sweet and good.

The lid is a heavy oak one the same thickness as the sides and bottom of the box, and is fastened with a staple, hasp and padlock. This heavy lid is necessary, not only for keeping in the cold, but because when several cans one-third or one-half full are in the box, and the box is pretty full of water the cans stand rather high above the water. When the lid is raised suddenly they pop up like corks, and it requires a heavy lid to close, but when down and the lid is closed the tops of the partially emptied cans press squarely against the under side of the lid, and cannot turn over. When this box was first made, and before it was put into use it was hard oiled and given two good coats of paint, and will be a serviceable milk cooler for years because it is kept so cold with the ice that it never gets stagnant or ill smelling, for care is taken not to spill milk in the water, and the frequent stirring when fresh cans are put in and others taken out, or when ice is put in, or when a little of the water is drawn out all have a tendency to keep the water pure.

For a serviceable, easily constructed cooler this should be suitable for small dairymen who ship milk into cities. The box used at this hotel is about ten feet long, and holds six or seven

ten-gallon cans, but a farmer owning twenty-five or thirty cows could have a larger one if necessary, or perhaps two. Twenty cents' worth of ice a day (100 pounds, as it is usually sold) would keep say 100 gallons of milk sweet for thirty-six hours or longer, if necessary. Such a box should be placed under a shed on the north side of the kitchen or residence, never near the barn or cow stalls.

This cooler would be especially suited for country places, because no pipes would be necessary to run water into the box. The only thing necessary would be a faucet in the side or end near the bottom, to draw out a little of the water when the box began to get too full from the melting ice, with a pipe or tile drain to run the waste water away. A half dozen buckets of water poured into the cooler when first putting it into service, a block of ice sawn into two or three pieces (not more than three, to prevent its melting rapidly) and the box would be ready for service.

It is the law in some cities that milk shall not be sent in from farm dairies in summer showing a higher temperature than 50 degrees and this should be the law everywhere in the United States, and in time a law similar to this will be in effect generally, and with such a cooler as this a farmer fifty miles from the city could send in a half dozen ten-gallon cans of milk every morning in a pure, wholesome, sanitary condition. And it could be milk drawn the previous afternoon, anywhere from three to seven o'clock in winter and from three to eight o'clock in summer, for when kept in such a cooler afternoon milk would be as sweet at seven and eight o'clock next morning as milk drawn at three, four or five that morning from cows in a city dairy.

As a rule a dairy farmer with twenty-five or thirty cows must employ at least one or two hands as milkers, because the milking must be done twice a day, and somewhat hurriedly, but with a cooler like this a farmer and his sons could attend to their cows themselves. The milking could be done more leisurely, because as fast as a ten-gallon can was drawn and strained it could be placed in the cooler, when it would not matter whether it was sent to market within two hours or twelve hours. If necessary ten of the cows could be milked before breakfast, ten at eight o'clock and ten at ten o'clock, or in whatever other leisurely way suited the convenience of the dairyman and his family. In this way he would save more than the cost of the ice and the making of the cooler by getting along without a hired man.

In this cement age a more enduring box could be made of concrete, but every farmer and farm boy in his teens has some skill with tools, and could easily make a box as here described out of thick oak lumber, when they might not be equally skilled in making things out of concrete. Besides the oak box would be cheaper, and just as good as a concrete box for many years.

Cities are becoming more and more strict in their regulations and laws governing the handling of milk, and it will be wise for farmers to get in line early with the spirit of these laws, which are good laws, complying with them themselves and standing for their enforcement upon other less careless dairymen. J. Motes.

MANAGEMENT OF BREEDING BULLS.

To the Editor of The Homestead:

Breeding bulls cannot produce good results without plenty of nourishing foods and intelligent treatment. The poorly conditioned, worn-out bull cannot beget vigorous and healthy calves. To be at his best, he must have plenty of suitable food given him at the proper intervals. There must be plenty of bulky and succulent foods such as clover, alfalfa or mixed hay and silage or roots with the addition of just enough wholesome grain foods to keep him in a vigorous, gaining condition. He should be watered regularly at least twice a day.

A large and comfortable box stall gives the bull more freedom and is more safe and convenient for the attendant in feeding and handling the animal. Such a bull pen should be ventilated and well lighted, and arranged so that it may be darkened in the summer time to keep out the flies. He should be kept clean and provided with sufficient bedding material to prevent injury when getting up and down, as large animals, whose immense weight resting on their knees on concrete or plank, are very apt to bruise them and cause enlarged joints.

The care of the bull's feet is another important matter that must have careful attention. The constant standing in the stable has a tendency to cause them to turn up in front and prevent the animal from walking squarely on his feet. If the hoof gets out of shape it should be shaped properly by the use of a saw, pinchers and chisel.

Exercise is necessary to the health and general thrift of the breeding bull. The best way to exercise the bull is to have a small lot tightly fenced and allow him to run with one or two in-calf cows. In this way he will be more contented than if kept confined alone. If kept confined in a foul pen where he is constantly fretting he will have a spoiled disposition.

Always handle breeding bulls carefully and treat them kindly. If proper precautions are taken there is very little danger, yet it is always best to be on the safe side and handle them with a staff. The idea that a bull must be ill treated to know his place is a mistake. He is cunning and treacherous and if abused will await his chance to even up with you and when he does get his temper aroused he is a very dangerous animal to be around. It is many times best to put up with a few of his eccentricities than to undertake to club them out of him or you will have a merry time in bringing him to your way of thinking. Give him a little feed and pet him, even if you are playing the role of a Judas. In my fifteen years' experience handling dairy bulls we have had but one dangerous animal and this one we bought from a man who was afraid to handle him any longer. On the other hand we never allow our men to take a bull young or old out of his pen unless he uses a staff. It teaches him you are his master and he willingly takes up with the program.

As a rule it is best not to use a bull for service until he is fourteen or fifteen months old, and then he should be used carefully. Handled properly during the first two years he may be used many years. The folly of selling a good bull before his calves show their worth as individuals and breeders has been made plain to more than one man who has parted with a good sire. Never allow more than one service.

The young and growing bull should have more feed, care and attention than an older animal. He needs more exercise to build up healthy and vigorous vital and reproductive organs. This demands a strong and vigorous body and nervous system. No animal can develop into that symmetrical form that he should unless he has plenty of the right kinds of food and good care. Neither will he be able to beget calves that will be a credit to his ancestry if he is kept in a run-down, emaciated condition.

If we get good results we must keep our breeding bulls in good, thrifty condition. To the accomplishment of this end we must feed them liberally and give them clean and well-ventilated pens. Handle them quietly and not overtax their vitality by too much service. The well-kept bull and his calves are objects of admiration to successful stock farmers and dairymen. Do not forget when feeding the breeding bull that you are feeding half of the herd, that is from the standpoint of reproduction.

L. J. Meredith.

CURING LUMP JAW IN CALVES.

To the Editor of The Homestead:

There may be remedies for curing lump jaw in cattle. There is always a time when this lump is small and the observing attendant will see it before it gets large unless the calves are taken to a far-off pasture where they cannot be seen closely very often.

The time to cure this is while small, as in other cases "a stitch in time saves nine." Not long ago I observed a lump forming on a calf weighing 500 to 600 pounds. Immediate steps were taken for its removal. I figured the animal was practically worthless with it and worth $20 to $30 if I met with success. At any rate the experiment was worth the trial. Securing help the calf was placed on his side and his legs securely fastened. A slit was made and the lump peeled

$65,000,000
would be saved annually by the exclusive use of
DE LAVAL
CREAM SEPARATORS

It is estimated that a million cow owners in the United States are still skimming their milk by some wasteful "gravity" method.

At an average of four cows to the farm and an average cream loss of $10 per cow per year (it is more often from $15 to $25) all of which could be saved with the use of a De Laval Cream Separator, this alone represents an annual cream loss of $40,000,000.

Then there are, all told, perhaps a half million inferior and old and worn out machines in use whose owners could easily save $5. per cow per year by exchanging their "cream wasting" machines for De Lavals, and figuring on an average of six cows per farm, this represents another loss of $15,000,000 at least.

Then to this tremendous cream waste through the use of inferior separators must be added the excessive cost for repairs on cheap and inferior machines and the cost of replacing machines which should last from ten to twenty years but which are ready for the scrap heap in two or three years. There must also be taken into consideration the loss in lower prices received for cream and butter due to inferior quality of cream produced by poor separators, all of which must easily equal at least $10,000,000 more.

This makes a grand total of $65,000,000 which would be saved to the cow owners in this country by the exclusive use of De Laval Cream Separators.

At first sight these figures may seem startling but any experienced dairyman or creameryman will agree that the cream and other losses without a separator or with an inferior one will average a good deal higher than the above estimates and that these figures are really very conservative.

Any cow owner who is selling cream or making butter and who is not using any cream separator or an inferior machine is really paying for a De Laval in his cream losses and at the same time depriving himself of the benefit of its use.

De Laval Separators are not only superior to all others in skimming efficiency, but are at the same time cheapest in proportion to actual capacity, while they are so much better made that they last from two to ten times longer.

No cow owner can logically make the excuse that he cannot afford to buy a De Laval, because it will save its cost over "gravity" separation in six months and over any other separator in a year and is sold for either cash or on such liberal terms that it will actually pay for itself while it is being used.

It will surely be to your advantage to join the million and a half satisfied users of De Lavals. A little investigation will prove to you that the truth of the matter is you really cannot afford to sell cream or make butter **WITHOUT** the use of a De Laval Cream Separator.

The nearest De Laval agent will be glad to demonstrate this to your own satisfaction or you may write to us direct.

The new 72-page De Laval Dairy Hand Book, in which important dairy questions are ably discussed by the best authorities, is a book that every cow owner should have. Mailed free upon request if you mention this paper. New 1913 De Laval catalog also mailed upon request. Write to nearest office.

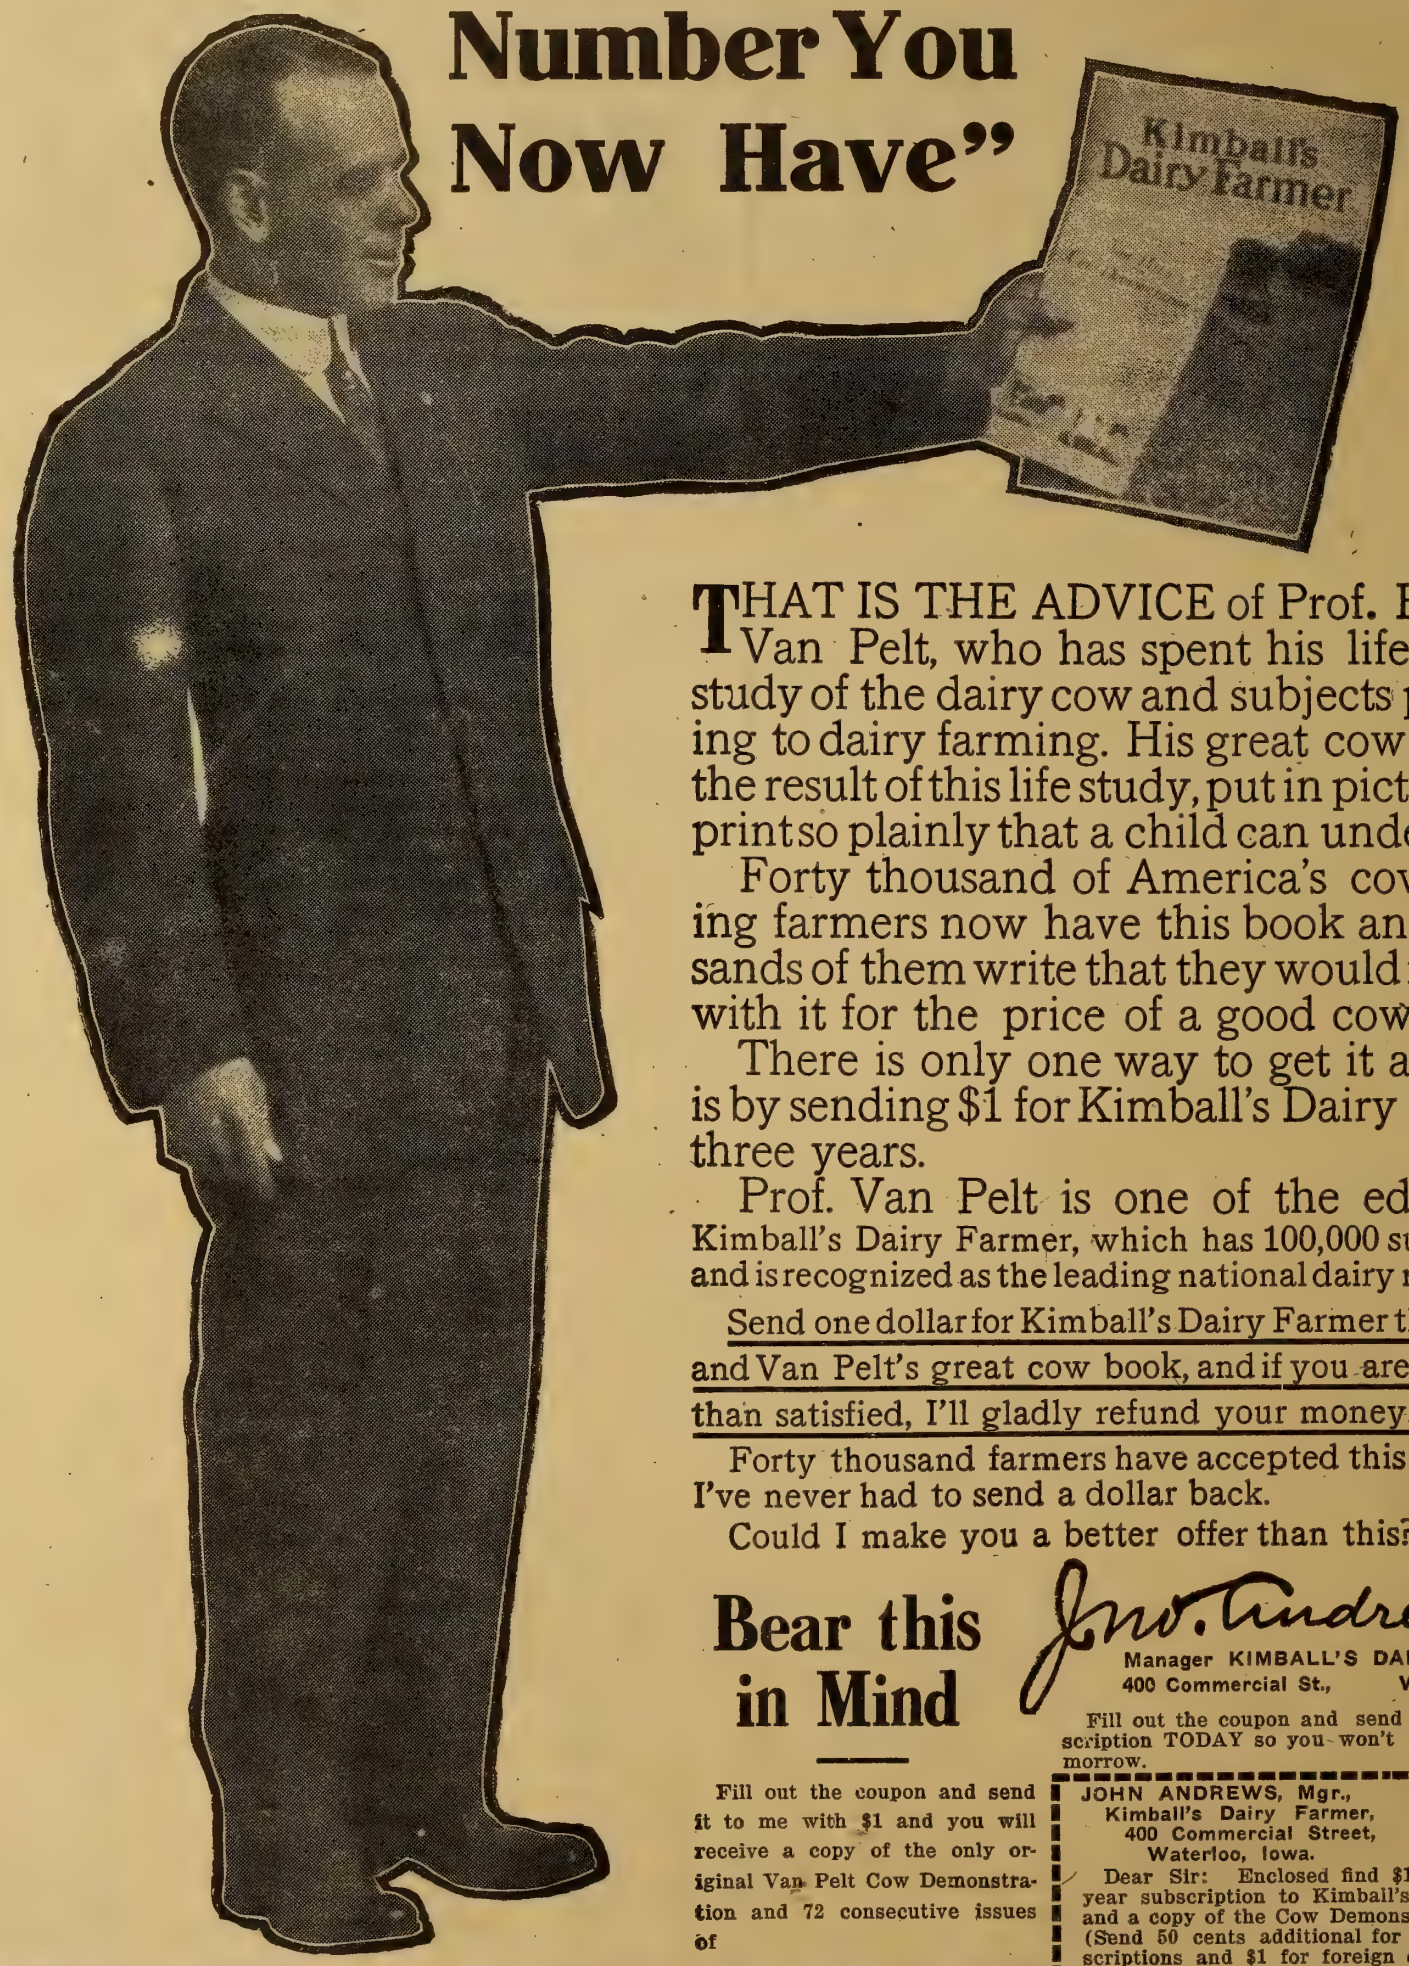
"Don't Feed and Milk More Cows But Double Your Income from the Number You Now Have"



THAT IS THE ADVICE of Prof. Hugh G. Van Pelt, who has spent his life in the study of the dairy cow and subjects pertaining to dairy farming. His great cow book is the result of this life study, put in picture and print so plainly that a child can understand.

Forty thousand of America's cow milking farmers now have this book and thousands of them write that they would not part with it for the price of a good cow.

There is only one way to get it and that is by sending $1 for Kimball's Dairy Farmer three years.

Prof. Van Pelt is one of the editors of Kimball's Dairy Farmer, which has 100,000 subscribers and is recognized as the leading national dairy magazine.

Send one dollar for Kimball's Dairy Farmer three years and Van Pelt's great cow book, and if you are not more than satisfied, I'll gladly refund your money.

Forty thousand farmers have accepted this offer and I've never had to send a dollar back.

Could I make you a better offer than this?

Bear this in Mind

Fill out the coupon and send it to me with $1 and you will receive a copy of the only original Van Pelt Cow Demonstration and 72 consecutive issues of

Kimball's Dairy Farmer

The Great National Dairy Magazine.

out. There was a very thin lining of membrane next to the jaw bone. However, the entire lump was removed. A small blood vein was severed in the operation. The blood squirted to a distance of ten or twelve feet. Calmly I threaded a needle with white thread and sowed directly through the severed blood vessel and stopped the flow of blood. I then washed out the wound made by removing the lump after which a liberal supply of iodoform was sprinkled all over the inside of the wound. Then the wound was neatly sewed up so as to leave no rough edges. Iodoform was sprinkled over the outside edges and the calf turned loose. Two months have elapsed. The wound healed nicely and no sign of the lumps appearing can yet be seen.

J. W.

CREAMERIES ARE PROFITABLE MANUFACTURING PLANTS.

Those communities with well-established creameries in operation realize that the creamery is an excellent manufacturing establishment. Many Iowa towns with around 1,000 inhabitants have creameries with annual outputs of from $75,000 to $100,000, which show up in heavy bank deposits, cash business at the stores, sustained fertility of the farm lands and the numerous advantages of a thrifty community.

According to the Iowa department of agriculture, which recently issued a public statement, 113,200 patrons of 504 Iowa creameries reporting to the Iowa State Dairy Department in 1912 received approximately $30,000,000 for their butter fat. This would make the annual income of each patron from his cream alone about $265. As a matter of fact many of the farmers selling cream to the creamery will make a good deal more than that, $100 per month and better not being at all unusual. With the great majority of them this dairying is only a side line. They keep a small herd of cows, averaging according to this report about seven cows to the patron. General farming is followed by most of these farmers.

The total value of the cream check represents only a part of the gross income from the cow, inasmuch as the skim milk, fed to the hogs, is an important item. The value of the manure in sustaining the fertility of the farm is another important consideration. But the cream check shows the ready money coming in which is such an important factor in the thrift of the community.

The report of the co-operative creamery at St. Ansgar, Mitchell county, for the year ending January 1, 1913, shows that this creamery paid out over $82,000 last year. St. Ansgar at the time of the last census had a population of 747 people. An $82,000 factory in a community of this size is an important industry and this report is considered by our state dairy department as fairly typical of successful co-operative creameries in Iowa. There are many such creameries in the state.

In fact the creamery industry in Iowa is the second manufacturing industry in the state in value of its products, being exceeded only by the meat-packing industry. The total value of the dairy products in 1912 is estimated by the Iowa Department of Agriculture to be $53,000,000. From 1904 to 1909 the value of the creamery products of Iowa increased 72 per cent, showing a marked development in the industry. In 1909 the state ranked third among the states of the Union in the value of dairy products.

WINDOWS IN THE DAIRY BARN.

To the Editor of The Homestead:

A man who had recently built a new barn rather proudly invited a man who had a well-known reputation as a producer of sanitary milk to visit it. "I want you to tell me if I have a sufficient number of windows in it," he said. The old dairyman immediately asked, "Is there room for any more windows?" "Yes, I presume so." "Well, then, I can tell you that you haven't got enough light."

It has been the writer's privilege to visit the farm of the apostle of light for dairy barns. Literally the side of his barn and the ends are of glass. He says: "Glass costs but little more than to cover the same space with wood and it has a great many advantages."

New dairy barns everywhere have a larger area of window surface than the older ones. The recommendations of the Federal Dairy Division are: "At least four square feet per cow." In older barns very frequently we see evidence that the wall has been cut away and window glass inserted. The questions may well be asked: "What does all this mean? Why so much glass? Is it more durable than wood? Or what are its advantages?" Some say, "We use the barn only during the winter. Then the days are short and we do the work by lantern light. We don't need windows, do we?"

In answer to the above often encountered questions let us say first of all, and as a basis for all that is to follow, that windows lead to cleanliness and next to cows and feed, cleanliness is most essential. It is the dark barn that is dirty invariably. Not long ago a visitor groped his way through the dark alley in a cow barn. Suddenly he bumped into something heavy and stiff. "Just my milking overalls," said the owner. In contrast there is another farm nearby where there is an abundance of light. Milkers there wear white suits and everything is clean and sanitary. The well-lighted barn is a clean barn.

Windows in a barn lead to better health in the herd. One of the most prominent of America's breeders of dairy cattle recognizes that fact in that he has a calf barn, the walls of which are more glass than wood. In contrast we may give one illustration of a dark cow stable. Twenty cows were sheltered in it for some time. Then the veterinarian came and tested for tuberculosis. Nineteen of the twenty were condemned. After that the owner got busy and cleaned up the barn. Above all he put in many windows where there had been none. It is a well-known fact that sunlight is the greatest destroyer of disease germs known. Be they germs that might affect the cows or that might enter the milk they cannot survive the direct rays of the sun.

Windows make the work in the dairy barn more satisfactory by providing plenty of natural light. Not all men do the work in the barn by lantern light. Neither does the man quoted above. Windows can be used for ventilating purposes. In fact, window ventilation is one of the most satisfactory means in use by which a one-story barn may be ventilated. The preferable method is to have windows of single sashes hinged at the bottom. On either side there is fastened a triangular guard which makes a protection against the wind blowing in at the side when the window is open. The air must enter above the window and not directly upon the cow. Out-

THE UNITED STATES CREAM SEPARATOR

Its 1913 Model Improvements make other Separators distinctly out of date

Mechanical Washing The "United States" is the only cream separator adapted for mechanical cleaning and can actually be washed with the U. S. Mechanical Washer in **one half the time** needed to clean other makes.

Non-rusting Sections The skimming device of the U. S. Separator is composed of nickel silver sections **guaranteed not to rust.** Besides nickel silver sections are stronger and **more durable** than tinned steel discs or other devices.

Lightest Running The 1913 model U. S. is one of the lightest running separators made and is operated with practically **one half the power** of older models.

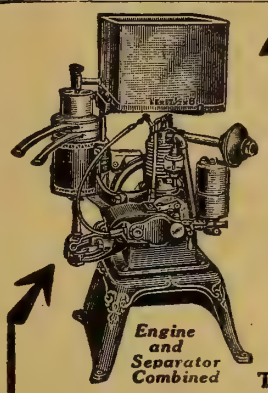
Closest Skimming Not only has its work in hundreds of thousands of dairies caused the U. S. to be **admitted** the closest skimming Separator manufactured but the U. S. has **proved** this fact by winning the **World's Record** for closest skimming.

Price The 1913 model United States Separator *with* its superior advantages **costs no more** than other makes without them.

FREE DEMONSTRATION Ask your local U. S. agent for a free demonstration of the 1913 model at your home. Our catalogue is free for the asking. Write NOW for it.

VERMONT FARM MACHINE CO.

Bellows Falls, Vt. 15 Distributing Warehouses from Coast to Coast Chicago, Ill.



You've Heard a Good Deal

about the "AUTOMATIC" cream separator. Must have, if you read the farm journals. And if you are using a separator on your farm you'll say it's a corking good idea—just what is needed to get rid of the drudgery, expense and waste of cranking by hand. Nine out of ten dairymen want the "AUTOMATIC" when they see it.

If You're Milking 10 Cows Find Out for Yourself how efficient it is. How it differs from the makeshift of hitching a gear driven separator to a gasoline engine. Don't judge the efficiency of its self-contained motor by your experience with the ordinary gasoline engine. They're entirely different.

THE "AUTOMATIC" CREAM SEPARATOR MAGNETO EQUIPPED

is much more dependable; the engine is specially designed for separator use; protected against balking by a self-regulating gasoline feed. Can't kick. Don't take our word for it. Write any number of thousands of successful users, some of them in your own neighborhood, and send for "AUTOMATIC" catalog. It is thoroughly scientific, deals with gasoline power and separator facts every dairyman should know.

Write NOW, giving us the name of your dealer and ask for catalog 7

DES MOINES SILO

The Des Moines Silo is always a year ahead of any other silo on the market. Our last year's catalog told of all the features that are being offered as new this season, while our this year's catalog tells of new features that have been developed in our factory and on our farms during the past season. These new features can be had only on the Des Moines. This year the development is the base anchor which completes the triple anchor system which, with the inside hoops, holds the Des Moines as solid as a rock under all conditions.

Hundreds of these Des Moines Silos were shipped to all parts of the United States last year. More orders were received than could be filled in time for early fall filling, so it is to your advantage to place your orders early. We have on hand more than three million and a half feet of Silo lumber which is thoroughly seasoned and already creosoted.

Write for the story of the Des Moines Silo. **Book sent free.**

lets located centrally remove the foul air. This window method of ventilation is cheap, simple and effective. Windows add much to the comfort of the cows and to the efficiency of the dairy. The rule, "At least four square feet per cow," may well be kept in mind and be applied to all barns, either in use or contemplated. It will mean more healthy cows, clean and purer milk and dollars in efficiency.

H. E. McCartney.

"Good" Cows Versus the Best.

PRESIDENT HYDE, of Bowdoin College, once said, "The good is the enemy of the best." At first blush, that seems to be a rather startling proposition, a contradictory statement, but looking at it from a certain standpoint, it would seem to be entirely true. We are quite apt to say, "That is good enough," and not strive for that which is better or best, and when we do that then I think the statement of President Hyde is absolutely true. We oftentimes hear farmers say, "That is good enough," when a little effort or thought or interest would produce something entirely better.

The adjective "good"—we used to compare the adjective by saying, "Good, better, best," and I want to talk briefly about better cows, or the best cows. I do not mean necessarily pure bred, but the best producing cows, in other words, profitable cows.

I would say that the benefits which come from good breeding are so apparent, and the rules that govern it are so simple, that the wayfaring man, though a farmer, need not fall down in the way.

I wish to speak of two ways in which good cows may be secured. The first is by going out and finding herds of cows whose owners have carried on a system of testing for some years and can tell just what each one of their cows has given in pounds of milk and in butter fat. In this way you can secure good cows if you are willing to pay the price.

However, you cannot expect such persons to sell their tested cows, that they know are capable of producing 400 pounds of butter fat per year, for the price of an ordinary cow. Again, you can buy cows from neighboring dairymen and occasionally you will get a good one. The appearance of cows is very deceptive; the only way to tell what a cow is worth is to use the scales and Babcock test.

Two years ago we had two grade Guernsey cows in our herd. Several men who visited our place were asked to look these cows over and tell which was the better of the two. This was done several times, and invariably the men would select No. 13, the poorer animal of the two, and call her the best individual. We bought her for an ordinary price and sold her for beef, because no matter how well she was taken care of we could not get good results from her. The other grade, No. 16, is a cow thirteen or fourteen years old and has been capable of giving 10,000 pounds or more a year, and upwards of 400 pounds of butter fat, and yet intelligent dairymen looking over those individuals would say that No. 13 was the better of the two. Again, I wish to say, outward appearances are very deceptive.

The second way of securing good cows of which I wish to speak, and which I believe is much the better, and is open to all, is to take whatever cows you have in your herd at the present time, I do not care what they are, scrubs or anything you have, then decide as to what dairy breed you wish to develop on your farm. In helping to decide wisely, I think it would pay one to spend a day or two in investigating what is being done by a good Jersey herd of cows. Then go and visit good herds of Guernsey cows and spend a day or two in investigations, ask questions and learn all possible, and so on with other dairy breeds in the same way. After you have spent a few days, a little time and money, it seems to me an intelligent farmer ought to be able to decide which of the dairy breeds he would like to develop on his farm.

Having decided what breed you want to develop, the next question is the sire to head the herd, and right here you want to use the best judgment possible. Get a good individual, look carefully to the qualities of the dam of the sire. She should be a good cow, with a good udder, a large producer. Get just as long a line of good producers on both sides of this sire you propose to buy as is possible, the longer the better.

One word in regard to what a cow should do. My opinion is we farmers ought not to set our standard at less than 400 pounds of butter fat for a cow as an annual production. I do not say we ought to stop there and consider that as altogether satisfactory. I think it is our duty to so manage our business that we may get that much from the individuals in our herds. We should try to get such large producers that butter may be retailed at thirty cents and still leave a profit to the producer. Butter at forty cents is in the class of luxuries that common people cannot afford to use, so we ought to develop cows that will produce 400 pounds of butter fat, which, with the skim milk and the calf she will bring, and the fertilizer to put back on the ground, will make the cow a profitable animal, even at the high prices of feed at the present time.—[G. F. Comings in Wis. F. Ins. Annual.

THE REPUTATION OF THE DAIRY.

To the Editor of The Homestead:

A sanitary dairy near a large city was visited a short time ago. A remark by one of the men employed on the farm impressed the writer very forcibly. The man said, "Last month our dairy scored more than 2 per cent higher than any other dairy supplying the city. Since the results were published we have had a great many visitors." A consideration of the matter seems to show that people give more attention and thought to their milk supply than to any other article of food. This is necessary in part owing to the perishable nature of milk. The desire to have clean, healthful foods accounts for the remainder of the public interest.

The dairy mentioned has stood in high favor since its establishment six years ago. The owner is a man of sufficient means to own and operate the dairy, but it is his one business. He had not had previous experience in dairying, but had learned some of the details while an agricultural student in school and was able to see the universal public demand for pure milk.

Barn and milk house were constructed new and of strictly sanitary design. Healthy cows were purchased and certified milk was offered on the retail market. No milk was sent out that was not absolutely up to requirements. The board of health made favorable report upon the dairy and upon the milk. In a very short time the demand exceeded the supply. Then the trade was restricted to the section of town nearest the farm which simplified delivery and collecting. Even after that there has never been a day that people desiring to purchase certified milk have not been turned away.

Near that same city is another sanitary dairy. The milk from it, however, is sold wholesale to a distributing company in the city. The name of that dairy is so well known and the quality of milk and cream so absolutely sure to be up to standard that the name of the farm on the caps for the milk bottles is sufficient to sell the milk several cents per quart above that received for the products of other dairies. In both those dairies high-class milk and cream have been produced and never anything of an inferior grade substituted. When there has been no certified milk to supply the entire demand, orders have been filled only by stating that the milk used was not certified and by accepting a much lower price. The reputation of those two dairies enables the products from them to sell from 50 to 100 per cent higher on the retail market than the milk from any other dairies. So it is everywhere. There is not a city in the middle West where the demand for clean, sanitary milk does not exceed the supply. Always the price is high.

The same is equally true as regards the sale of breeding stock. There is not to be found anywhere a dairy herd

Just a sample one of the 200 to be sold at

PATENTS that PAY. $561,530 made by clients. Patent Book—"What & How to Invent—Proof of Fortunes in Patents" FREE. 112-p. Guide free. E. E. VROOMAN, Patent Atty., 812 F St., Washington, D. C

that is overstocked with good cows. If the herd produces well, the fact is widely known and there comes an insistent demand for sale. The chief difficulty comes in putting the price up high enough to retain the best cows in the herd. It is usually a matter of pride with small dairymen to have a bull from a herd that is widely known. At the head of one herd visited recently was a bull from one of the most famous herds in the country. The herdman could tell nothing about the bull's ancestry as to whether it showed high production or not. He was highly satisfied to know that the bull came from that particular herd. The reputation of the herd from whence he came was sufficient recommendation.

How is a man to secure a reputation for his dairy? Is it legitimate for him to seek a reputation? The answer to the first is simple enough. First, a man must produce what the market wants. If clean, wholesome milk is desired, then arrangements as to buildings and cows must be made such as will produce it. Then the public must be made aware of the fact or else the reputation will never come no matter how much the dairy is worthy of it. Judicious advertising is necessary. Neat, bright wagons with appropriate lettering and drawn by a pair of nice horses form a cheap and attractive advertisement. Advantage must be taken of every opportunity to get a write-up in the local paper. In the case first mentioned in this article it was the publication of the results of the inspector's score that was leading visitors to the farm. Bill boards may sometimes be used effectively. In answer to the second question we may well say that it certainly is legitimate to seek reputation. A reputation for satisfactory service and a high-class product is necessary to maintain a profitable business. It is just as legitimate for a dairyman to seek a reputation for what he has, as it is for a merchant to make his place popular by advertising or otherwise. The reputation of the dairy is really the balance wheel of business and profit.

H. E. McCartney.

AGE TO BREED DAIRY HEIFERS.

This is a matter that is presented many times during the year by our subscribers as they ask about the age at which their dairy heifers should be bred, having in mind the development of dairy qualities to the highest degree. In answering this inquiry we cannot do better than quote from Prof. C. H. Eckles' excellent work, "Dairy Cattle and Milk Production," as follows:

The age at which cows should come into milk depends somewhat on the breed and the maturity of the animal. The larger breeds, as the Holstein and Brown Swiss, as a rule should not calve much before thirty months. The more rapidly developing Jersey is, as a rule, sufficiently mature at two years. Other breeds rank in between these extremes. The proper age to breed depends somewhat on the size and development of the heifer. Heavy feeding of grain results in an animal large for its age and early sexual maturity.

Some breeders prefer to have the first calf dropped at rather a young age, claiming in this way to fix a habit of milk production in the young animal, and at the same time securing financial returns as early as possible. A common practice among these breeders is to allow about eighteen or twenty months between the first and second calves. In this way a long-milking period is developed and the cow has time to grow before the birth of the second calf.

It is severe strain on the heifer to develop the fetus. Our investigations show that during the last three months of pregnancy a heifer, even when fed a liberal ration, does not add to her own body. The increase in weight shown is all found to be in the fetus. After the calf is born the heifer weighs, as a rule, no more than she did three months previously.

Breeding too young undoubtedly results in small cows. It is impossible for a young cow to digest and assimilate a sufficient amount of feed to produce milk and growth at the same time. The production of milk, on account of its relation to reproduction, is a dominant function, and will not be materially checked to allow growth to continue. For this reason it can hardly be expected that a heifer calving young and immature in size will develop into a cow of normal size if she calves regularly each year afterwards.

The cow that has calved early, as a rule, shows a more pronounced feminine characteristic, and is finer in the bone, than the one that has calved at a later age.

To the advice given by Professor Eckles we would also add a word about the dual-purpose cattle that are so common on the farms of the corn belt. These greatly outnumber the dairy breeds and in most cases they are grade Short-horns. Heifers of this breed should if anything be bred a little later than either the Holstein or Brown Swiss heifer. If they have their first calf at thirty-two or thirty-four months or even three years of age this will be plenty early enough and while it is a little more expensive to carry cattle that long than if they came into milk earlier, yet in the end the practice is a justifiable one. No matter what breed one handles the aim should be to keep up the scale and this can only be done in the case of dual-purpose cattle if they are allowed to get plenty of size before dropping their first calves.

COMMON-SENSE TREATMENT OF DAIRY COWS.

(Continued from page 3.)

intensity in the dairy business. Let us urge the minimization of dairy wastes and the profitable utilization of dairy by-products. Briefly let us all join together in promoting the abolition of the unprofitable cow, of the unbalanced ration and the inefficient method of management from our dairy herds. Dairy cows are intended to be profitable and economical producers. It is our duty to maintain the animals under conditions that will promote the attainment of such results.

A milk firm in Boston estimated the cost of delivering a quart of milk to the consumer at 4.4 cents, to which it adds .37 cents for shrinkage, while the average price paid to the producer was 3.9 cents per quart; that is to say it cost more to deliver the milk than to produce it.

Find Out *The Cause and Effect of*
Deep Tilling!

Spalding users—on a thousand farms—are reporting their increased crops and enhanced land values. Below are a few such reports—many more are waiting for your inspection in our *Experience File.* All these men read about the **Spalding Deep Tilling Machine** a year or so ago and realized *then and there* that they didn't have any time to waste, so they got busy and *now* they can report as they do.

Elsie, Neb., Mar. 20, 1912.
Expect to keep my two Spaldings at work continually this spring and to be able to report later the exact results. My experience so far as it has gone has been very encouraging. Their work speaks for itself. Whenever deep plowing is needed, they solve the problem with a minimum of power needed, and no other machine that I have seen will mix in the same way the soil from top to bottom of furrow. A most important point in many soils. ROBT. TAYLOR

Fort Atkinson, Wis., Oct. 28, 1912.
I have your letter of the 16th inst., relative to my experience with one of your machines which has been in use on my farm for nearly two years.
I can say frankly, that the plowing it does is the only plowing that ever suited me in full. The way "it goes to the bottom of things;" the results shown in the growing crops for two seasons (one of drought and the other of abundant moisture) convinced me that I have found another farm that the machine has disclosed to me.
My idea that one thorough breaking up of the soil twelve inches deep, is enough for at least a term of years. Both logic and experience justify the use of this splendid tool.
W. D. HOARD.

Clarinda, Ia., Jan. 20, 1913.
Replying to yours of Jan. 2nd, in regard to the results of the use of the Spalding Deep Tilling Machine, will say that the field in which we used this machine was freer from weeds, worked easier and the soil was in a better physical condition than fields plowed in the ordinary way.
MARCO B. WALKER.

Thomas, Ill., Dec. 16, 1912.
My corn was one-third better where I used the Spalding Deep Tilling Machine.
THOS. A. DRAYTON.

Monmouth, Ill., Oct. 29, 1912.
The deep tilling caused a gain of 17 bushels per acre.
HARRY F. FAIR.

HORTICULTURE

THE FORMATION OF "FROST POCKETS."

To the Editor of The Homestead:

The farmer of the upper Mississippi valley who is planning to put in a young orchard this spring should use judgment in the selection of its location, so as to avoid the danger of early freezing of the buds.

The best location for an orchard, where it will be safest from early spring frost and freezes, is somewhat difficult to determine, because weather conditions differ from spring to spring. Conditions might be such occasionally that the best place for an orchard would be on the north side of a gradually sloping hill, in order that the natural coolness of the air and north wind on that side of the hill might keep the fruit trees from blooming out until all danger from frost was over, but undoubtedly the location in which an orchard will be safest during average spring conditions is on the south slope of a long hill, with the summit of the hill covered with forest trees.

But such an orchard should not be in a depression, with hills all around it. Neither should there be a thick forest of tall trees on the southeast, south and southwest sides of the orchard. Rather should the country be open on these sides, so there may be a free run-off for the cold, damp air on early spring nights. It is especially necessary that on clear, cold, somewhat damp nights there should be some breeze stirring in an orchard, so as to keep frost from forming, otherwise the orchard is bottled up in a kind of pocket, which keeps the air from circulating except in an up and down direction, for when the earth is cooling there must be some circulation in the air, even though not enough to be perceptible. Warm air is rising, cool air is falling, but the stirring may not be sufficient to prevent the condensation of the moisture into dew and the resultant frost.

With a free, wide run-off for the air on the south side of an orchard, a low valley, with hills on the north and northwest side, is perhaps as good a location, taking one spring with another, as can be selected, while if there is no run-off for air through a valley or wide gap between hills on the south side it is about as bad a place as can be chosen. Trees naturally bloom earlier in valleys than on high hills or the north side of hills, and if conditions are right on the south side the blooms and buds have a better chance to escape freezing than anywhere else.

You will notice along creeks, small rivers and other streams with low bottom land on both sides, that trees, vines and shrubbery put out young leaves earlier than trees on uplands, and these tender buds and leaves in the swamps are seldom frost bitten, but this is because there is generally some slight current of air blowing up and down these streams, which keeps the air a little warmer than if it were still, and also keeps dew and frost from forming. Were it not for this free circulation of air up and down these streams the tender leaves and blooms would very often be killed back, just as they would in upland regions where thick timber and hills surround a depression, because a "frost pocket" would be formed containing cold, still, damp air.

These principles are of great importance to the man who is planning to set out a young orchard of valuable fruit trees this spring, but it is also important to the man who already has an orchard of good bearing trees, for if it is in a valley with no southern outlet through which the air can flow off freely he should proceed at once to improve conditions on this side of his orchard. If he has been unfortunate in having his fruit buds and blooms frozen often during different springs he may be pretty sure it has been because there is no southern outlet for the air to circulate through his orchard.

If a timber tract covered with tall trees lies to the south of his orchard, a tract belonging to a neighbor, it would pay him to buy the tract, even at a stiff price, cut down the trees and put the new ground in some annual crop. This is vitally important in the case of early blooming fruit trees.

I. Motes.

A PEACH ORCHARD FROM SEED.

To the Editor of The Homestead:

One of the best and most enduring peach orchards in the state of Texas was grown from seed, and the fruit is not the little seedling knots usually found in fence corners. The seeds were planted where they were wanted and later the young trees were budded to the desired variety. In some cases these seedling trees proved to be valuable acquisitions and were not budded. Most fruit growers will say that this method entails more labor and expense than to follow the regular method of buying trees from the nursery and setting in the usual way; and this is a fact so far as the expense is concerned. But this orchard is yet bearing profitable crops of peaches where nursery trees set at the same time have outlived their years of usefulness.

What has been done in Texas can be done elsewhere, and it is just such methods that discover new and desirable varieties. The seed were selected from good fruit, in some instances from seedling trees, and planted in rows twenty feet apart and five or six feet apart in the row, without regard to how the cross rows would run. Where all the seed came up about a third of them were budded to some standard variety, so that the budded trees would stand at as uniform a distance apart as was possible. All through the orchard the young trees were budded every fifteen or twenty feet and the intervening trees were allowed to grow as they stood. Thus the trees stood in the row from five to ten feet apart, which would be too close after the trees had reached the age of three years. Most all the seedlings had borne some fruit by that time, and if not of good quality, the trees were marked for the ax; thus leaving room for the budded tree adjacent. More than 10 per cent of these seedlings proved to be of better quality and vigor than the budded trees along with them, and at least a third bore marketable fruit. In every instance where the fruit was as good on the seedling as on the budded tree near it, the budded tree was cut out. Thus by the fourth year, when a fair crop was to be expected, the tree stood at an average distance of eighteen feet apart, almost equally divided between the budded and the seedling trees.

This requires a little more labor than would have taken to set the trees of uniform distance at once, but gives an opportunity to select the best. If it had been desired merely to bud the trees as they stood in the row without culling them out after a trial, two seeds could have been planted in each place, and if both came up one could have been destroyed and the other budded. This would have given straight rows both ways. At least half a dozen of these seedling trees bore fruit of such marked superiority that scions were cut from them for budding trees in the neighborhood several years later.

By this method the trees will be only one year later coming into bearing, the orchard will be longer lived, and the fruit grower will have the opportunity of discovering a new and valuable variety.

Subscriber.

DESTROYING POTATO SCAB.

A Nebraska subscriber, Mr. Lewis Gardner, asks for information pertaining to the treatment of potatoes that are infected with scab. While there are a number of chemical compounds that may be used for this purpose we favor the plan of using formalin. This is an inexpensive product and when mixed with water it is not poisonous. We do not mean to intimate by this that care is not needed in handling a mixture of formalin and water, but it is not nearly so dan-

PEDIGREED Seed Corn

Show Corn is Good Corn Notwithstanding.

By I. E. Proudfit, Polk County, Iowa.

A RECENT issue of your paper contained an article entitled, "Corn Shows Out Of Date," by C. R. Moore, in which the writer claims that show corn is a very undesirable corn to grow on account of poor-yielding qualities. In the same issue Mr. Redfern very ably explained the methods practiced by breeders to obtain high yields and show qualities combined and therefore I will not add anything on that point except to say that the highest yield in the acre-yield contest held under the auspices of the Iowa Corn Growers' Association in 1912, was won by a boy who used show corn for seed that had been awarded trophies and premiums the winter before.

In judging corn the size and shape of the ear have a great deal to do with the yielding ability. It is not judged from the standpoint of mere beauty, but rather utility from the market standpoint. A large per cent of our corn crop reaches the market where, at the large markets, it is graded according to our standards of judging and the top price is paid for that which scores the highest in protein or feeding value? Therefore, is not the market a good criterion? Feeding value is something the farmer cannot afford to overlook in the feeding of live stock.

This brings to my mind an incident which will bear out this point. Three years ago a prominent stock breeder knowing the difference in favor of pure-bred versus scrub stock decided there must be something to the theory of pure-bred corn. Wishing to compare it with his common corn he purchased enough of my seed for one field. At husking time he cribbed in a double crib, pure-bred corn on one side and scrub corn on the other. He was delighted with his investment, but told me how he was further convinced of its higher feeding value. The rats showed such a preference for the pure-bred corn that he decided to make a comparison and found that the kernels in the pure bred contained the greater amount of oil or protein. Nearly all agricultural papers and college bulletins explain the higher feeding value, but taking this as a lesson it seems that we should at least be as wise as the rat and prefer the best.

As to sweepstake ribbons being tied to samples unfit for seed, I am willing to admit that occasionally this might have occurred at institutes where nothing better was shown, but at old-established institutes I am of the opinion that this would not happen. Evidently the exhibitors in question had had no opportunity to acquire the knowledge of selecting seed and show corn which is only proof of the greater need of corn shows. Prize institute samples are usually sent to our state show in competition with the experienced breeder and here the owners find out where they are lacking and go home filled with the knowledge and a desire to improve their corn.

If no standard of utility were maintained how could our inexperienced farmers know whether or not they were progressing in their efforts to improve their corn or not? I had been selecting seed corn with the object of growing larger ears and increasing my yield, selecting only from outside appearances, but after attending my first corn show I found my views entirely wrong and that I knew practically nothing about selecting seed for utility or high yield. By purchasing seed the next spring from a neighbor who had won grand champion on ten ears selected from this same field, I increased my yield twenty bushels per acre and have been breeding this same corn to higher yielding ability by proper selection of seed. I am growing first instead of second quality as formerly.

In speaking of poor returns from show corn, is it reasonable that any sensible farmer would want to continue growing that kind of corn on high-priced land? The description furnished by this writer leads me to believe that if his seed was good he did not give it a square deal. Cornstalks of ordinary breeding do not break easily if sufficient plant food has been provided. Corn strong in vitality will produce, I care not what the breeding, if soil and weather conditions are favorable.

As this subscriber is very bitter over one failure where hundreds have succeeded, let us get at the bottom of the matter. Where did he obtain his show corn? What kind of soil did he plant it on and has he ever attended state shows? If he desires information some of the corn breeders could probably tell him why he failed, but if he is only a knocker, well—reconstruction is a difficult undertaking. I do not think it remains for seed corn improvers to weed out low-yielding ears, as that is something they have been doing for a number of years. If this gentleman had been attending our state shows and keeping in touch with our best breeders he would not have made this statement. As to sound corn, I will leave it to our local grain buyers whether it is the grower of pure-bred or scrub corn who furnishes them sound corn. I am in position to state for this locality, that practically all the sound or matured corn taken in at our station has a show record behind it. Nearly all the pure-bred corn raised in this locality, and there is a large per cent of it, is of the same strain from seed brought here about nine years ago by A. L. Plummer.

Speaking of luck in connection with producing a grand champion, probably it is lucky to be born with a desire to do a thing as well or better than your neighbor. Luck does not find champion corn, we only reap what we have sown. It took five years' thought and labor and a strong faith in nature's laws to produce this year's grand champion ten ears. As to the ten prettiest ears winning, should not a sample uniform in type and kernel be pleasing to the eye?

If corn shows were held for no other purpose than to create sociability and co-operation among farmers they would be fulfilling a great need and would keep us from narrow ruts. Since the one's hands in the liquid. Sometimes barrels are used, placing the potatoes in these first and afterwards pouring in the liquid until the vessel is completely filled. At the end of two hours simply pour off the liquid, spread the potatoes out so that they will dry quickly after which they may be cut at any time. If the latter plan is followed we suggest that the sacks also be given a thorough soaking because scab spores may again infest the seed after the treatment.

One Thousand Dollars Best Ten Ears of Corn Grown by Iowa Farmers

The Home Mutual Hail Association, of Cherokee, Iowa, have contributed, $1,000 to be given in extra premiums to the prize-winners at the Iowa Corn and Small Grain Growers' Association meeting to be held in Ames, Iowa, in December. Members of the Home Mutual Hail Association or those who become members prior to July 15th, will be entitled to double premiums.

These premiums will be in addition to the regular prizes offered by the Iowa Corn and Small Grain Growers' Association. The state is divided into four zones, as follows: Northern, North-Central, South-Central, and Southern. The first premium offered by the Home Mutual Hail Association in any one of the zones to a non-member of the association will be $50.00 and to a member $100. All the following premiums will also be doubled in the event of the winner being a member of the association. Second premium, $25.00; third premium, $15.00; fourth premium, $10.00, and five premiums of $5.00 each. Every farmer who becomes a member of the Home Mutual Hail Association not later than July 15th of this year will be entitled to the double premiums, if a winner.

This is rather an unusual offer for a firm who will not profit by the increased yield of corn in Iowa more than a great many others, and the company deserves great credit for the particular lines it takes to promote its business. However, when the character of the men composing the company is looked into the basis for such action is readily discovered.

The officials of the company are well-known and highly respected business men. James F. Weart, of the firm of Weart & Lysaght, who own and control a large number of lumber yards and grain elevators in northwestern Iowa, is president. R. H. Gray, of the Larrabee Savings Bank, is vice-president. Ralph Hinman, cashier of the First National Bank, of Primghar, is one of the directors. W. A. Sanford, the treasurer, has for many years been connected as vice-president, with the First National Bank, of Cherokee, one of the oldest banks in northwestern Iowa. Louis A. Wiweke, the secretary, is an insurance man of push and energy who, by persistence, has made a remarkable career in the insurance business.

The Home Mutual Hail Association has a very enviable reputation, and a large business in Iowa. They are trustworthy in every respect, and are entitled to the confidence of the farmers of this great state. They desire that prospective customers make the most careful inquiry into the honesty of their methods, feeling assured that after doing so they will be more than satisfied, and the merits of the association will more strongly appeal to them with the result that they will feel it a pleasure to become one of the members of the association. With the long years of integrity and honest dealing behind them they could hardly afford to prejudice the few remaining ones by conducting this business in any way that would bring a taint on the records they have made and they are earnestly striving in every way to merit the full confidence of their customers.

As stated above, the contest is open to every farmer in Iowa, the corn to be sent by express or parcel post prepaid during the week commencing December 22, 1913, to the Iowa Corn and Small Grain Growers' Association, Ames, Iowa, where the corn will be judged and the premiums awarded according to the rules of its membership.

Send to this association for further information before shipping corn, and for entry blank, premium list and shipping tag. For more information regarding the Home Mutual Hail Association, sample of its policy, etc., write direct to that company at Cherokee, Iowa.—Adv.

Have You a Garden?

world is full of knockers in every line of progression we need some stimulating to offset their pessimistic views. If we eliminate our corn shows why not our agricultural colleges? When we farmers think there is no more to be learned about corn or anything pertaining to farming our education has not begun.

TOMATOES AS A COMMERCIAL CROP.

The tomato is adapted to a very wide range of purposes in the household and to a great extent takes the place of fruit when the latter is scarce. For this reason it is one of the most widely grown of all vegetables. It is also one of the most widely used vegetables for canning purposes, as millions of cases are put up in this way annually.

When this crop is grown for market the earliest fruits always bring by far the best prices, and it is that all growers are striving for.

The first point to be considered is the seed. Carefully conducted trials have proved that seed grown in the North will produce fruit from one week to ten days earlier than seed grown in the South, and also the fruit raised from seed grown in the North will have much less seed than that from southern seed. Also when tomatoes are to be shipped the fruit should be as solid as possible and the less seed there is in a tomato the solider it will be. The grower should also find out what color the market to which he intends to ship demands, whether it is a red or pink color.

In the growing of early tomato plants little things should be carefully considered, as the way in which a plant is grown has a great influence on the crop. One point to be considered is that in order to have a good crop the plants should make a steady growth from the very start. A temperature of from 60 to 80 degrees should be maintained, as a low temperature will seriously check the plants while they are young.

Start the seed in a hotbed as early as possible or usually the second or third week in March in this locality. Have the soil well prepared in the bed and mark out rows six inches apart and about one-half inch deep. Sow the seed evenly in these rows, as nearly as possible, five seeds to the inch. If the seeds are sown thicker the plants should be transplanted as soon as the second pair of leaves appear to stand four inches apart each way. This will give them enough room to grow strong and stocky, and it is only by having properly grown plants that we can expect any success with the crop. Give plenty of fresh air and sunshine whenever the weather will permit and water the plants occasionally. It is better to have too little water than too much, as an excessive supply of moisture has a tendency to make the plants grow weak, and sometimes they will "damp off." If you have given your plants proper care they should have commenced to blossom when they are ready to go out into the field, which is about the end of May for the northern states.

The tomato is adapted to a wide variety of soils, but when growing for the early market a rather light, sandy loam is to be preferred.

If the soil is not very high in fertility, fertilizer should be applied that will be immediately available to the roots. For this purpose well-rotted manure can be put into the hill where each plant is to stand, and if a small handful of nitrate of soda is mixed with it will make it all the better.

The ground should be plowed quite early in the spring and worked over several times before the plants are set out. By so doing you will not only have killed most of the weeds, but will also have preserved all of the moisture, which is quite essential to the crop.

The setting out should not be done until the nights are warm and danger from frost is past. A warm, bright day should be selected and the work done as rapidly as possible.

In all cases the plants should be thoroughly watered in order that they may be taken up with moist soil adhering to the roots. Plants handled in this way will suffer but very little check from resetting, but will start at once into new life and vigor. Under favorable conditions new roots will form in forty-eight hours.

Cultivation should commence immediately after setting to loosen up the soil that was tramped down hard by setting out the plants. After that they should be cultivated after each rain, never allowing the soil to become hard or baked as such a condition of the soil will seriously check the growth of the plants. Cultivating should be kept up until the vines become too large for cultivating.

If the plants make too rank a growth and fail to set fruits the tips of the leading shoots should be cut or pinched off. This will cause them to set the fruit and also ripen much earlier than if allowed to grow unchecked.

The cultivation of the late or main crop is about the same as for the early except that main crop varieties may be used and the seed need not be started until the first part of April.

A source of much profit to many growers is the picking of all fruits that have commenced to turn in color before fall frosts. These fruits are wrapped in paper and placed on shelves in a cool cellar or room. In this way they will continue to ripen as late as December and often growers receive as high as ten cents per pound for the product.

GIVING PLANTS AN EARLY START

To the Editor of The Homestead:

To give such plants as sweet corn, watermelons, cucumbers and other early spring products a good start in advance of the season at which they usually are planted, we proceed as follows:

Take small, thin crates, pasteboard boxes, low tin cans, etc. Remove the bottoms from them, setting them on a six-inch layer of good soil in a large box. These little cans then are half filled with good, rich soil, and several seeds of whatever we are planting are placed in each can or box. These are covered with about a half inch or a little more of dirt and gently packed down.

The box is kept in a moderately warm room, being set in the window by day, to supply them with the essential light. On warm days the box is set out in the air and sunlight, but care must be taken that the seeds do not chill. Once a day, or as often as they seem to require it, the seeds are sprinkled with water. The surface soil also is stirred occasionally, to prevent its becoming hard or baked, which would retard seed germination.

Just before the plants come through the soil, the little cans and boxes are gently lifted from the large box and set out in rows, the dirt, seed and all, being allowed to carefully slip out at the bottom of the little boxes and are placed in shallow trenches prepared for the purpose. Some loose soil is then carefully packed around and over each hill, and in a day or two the plants burst through the ground, having a vigorous start that cannot be secured where the seeds are planted outdoors while the weather is so chill. M. Coverdell.

GROWING CAULIFLOWER.

Contrary to the general opinion this delicious vegetable can be grown as easily as a head of cabbage if proper methods are used in growing this crop. The first points to be borne in mind are that good heads can only be had by having them come before or after the hot weather, also the crop should be grown on rich, moist soil.

For the first or early crop the seed should be started in the hotbed or boxes indoors in March, sow the seed thinly and when the second pair of leaves have started transplant into other boxes or beds to stand four inches apart each way, give plenty fresh air and sunshine whenever the weather will permit so that your plants may grow strong and stocky, as if your plants are weak and spindling the chances for success are very small.

As soon as the ground is warm or usually about the end of April the plants may be set out into the garden to stand two and one-half feet apart each way. When taking up the plants have the ground well saturated with water so that the plants may be taken up with plenty of soil adhering to the roots. The plants will then suffer very little check from transplanting. If the ground is at all dry at the time of setting out the plants should be watered frequently until the plants

FREE BOOK ON ALFALFA

How you can grow it on your land
How to get "catch" first planting
How to select and prepare the soil
How to get more than average crops

These and hundreds of other questions that you want answered are clearly and distinctly covered in our new book just issued entitled "Alfalfa—Wonder Crop". This remarkable book contains a priceless fund of information about alfalfa growing, secured from many sources; United States Government, State Experiment Stations, the best posted authorities and successful growers. In simple language, easy to understand, it tells just the things that you want to know before you start to raise this greatest of all $cash money$ crops. This book will convince you that you have some land on your farm where you can profitably grow alfalfa. This information was secured at a great cost of time, money and research. It tells how to grow alfalfa, how to get results from first planting, how to select the field and prepare the soil. It tells all about fertilization, plowing, liming, preparing the seed, when to plant and how to plant. Tells what to do during the growing period, how to get bigger than average crops, and how to cut and cure. The contents of this book are worth many dollars to the farmer interested in growing alfalfa. This book is ordinarily sold for 25 cents but we will gladly send it without cost or obligation of any kind if you answer at once. Don't put it off—write for free book today.

are well started. Commence cultivating as soon as the plants are set out and keep the soil fine and loose at all times to preserve as much moisture as possible. If your ground is not in a high state of fertility a shovelful of well-rotted manure should be put under each plant.

For the late or fall crop sow the seed in a finely prepared seed bed about the end of May. Sow the seed quite thinly cover one-fourth inch deep and cover the seed bed with a cloth or laths until the plants appear above the ground. By sowing the seed thinly in the seed bed the plants can be left there until large enough to set out into the garden thus saving one transplanting. When the plants are of good size they may be set out into the garden as directed above. Usually at the time of setting out the plants for the late crop the weather is hot and dry and for this reason the plants must be frequently watered until they are well started. It is also a good plan to shade the plants for a few days after they are set out. If a rainy day can be had at the time of transplanting it will be a great advantage.

In order to have heads of the finest quality the plants should make a rapid growth and this can be greatly encouraged by frequent deep hoeings or cultivations and by watering liberally during dry weather. As good cauliflower seed is very expensive it pays to sow the seed thickly and evenly and to give the plants proper attention. The heads are soon discolored if the sun is allowed to shine upon them while they are protected and for this reason as soon as the hands commence to form the leaves should be tied together loosely near the top.

Success depends to a great extent on the quality of the seed you sow, and for this reason only the best seed obtainable should be used.

Deterioration in Wheat Yields Due to Root Rots.

By H. L. Bolley, Botanist N. Dakota Agr. College.

FOR a number of years the writer has been convinced, through his observations and experiments, that the lessened yields of wheat upon normally well cultivated, but old wheat lands of the Red River valley and various other spring wheat areas of the Northwest, are not due wholly to soil deterioration as to available plant food. It is, however, quite commonly asserted and has been the usual belief that such reduced yields should be largely attributed to a loss of available nitrogen in the soil.

My experiments, consisting of carefully planned plantings under greenhouse and field conditions, upon virgin soils and old wheat soils, covering a number of years and conducted for the purpose of trying out various ideas as to the cause of such crop deterioration, have each year given results of such nature as to convince me that one of the chief causes of the gradually reduced yields in the case of the wheat crop is not directly associated with a deteriorated nitrogen condition, but is brought about primarily by specific crop diseases which are more or less affected by the characteristics of the soil, and especially by atmospheric conditions.

Indeed, the results of the experiments planned and executed by the department of botany of the North Dakota Agricultural Experiment Station are of such nature as to show that the chief cause of the general deterioration of the yields of wheat on Red River valley lands rests in the action of parasitic fungi, causing root rot, wilting and blighting of the straw and heads, so that even on fertile lands the yield of seed may be reduced to such extent as to deceive one into believing that the land is worn out for wheat.

Continuous wheat cropping has, in my belief, been chiefly instrumental in the introduction of wheat parasites into the soil and into the seed, and that these parasites are carried in various ways from field to field and especially are transmitted from crop to crop by way of the seed.

Through the practice of continuous wheating, soils in many cases have become infected with from one to three or four definite parasitic fungi which attack after the same manner as the flax-wilt fungi attack and destroy the flax crop on old flax lands, and therefore such wheat lands may be said to be "wheat-sick" in exactly the same sense that old flax lands have previously been termed "flax-sick."

We have found that various types of fertilizers and chemical substances applied to the soil, and various methods of treating the soil, have a marked effect upon the type of injury that these fungi are able to accomplish: For example, by special treatment of such old "wheat-sick" lands we have been able to heighten the destructive effects of the diseases upon the crop. In certain other cases we have been able to greatly modify or improve the character of the seed and straw produced.

The diseases under consideration may attack the crop directly by way of the seed, by way of the soil, or through wind-blown spores.

The destruction of the crop so far as reducing the yield of plump seeds is concerned, seems to be quite closely proportionate to the speed of maturity and to the hardness of the straw; that is to say, a stiff, harsh straw suffers less than a soft, succulent straw.

While there is sufficient fertility available in our Red River soils to produce an abundant growth of straw, the quality of the straw produced is often of such nature that when attacked by the various soil and seed-infesting fungi it is unable to resist. The result is that the grain fails to fill. In many cases the young grains are cut off from the mother plant by the action of intervening fungi before even the milk stage is reached, with the result that all of the grains of a head, or most of them are shriveled. The action of the fungi is greatly heightened by hot, moist weather and poor drainage. The fungi often attack the grain internally and usually fruit upon the straw, giving it a spotted appearance simulating a minute rust, finally giving an ashy or grayish appearance to the upper portions, when the crop does not seem to mature as it should. On "wheat-sick" lands the plants do not properly stool because the young buds or stools are soon blighted or killed. At the time of stooling the portions below the ground and extending upward to the first or lower joints of the main stems usually show a tobacco color, or creosote coloration and even though there is plenty of moisture in the ground such wheat plants will show a blighting of the tips of the leaves which lead from the diseased parts, commonly called scald or tip burn.

To lessen the loss from this cause rotate, thus giving the wheat fungi which are now known to exist in such defective fields, a chance to die out. Corn culture and other crops than cereals associated with close pasture, are most likely to give beneficial results.

Sow only plump, properly colored seed wheat, for some of the chief wheat parasites which we have been studying infest the kernels of diseased wheat plants internally, and are thus carried each year to the new crop. No diseased grains retain a normal color, shape and size. Therefore grade the grain so as to eliminate the shrunken and shriveled seeds.

Treat all seeds by the formaldehyde method; for seeds from infested wheat crops also carry the spores of the wheat parasites upon the outside of the grain, as in the case of smut, and the formaldehyde treatment easily destroys all such external spores. This is one of the explanations why treatment for the prevention of smut has always shown an increase of crop, even though the grain so treated is known to be free from smut. This method of handling seed will prevent sowing large quantities of spores of the wheat parasites upon uninfected or slightly infected soils.

Avoid so preparing the land as to produce an excess of available nitrogen or the use of nitrogen fertilizers in

Remove One Nut and Share is Off

How Will the Tariff Affect Your Wool?

Just now, as new tariff laws are about to be enacted, wool growers everywhere are asking us what will happen to the price of wool. Market conditions are so uncertain that these men want our advice. They want the benefit of our 47 years experience. To keep our 50,000 customers posted and save them from selling at the wrong time, we have decided to issue Special Market Reports right along, until this tariff agitation is over. Each customer will receive, FREE, a copy of each Special Report. But we aim to print, each time, only as many Reports as are wanted. If you, reader, want our Special Reports, we will be glad to send them to you free of charge, provided you let us know **now, in advance.** Please don't get the idea that this puts you under obligations to us. You are welcome to this service, whether you sell your wool to the Mills, through us, or whether you sell to wool buyers.

This is certainly a remarkable wool season, and no man with 200 pounds or more should agree to sell his clip until he knows "inside" market conditions.

WRITE! Merely send name on postal. That puts you on mailing list all season. Our next Special Report is just ready for mailing. If you rush your postal in today, you'll get it. (11)

STOP THE LUMBER LEAKS! LUMBER ECONOMY SERIES, No. 4

When it comes to nailing down the dollars, Mr. Farmer, you have the only absolute system. Hats off to it, and no joshing. *But,* when you nail down, or nail *on, short-lived* LUMBER, you take chances with your character as a practical economist. CYPRESS is the only kind of Lumber that jibes with your system of nailing down dollars.

Why? Because it gets them both ways—"comin' and goin',"—it stops leaks in the roof, stable floor or fence post line, and also stops the leaks in your trusty old "weasel skin," both at once. It is the lumber you have either been using or thinking about these many years—"the wood eternal." It takes and holds paint perfectly "for looks"—it lasts practically forever without it; the U. S. Govt. Report says "a long time without paint"—*and then cites a case of Cypress* in Greenwich, Conn., where *Cypress Shingles laid in 1640 were still "serving well" in 1890,* and another at Clifton, Staten Island, which "had 200 years to its credit when last reported and was still in use. Is *that* long enough for *your* purposes? Then, as to paint. There's "no googly gum in Cypress" to stew out in hot weather and scale the paint.

COPY OF AN OLD WAR-TIME CARTOON. ▲ Cypress fence built when this was drawn would be as good today as ever

Fence Posts. They don't get "jiggly" the first time a shote scratches his back, and they hold a nail or staple long after "the cows come home." And they last, and last, and last, and LAST.

Fence Boards. That are not filled with weakening knot holes—*that's Cypress.* There's no substitute; don't let anybody tell you there is. Cypress, "the wood eternal," stands alone as a money-saving farm lumber.

Cypress Shingles. Is 228 years of continuous service a pretty fair record for a bunch of shingles? The Bergen homestead, in Brooklyn, N.Y., was built in **1662** with CYPRESS shingles which survived until **1890** when the old house was torn down and replaced by another building. Then there was Andrew Joline, who in 1735 built a home for himself in Elizabeth, N.J., roofing and siding it with CYPRESS SHINGLES, and at last reports it was in good enough state of preservation to be *still occupied as a residence.* (Quite a record.) Cypress Shingles possess the added virtue of having *more wood in them* and of weighing more than any other shingles now on the market. It is also true that the life is not roasted out of them in dry kilns to save freight. Cypress shingles average straighter, "clearer," truer and more uniform in width than any others. They "run true to form."

Acquainted With the Cypress Pocket Library Yet?

If you're interested in SHINGLES ask us for **Vol. 7**; if in SIDING send for Vol. 9. Vol. 1 tells you much about the wood—in fact it's the U. S. Govt. Report in full. An *Investment Guide* worth while.

undue amounts immediately preceding the wheat crop, unless the large available nitrogen supply is counterbalanced by phosphates or other mineral fertilizers suited to hasten maturity and harden or stiffen the straw, for wheat on such lands falls an easy prey to the fungi. A crop of corn or flax or millet upon such lands, preceding the wheat crop, will be apt to leave the soil in such condition as to conduce to the formation of a stiffer straw.

Give the soil thorough cultivation, drainage and aeration, and yet have the seed bed thoroughly compact. These are conditions which are particularly favorable to the production of the wheat plant, conditions which it can stand well, while the reverse conditions are apt to be favorable for the growth of fungi.

"CRANKY ABOUT HIS COWS."

To the Editor of The Homestead:

"That farmer is a crank about his cows," was a remark I overheard one day. It was made concerning a farmer in the community who owned a tiptop herd of dairy cows. He was making big money selling cream to a factory.

After hearing the above I took particular notice of this farmer. He was not cranky, but particular. He operated along the line of "what is worth doing at all is worth doing well." He was in love with the dairy business and treated his cows as his friends, and they were. When among them he would be patting and sleeking them with his hand, talking to them as if they could understand. And the cows as well as everything about their quarters appeared neat and clean.

The stables were airy and bright and cleanly so that the milk would absorb no odors at milking time. Every morning the cows were curried, then rubbed down with a good brush to remove all scurf from their hair. The stalls were cleaned and a fresh bedding of straw placed into them just before milking.

This man was also careful about feeding. He knew just what each cow required. The young cow was given the coarser grain while the older cow was given the ground mash. The roughness, too, for the older cows was tender and juicy. He was a liberal feeder and the cows showed their appreciation by a good flow of milk. A large tank of pure water was located in one corner of the lot, and the cows had free access to it. In the winter a tank heater was used to keep the water the right temperature. The neighbors called this special care crankiness, but it meant success.

Subscriber.

CURRENT EVENTS.

(Continued from page 7.)

committees in co-operation with the president.

THAT President Wilson will depend upon progressive republican senators for support was evidenced by the announcement last week that he had called in Senator La Follette, of Wisconsin, in conference and that he hoped to interest progressives and progressive republicans of the upper house in the measures which he is championing. Although the democrats have a majority in the senate there will doubtless be times when outside support will be necessary in order to put through Wilson's progressive measures and the president is taking time by the forelock in securing the co-operation of those to whom he must look for assistance. Since assuming office President Wilson has shown a desire to consult not only all parties, but all factions of the various parties, having within a few days had in conference such men as Senator Smoot, of Utah, reactionary republican; Senator La Follette, of Wisconsin, progressive republican, and Senator Poindexter, of Washington, an out-and-out progressive.

URGING the need of thorough organization and a continuation of work all along the line, Theodore Roosevelt addressed a conference of the progressives of Pennsylvania, at Philadelphia, last week. In one of the few speeches which he has delivered since the recent campaign, Colonel Roosevelt outlined the motives for the formation of the progressive party, in this manner: "The progressive party was founded primarily to meet the great awakening of conscience which we have seen in the American people during the last few years. Thoughtful men and women have grown to realize that it is impossible that either our present political or our present industrial conditions shall continue unchanged if the republic itself is to live and prosper. Self government is incompatible with dishonest government and a political democracy and a business oligarchy cannot permanently exist in the same country side by side." The success of the progressives in carrying Pennsylvania last year, by 50,000 votes over the democrats and 170,000 votes over the republicans, gives them hope for the future success of the party in that state, heretofore one of the strongest in the republican party. Plans are already being laid for systematic organization in townships and counties, the party proposing to enter vigorously into future campaigns.

JULIAN HAWTHORNE, son of the famous novelist, Nathaniel Hawthorne, author of "The Scarlet Letter" and "The Marble Faun," has been found guilty of using the United States mails to defraud by sending misleading literature in regard to mining claims. A sentence of a year and a day in the federal prison has been pronounced upon him. The government has been guarding the mails strictly of recent years, prosecuting men who send out unreliable reading matter tending to cause investors to put their money in unsound propositions, relying on the reputation of the men who are promoting the schemes or allowing their names to be used as figureheads. Swindles were of frequent occurrence a few years ago, but thanks to the government's activities they are far rarer today.

THE COUNTRY-LIFE MOVEMENT.

Prof. L. H. Bailey, of the New York Experiment Station, is the author of a recent work that comes out under the above title. According to Professor Bailey the country-life movement is the working out of the desire to make rural civilization as effective and satisfying as other civilization. He distinguishes this movement from the present popular back-to-the-land agitation. Some of the subject chapters in this work are: The Country-Life Movement; The National Movement; Some Interrelations of City and Country; The Decline in Rural Population—Abandoned Farms; Reclamation in Relation to Country Life; The Reserve Lands; What is to be the Outcome of Our Industrial Civilization; The Fundamental Question in American Country Life; Woman's Contribution to the Country-Life Movement; How Shall We Secure Community Life in the Open Country; A Point of View on the Labor Problem; The Middleman Question; County and Local Fairs; The Country-Life Phase of Conservation; Personal Suggestions. We believe that those who are interested in keeping themselves up to date on such subject as are outlined by Professor Bailey will find the expenditure of fifty cents, which is the price of this book, to be a sound investment if the volume is purchased. For a time at least we are able to secure this volume for our subscribers at the price mentioned and we hope that the volume will pass into the hands of a great many of our subscribers.

The recent decision of Vincent Astor to devote some of his wealth, youth and energy to the agricultural regeneration of New York state, took the form of action in the offer to provide farmers of Dutchess county, the seat of his ancestral estate, with white Tartar seed oats at $1.25 a bushel. Old farmers say that young Astor has shown good judgment in the selection of the first neighborhood crop to be improved. Oats in Dutchess county rarely grow over three feet in height and the heads are scanty and the kernels thin. The Astor farm guarantees that its seed oats will improve the crop in the county, producing five feet of straw, with long heads and thick, plump, heavy kernels.

It always pays to increase the acre yield; it may not always pay to increase the number of acres devoted to a given crop. What you farm is as important as how you farm, and how you sell may be more important than either.

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LEGAL CAUTIONS.

Do not sign any instrument in writing unless you understand it thoroughly. If you are of sound mind and can read, no court will permit you to avoid a written instrument you have signed upon the ground that you did not fully understand it.

In business do not try to get something for nothing. When you do so you are playing the other fellow's game. No one deals with you solely for your benefit. There is no sentiment in business.

Do not give your promissory note to a stranger for something which he promises to deliver to you in future. He may be neither honest nor financially responsible. He may sell your note before it is due, for a valuable consideration, and fail to deliver the goods, and you will nevertheless be liable for the amount of the note.

When making a written contract with a firm or corporation, through its agent, do not rely upon a verbal statement or promise of the agent when it differs from the written contract. If there should be a suit upon the contract, the law would not regard such verbal statement or promise as valid or binding.

Do not rely upon the verbal guarantee of any agent who sells you something, as to its quality or condition. Such guarantee will not be binding on the principal, unless it was duly authorized, and this is often very difficult to prove.

Do not depend upon a mere verbal guarantee in any case. It is always difficult to prove, and witnesses are generally forgetful and indifferent. It is easy to put a guarantee in writing which fixes the responsibility without other evidence.

Do not depend upon the guarantee of a firm or company, as to the condition or quality of things sold to you, unless you are satisfied that the firm or company is financially responsible and that its general course of dealing is honorable. The same caution is applicable when dealing with private individuals.

Do not be persuaded against your better judgment to sign a note as surety for a friend. In the language of Solomon, "A man void of understanding, striketh hands and becometh surety in the presence of his friend." And again, "He that is surety for a stranger shall smart for it, and he that hateth suretyship is sure."

When a written contract is made, do not allow the other party to carry it away. Have it made in duplicate, so that each party may keep a copy.

LAW QUESTIONS CONSIDERED.

PAYMENT FOR BULL'S SERVICES.

Mr. Roy Vaughn, Selma, Iowa.—Last summer I bought from a neighbor a cow that was with calf by a bull owned by another neighbor. Nothing was said as to who should pay for the service of the bull. Who is legally liable for it?

Answer.—The man from whom you bought the cow is liable for the service fee to the owner of the bull. The law of Iowa does not provide for a lien to secure payment for the services of a bull. There is a lien law as to stallion services.

WILL—ESTATE FOR LIFE—WIDOW'S RIGHT.

An Iowa Subscriber.—A and B were husband and wife. Neither one had any property when they were married. They worked together and accumulated eighty acres of land. A died leaving a will by which he gave all his property to B during her lifetime. B accepted the will and it was probated. After a number of years B wants her one-third of the property, so she can leave it by will to persons whom she desires may have it. Can she do this?

Answer.—We assume that the property was in the name of the husband when he died and B having accepted the terms of the will gave her only a life interest in the property, that is, the right to use it and receive the rents and profits of it during her life. She could, of course, sell this interest, but the purchaser would have to give it up at her death, and there is no way for her to get one-third of it absolutely so she could will it to anyone after her death. She could have refused to accept the will in the beginnning and then she would have been entitled to one-third but not now.

DIVISION OF PROPERTY AMONG HEIRS.

A Subscriber, Fairmount, N. D.—A man died leaving four children and real estate to be diivded between them. The youngest girl is not yet of age. Suppose she should get married, could the real estate be divided right away?

Answer.—Where real estate is left to heirs and one or more of them are not of age, they are not thereby prevented from dividing the property. Legal proceedings can be brought to have partition made of the property, and the heirs who are under age will have to have a guardian appointed by the court to act for them in said proceedings and represent their interests, and division of the property will then be made as if all the heirs were of full age.

BOUNDARY LINE—PARTITION FENCE.

A Subscriber, Swan, Iowa.—I own the southwest quarter of a section of land in Iowa and B owns adjoining land on the south and east. There is no road between our farms and the fence is not straight; part of the fence is on my land and part of it on B's land. I have owned my place two years and B has owned part of his place one year and part of it six or eight years. (1) I want to build a new partition fence. Must I place it where the fence now stands, or set it in line with the corner stones? (2) If a surveyor is required to locate the corners, must I bear all the expense? (3) Part of the partition fence on the south line of my land is hog tight. B pastures hogs and I pasture sheep. I wish to have a sheep-tight fence on the rest of the division line and will make my part this spring. Can I compel B to make his part sheep tight?

Answer.—(1) If the corner stones were regularly established and you and B agree as to the corners the fence should be set on a straight line between them, but if you do not agree as to where the corners or line should be, then the only way to settle the matter is a proceeding to be brought by either of you in the district court to establish the boundary line and until that is done you would have no right to change the location of the fence without B's consent. (2) If a surveyor is necessary to fix the boundary line each party must bear half the expense. (3) When you shall have completed your part of the fence, notify B to do likewise and if he refuses to do so request the fence viewers to meet and order him to make his fence and it will be their duty to do so, and if he fails to comply with the order you may make the fence and unless he pays for it you can recover double the cost from him.

NO INSPECTION NECESSARY.

A Subscriber, Inman, Neb.—I expect to move from Nebraska to Michigan about the last of March and will take with me some horses of mixed breeding, none registered or eligible to registration. Does the law of Michigan require that such animals be inspected or tested in moving them to that state?

Answer.—It does not.

Ask your neighbor to subscribe to The Homestead.

What an Engine Did

By R. E. Olds, Designer

My fame as a car builder, after 26 years, is based in large part on my engine.

To me it's an old, old story. Perhaps it is new to you.

A Lifetime

I was one of the world's first builders of gas engines. Long before the days of automobiles, the Olds Gas Engines were known half the world over. And they are today.

It has taken a lifetime to develop an engine like the one in Reo the Fifth. And even my rivals concede it to be one of the great engines of the world.

My catalog states all the details about it. I won't bother with them here. But the fame of this engine is based on four things:

Its unusual power—

Its enduring silence—

Its remarkable endurance—

Its ease of adjustment.

Radical Tests

We avoid trouble for you by putting each engine to five radical tests in our factory.

Each is run for 10 hours with outside power, then another 10 hours with its own power. Then we take it apart and inspect it.

Then it is made to run a blower, and tested at various speeds. Then it runs an absorption dynamometer, as a measure of its power. Then, in the finished car, we give it the hardest sort of road test.

These tests require 48 hours. But thousands of these engines, run for years and years, are still in prime condition.

We use on this engine, to save ignition troubles, a $75 magneto. And we doubly heat our carburetor, to deal with any gasoline.

So Everywhere

In every part of this car we use the same precautions.

The steel is twice analyzed.

The gears are tested to stand 75,000 pounds per tooth. The springs for 100,000 vibrations.

We use 190 drop forgings.

We use 15 roller bearings.

The tires are 34x4.

Each body gets 17 coats.

When you get a car built like Reo the Fifth there is very small cost of upkeep.

Unique Control

We use in this car the only center control which is simple and out of the way.

All the gear shifting is done by moving a small rod only three inches in each of four directions.

There are no levers, side or center, so the front is clear. Both brakes are operated by foot pedals.

And in this car you find the left side drive, as in the finest cars this year.

Write for our catalog and we'll direct you to the nearest showroom.

POULTRY DEPARTMENT

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be enclosed with inquiries. Address all letters relating to poultry topics to this office.

FEEDING POULTRY FROM THE GROUND.

To the Editor of The Homestead:

The method of feeding poultry from the ground has for a long time been condemned by the best authorities, but still it is yet practiced too much. Especially is this a dangerous method of feeding wet food. The ground where poultry is kept, although it may appear to be perfectly clean, contains much pollution and filth, more or less of which is picked up with the food. This may cause various diseases to start in the flock with great losses. This is very often the case and the poultryman sees no apparent reason for a disease starting. Sand, gravel, and grit are necessary for the poultry and even clean, fresh ground will not hurt it, but it is the disease and filth-laden soil that causes the trouble.

While such feeding is very dangerous to the old chickens it is still more so for the small ones and every year thousands of little chickens die from diseases contracted in just this way. Their bodies are so weak that they cannot resist the germs taken into the system in this way. This is one of the frequent causes of bowel troubles and general weakness which is so prevalent among young chicks. Perhaps the reason for this is that chicks are more frequently fed wet food than the older chickens and so are more apt to pick up a greater amount of this filth with their food.

We cannot be too careful about feeding the poultry on a clean place. They should be fed from a trough, hopper, dish or a cleanly swept platform. The poultryman who exercises a little care along this line in feeding will be well rewarded. It is one of the first very important things toward the prevention of diseases.

Kansas. Gregor H. Glitzke.

HOW TO DETECT THE LAYERS.

To the Editor of The Homestead:

I have not used trap-nests nor kept individual accounts with hens as layers, but to be sure that I keep no drones I have a little red paint in the chicken house, and in the fall I dab a little paint on the back of a hen when I find her on a nest. After a time when we want a chicken for the table I get one that is not marked. By this means I have nothing but layers by the time winter fairly begins. My flock of forty hens and pullets did well through the winter. From February 9th to 15th inclusive. I gathered sixteen and one-half dozen eggs and the next week sixteen dozen. In my breeding pen are two hens and seven pullets and for the last week they have laid seven or eight eggs every day. I have utility chickens. I am not in the fancy poultry business but am trying to work up a good-looking flock. J. W. Cheney.

Van Buren county, Iowa.

POINTERS.

—**Frank A. John**, Bedford, Ia., quotes prices on Light Brahma eggs in his advertisement appearing elsewhere in this department.

circumstances will substitute. Money will be refunded if we cannot fill orders."

—Elsewhere in this department appears the advertisement of Ben R. Poortinga, Cordova, Iowa, offering Rose Comb White Leghorn eggs from prize-winning stock for sale.

—Barred Plymouth Rock eggs from three exhibition matings and also from his farm range flock are offered for sale by M. E. Kraft, Brooklyn, Iowa, in his advertisement appearing elsewhere in this department.

—Elsewhere in this department will be found the advertisement of Mrs. Jacob Conner, Sigourney Iowa, in which she offers Black Langshan eggs for sale from fine, large-boned farm stock at very reasonable prices.

—Mrs. C. R. Switzer, Lewis, Iowa, writes: "We have a choice lot of Indian Runner ducks; they are well marked and of a good laying strain. I am ready to book orders for eggs." See her advertisement in this department.

—Mrs. A. H. Klepper, Muscatine, Ia., has a flock of White Plymouth Rocks of the Fishel strain. They are farm raised, all cockerels scoring 93½ to 96. Her advertisement offering eggs for sale appears elsewhere in this department.

—A. Kool, Cordova, Iowa, in sending copy for his Black Langshan egg advertisement elsewhere in this department, writes: "We have a select lot of hens headed by roosters that are second to none. They are of the Gold Medal strain and all high-class stuff."

—The Premium Poultry Yards, Newton, Iowa, raise forty different varieties of the leading land and water fowl. In their advertisement elsewhere in this issue they are offering eggs for sale, either by the sitting or 100.

—Elsewhere in this department of The Homestead is the advertisement of Mrs. Laun, Floyd, Iowa, offering Rhode Island Red eggs (either comb) for sale at very moderate prices. She also quotes prices at which she will sell laying hens.

—"My flock of Barred Plymouth Rocks," writes Asa Anderson, New London, Iowa, "are healthy, large, nicely marked and are of the Bradley Bros. strain. See my advertisement in this department for egg prices. Write your wants."

—Verne Argo, Tipton, Iowa, announces in his advertisement elsewhere in this department that he won 100 ribbons on his Single Comb Brown Leghorns, Single Comb Rhode Island Reds, White Wyandottes, Pekin ducks and fancy pigeons in 1912.

—In furnishing copy for advertisement found elsewhere in this department, R. Palmatier & Son, Greene, Ia., advise us that they have mated two grand pens of Silver Laced Wyandottes from which they offer eggs for sale at prices named in their advertisement.

—Harry Anderson, Beaver Crossing, Neb., has special matings and a range flock of Barred Plymouth Rocks from which he is offering eggs for sale in his advertisement elsewhere in this department. He will guarantee satisfaction and sell his eggs at reasonable prices.

—Mrs. E. P. Gaddis, Griswold, Iowa, makes a specialty of Single Comb Rhode Island Red baby chicks. She will guarantee safe arrival at prices named in advertisement elsewhere in this department. She can also furnish eggs for hatching from three fine pens at reasonable prices.

—The advertisement of Matthew Mertz, Des Moines, Iowa, in which he states he wants to buy Indian Runner and Pekin duck and Toulouse geese eggs in large lots, will be found elsewhere in this department. He also wants to buy Hamburg, Cornish Indian Game and Houdan eggs.

—Mrs. H. I. Branson, West Branch, Iowa, won a number of premiums on her Barred Plymouth Rocks at the Iowa State Fair, Cedar Rapids and other shows. She will send circular free. Prices at which she will sell eggs are named in her advertisement appearing in this department.

—"I have a farm flock of 200 pure-bred Rose Comb Brown Leghorns" writes Mrs. Laura Mather, Clarksville, Iowa, in furnishing copy for her advertisement appearing elsewhere in this department. "They will prove satisfactory to all those wishing something extra good at a very reasonable price."

—Mrs. Fred Sievers, Audubon, Iowa, states that her Barred Plymouth Rocks have the standard requirements based on the qualities required in a general-purpose fowl, also have the points deemed essential in an exhibition fowl. Her advertisement offering eggs for sale appears elsewhere in this department.

—Mrs. Henry Newcomer, Forreston, Ill., is booking orders for eggs from her choice flock of pure-bred Rouen ducks. All orders, no matter how large or small, will receive careful attention and eggs will be shipped promptly. See advertisement elsewhere in this department and when writing please mention The Homestead.

—Mrs. Will Michael, Selma, Iowa, in furnishing copy for her advertisement elsewhere in this department, writes that she has been a breeder of Single Comb Brown Leghorns for fifteen years, having added new blood each year from the yards of some of the most noted breeders. Each year she selects from eighty to 100 of her very best hens and early pullets for breeding purposes and in this way she has build up a large strain of Leghorns that are also excellent winter layers. This year she has 100 in her flock, including scored hens and winning pul-

lots. They are mated to seven large male birds, scoring from 90¾ to 93½. They have good exhibition qualities and striping in hackle and saddle.

—Read the advertisement of Peter Reinbold, Clarksville, Iowa, offering Rose Comb White Leghorn eggs for sale, that appears elsewhere in this department.

—Carey R. Jones, Iowa Falls, Iowa, is prepared to furnish readers of The Homestead with Rose Comb Brown Leghorn eggs as per advertisement elsewhere in this department.

—The White Orpington egg advertisement of J. P. Schowalter, Wayland, Iowa, in which he quotes prices on eggs from two different pens, appears elsewhere in this department.

—Barred Plymouth Rock and fawn and white Indian Runner duck eggs can be purchased from Charles J. Clarke, Greene, Iowa, at prices named in his advertisement elsewhere in this department.

—Ethel H. Shaw, Newton, Iowa, can supply Homestead readers with Mammoth Toulouse geese eggs as per advertisement found elsewhere in this department. She also has a few ganders for sale.

—R. R. Stewart, Charles City, Iowa, has been a breeder of Rose Comb Brown Leghorns exclusively for fifteen years. He is quoting prices on eggs in his advertisement appearing elsewhere in this issue.

—"My White Wyandottes are large, pure white birds; fine shape, good combs and eyes, heavy, yellow legged, healthy and vigorous," writes Mrs. Geo. Roe, Bellevue, Iowa, in sending copy for her advertisement that appears elsewhere in this department. "The best of care will be taken in preparing eggs for shipment."

—E. S. Dyas, Bellevue, Iowa, whose advertisement appears elsewhere in this department, writes that he is prepared to sell White Wyandotte eggs by the sitting or 100, but that he will only have a limited number of Pekin duck eggs to spare and these in one or two-sitting lots. He also says that he will send out nothing but fresh eggs.

—Mrs. S. A. Spalti, Pleasantville, Ia., in furnishing copy for her advertisement offering Single Comb Rhode Island Red eggs for sale, writes: "The eggs offered are from strong, vigorous, pure-blood Reds, having had farm range. I purchased pure breeding stock as the foundation of my flock and it has been my aim from year to year to make it better."

—Mrs. Jake Waltemeyer, Melbourne, Iowa, is advertising Rhode Island Red eggs in this issue of The Homestead at $1 per fifteen or $5 per 100, which is very reasonable, concerning the high quality of her flock. She has paid especial attention to early maturity and the laying qualities of her birds. Send her an order and you will be well pleased with the results you obtain.

—C. H. & J. E. Bauman, Pella, Iowa, whose advertisement appears in this department, writes: "Our flock of Brown Leghorns are in fine shape and the eggs we are offering for sale this season are all from the best stock. We are confident that our customers will be pleased with the stock from these eggs. Any orders, no matter how large or small, will receive our careful attention."

—Mrs. Robt. Hunt, Earlville, Iowa, in sending copy for advertisement found elsewhere in this department, writes: "We have a fine flock of Barred Plymouth Rock chickens, well barred and large boned. Have been a breeder of this variety for ten years exclusively. Also have some large-boned Mammoth Bronze turkeys and Toulouse geese. Will try to please all customers. Send in orders early."

—"My Barred Plymouth Rocks," writes Mrs. H. J. Hess, Waterloo, Ia., whose advertisement appears elsewhere in this department, "are large of size and finely marked. I have many pens containing grand birds closely related to noted winners at Chicago and other large shows. The White Wyandottes are choice birds of a noted prize-winning strain, of good size and fine shape. Eggs will be carefully packed and orders filled as promptly as possible."

—Albert A. Foster, Russell, Iowa, in furnishing copy for advertisement in this department, in which he is offering Barred Plymouth Rock eggs for sale, writes: "The Homestead has been a successful medium in selling our birds. I have eggs to offer from six grand matings. My Buff Plymouth Rock hens are better than ever before. They are mated to birds that are prize winners and from a heavy laying strain. They are large, heavy boned, with deep, narrow barring and excelled by none. My circular is now ready and I am now booking orders for eggs."

Buff Rocks and Mammoth Bronze Turkeys.

—M. Henningsen, Dike, Iowa, whose advertisements of Buff Plymouth Rocks and Mammoth Bronze turkeys appear under their proper headings in this department, writes: "In the past we have enjoyed a most liberal patronage from Homestead readers. In Buff Rocks we have something especially good to offer. The fact that they are trapnested will appeal to anyone interested in better paying poultry. Our Mammoth Bronze turkeys have the bone, quality and true markings. Our flocks are headed by two exceptional, extra choice toms, one weighing forty-one pounds, the other a thirty-five-pound young tom. See cut in our new mating list. We have issued a new mating list for 1913, beautifully illustrated with true photographic cuts of our stock, and will be pleased to send the mating list to anyone interested."

LEGHORNS.

Trinidad Lake Asphalt
Asphalt-saturated wool felt
Trinidad Lake Asphalt

Genasco

THE TRINIDAD-LAKE-ASPHALT
Ready Roofing

Genasco is made of Trinidad Lake asphalt—Nature's everlasting waterproofer that gives it life to resist rain, sun, wind, snow, heat, cold, and fire.

The natural oils of Trinidad Lake asphalt preserve this life in Genasco through years of all kinds of weather, on roofs all over the world.

It continues to resist after roofings made of artificial "asphalts" have gone to pieces.

Get Genasco of your dealer. Mineral or smooth surface—several weights. The **Kant-leak Kleet** for smooth surface roofing makes the seams absolutely watertight without cement and prevents nail-leaks. Write us for the Good Roof Guide Book and samples, free.

CLUB RAISERS WANTED

I want a local subscription representative in each town in Iowa, Illinois and Nebraska, where I do not have a solicitor at present, to take subscriptions for The Homestead during the winter months. An energetic person can make excellent money working for me.

A Justice of Peace and farmer made $347.00 during December, January, February and March last year with practically no effort on his part. Just as he happened to meet his friends he asked them to subscribe.

An old soldier has earned $386.00 in the last year and has not been away from his blacksmith shop to solicit subscriptions.

A lady who had sold extracts all her life took up our work last winter and has made over $300.00 this year without leaving her home town.

It requires no particular ability to become a subscription representative. There is no reason why you should not make from $300.00 to $600.00 this winter, looking after my subscription interests in your locality.

If you prefer premiums to cash commissions, write us for a list of the nice presents we can make you for raising a club in your neighborhood. We have everything useful to give away from egg beaters to sewing machines and gold watches. Address

James M. Pierce, Publisher Homestead, Des Moines, Ia.

THE HOME

LETTERS intended for publication should be accompanied by the name and address of the writer, not necessarily for publication, but as a matter of good faith. All communications intended for this department should be addressed to Postoffice Box 639, Aurora, Missouri.

WITH THE EDITOR.

The vegetable and flower garden may be compared to the class that had practiced exercises for strengthening the muscles of the back and developing those of the chest. "Now," said the teacher, "let us stretch and wave our arms and see if we cannot make really beautiful curves."

It is good to be practical and plant a vegetable garden. It is just as good, sometimes better perhaps, to devote time to a flower garden. "There is no money in a flower garden." Well, there are things that are better even than money. And in raising flowers one may find some of them—beauty and rest and a communion with nature which is the finest tonic in the world.

"But my front yard is not fenced." Well, never mind that. Perhaps if you set your heart on it and backed it up by thinking and doing the front yard might become fenced. If not, go ahead anyhow. There is a corner somewhere which could be enclosed. Make up your mind that it is to be enclosed this spring. If it cannot be managed any other way some of the egg and butter money might be invested for that purpose. It is better that the family do without table luxuries for a little while than that they lack the refining influence of beauty and the housemother do without the restful refreshing of flowers for all summer.

"Suppose I manage a piece of fenced ground, what shall I raise?" That is a big question, and yet not such a big one, after all, because there is such a variety of things that respond generously to the efforts of a beginner. Anyone can raise petunias, asters, nasturtiums, phlox, drumondi, marigolds, zinnias, balsams and coxcomb. And they all insure bloom that will delight the eye. Or if one prefer hardy perennials there are hollyhocks and Shasta daisies, Sweet William and phlox and pinks and half a dozen others which some flower-loving neighbor is almost certain to offer you roots of if you say you hope to start a flower garden. And while you are planning for bloom do not forget that foliage is beautiful. Plan to have a few cannas or castor beans and some vines clambering over porch or fences. A climbing rose or a clematis paniculata pays for itself in one season and sends out new runners year after year. For quicker returns there are the dainty cypress and the sturdy Madeira vine, not to mention the scarlet runner and the morning-glory.

Fortunately there are many who are not hampered by lack of fences or the wherewithal to purchase a few bulbs and roots and seeds. For them the seedsman's catalog is a treasure trove. But a word of advice may be in order. Do not try many new varieties in one season. Let the old standbys be well represented and a few new things tried if you want to be sure of satisfaction.

Some flowers love strong sunshine. Of these is the double yellow marigold and the rudebeckia—and a gorgeous bed they make with the golden glow in the center and the marigold for border. For such a bed white petunias make a dainty fringe that will be a thing of beauty as long as the yellows blaze, if care is taken to cut back the vines at midsummer.

Few plants give greater returns for the investment than do petunias. Next to them might be mentioned asters some of which are as beautiful as chrysanthemums. A bed of white and purple or white and pink asters bordered with alyssum or ageratum or candytuft, according to the color desired, is a thing of beauty and almost no care.

Everyone who grows flowers comes to have favorities, so that to omit mention of any is to have some one exclaim, "Wonder why no mention is made of sweet peas, or of poppies, or of half a dozen other things." The best way is to begin with a few things, learn their habits and their desirability and from season to season add to the number, rearranging every season with view to color harmony.

A well-planned fence corner, a single bed, or a wide border arranged with view to height and color and succession of bloom often gives more pleasure than many times the space less well managed.

It is not well to be in too great a hurry digging and seed sowing. That veteran flower lover and flower grower, Eben E. Rexford, says that in the enthusiasm of the spring season we are quite likely to put the seed into the ground before the earth is in proper condition to receive it. We should wait until warm weather is assured and the sun has had time to sweeten the soil. If we sow while the ground is cold and wet there is risk that the seed will rot instead of germinate, and so our haste makes waste, and leads to disappointment besides.

One other word of warning is in order. It is a mistake to cover fine seed deeply. Except in the case of the sweet pea anything like a furrow is inadvisable; nasturtium and seeds of that size may be planted in a ridge, but small seeds should not be covered at all. The ground should be worked very fine, the seed scarred

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

Out of the shadow of night
The world rolls into light.
Oh, fear not in a world like this
And thou shalt know e'er long,
Know how sublime a thing it is
To suffer and be strong.
—Wanta Filomena.

Erase the cause and the consequences will be effaced!

Mistakes were meant to be milestones, not head stones!

MAN IS A FAILURE WHEN—

He has no confidence in himself or in his fellow men.

He values success more than character and self-respect.

He does not try to make his work a little better each day.

He tries to rule others by bullying instead of by example.

He loves his own plans and interests more than humanity.

His friends like him for what he has more than for what he is.

He is so busy that he has no time for smiles and cheering words.

He is so burdened by his business that he finds no time for rest and recreation.

He lets a day go by without making someone happier and more comfortable.

He values wealth above health, self-respect and the good opinion of others.

He becomes so absorbed in his work that he cannot see that life is greater than work.

He does not care what happens to his neighbor or to his friends so long as he is prosperous.

PLANTING SWEET PEAS.

The trench is made a foot deep and the same in width. In the bottom is placed well-rotted manure to the depth of three inches, stamped down firm. This manure is covered with three inches of soil. On this the seeds are sown, covered with two inches of soil and stamped down hard. The trench must now be filled to the top and covered six inches above the top with leaves, straw or hay, not with manure.

In March come the March winds—
They blow and blow.
They sweep up the brown leaves,
That green ones may grow.
—Houghton.

FROM THE HOME COOK BOOK.

Beef Timbales.—Trim the fat and gristle from cold meat and put through a meat chopper. To one pint of meat add one teaspoonful of salt, add a dash of pepper. Put into a saucepan half a cupful of stock, two tablespoonfuls of bread crumbs and one tablespoonful of butter; beat together over a slow fire and add the meat. When hot take from fire and stir in carefully two eggs, well beaten. Put the mixture into buttered custard or timbale cups, place them in a pan half filled with hot water and bake fifteen minutes in a moderate oven.

Raw Fried Potatoes.—Pare and slice into very thin, even slices. If potatoes are large they can be halved or even quartered before slicing. Lay in cold water at least an hour before frying. Heat about one tablespoonful of good, sweet lard or unsalted beef drippings in a frying pan. Let heat, then drain potatoes well, put in pan and cover and let steam about ten minutes. During this time shake pan a few times so they will not stick, then uncover and with a spatula turn potatoes. To be correctly made raw fried potatoes should be nicely browned and tender inside they must not be mashed or scorched; so it is best to start with unsalted drippings, now begin to fry very slowly without cover; if they do not get tender in the same proportion as they brown cover again to let them steam. Toward the last shake salt and pepper over and add a generous tablespoonful of butter. Shake and turn so all are evenly seasoned and serve very hot. To be at their best these potatoes should be served as soon as done. The amount of shortening given is sufficient for six to eight medium potatoes. For a change potatoes can be cut into small strips or cubes and fried raw.

Currant Bread.—Ingredients for the sponge: Three cupfuls of sifted flour, two cupfuls of warm milk and water (equal parts), one teaspoonful of sugar, one teaspoonful of salt, one cake of compressed yeast. Ingredients for second mixing: One-fourth cupful of lard and butter (equal parts), one-half cupful of sugar, one egg, one cupful of cleaned currants, three cupfuls of sifted flour. Method: Cream the shortening, sugar and egg until extremely light (creaming is to mix those ingredients with a perforated spoon until they are well blended and fluffy), then with the spoon beat the mixture into the light sponge, add the currants next, then beat in the flour gradually as in milk bread, knead, mold and bake same as milk bread.

SUGGESTIONS FOR THE HOUSEWIFE.

A teaspoonful of turpentine boiled with your white clothes will greatly aid the whitening process.

Vinegar in which homemade cucumber pickles have been preserved should not be thrown away, but used in salad dressing. The flavor is delicious and cannot be gained in any other way.

To have boiled potatoes fluffy, pour the water off when they are done, then let them stand in the dish they were cooked in on the back of the stove for a few minutes, giving them an occasional shake.

When you are boiling rice take care not to throw away the water. Strain it into a bowl and you will find it makes a most excellent starch. This starch may be used either hot or cold. Two or three drops of turpentine are an improvement.

When grease is spilled on a board floor sop cold water on it to harden it and keep it from sinking in. Then scrape it from the floor and clean the spot with soda and hot water.

Try boiling cracked dishes in enough sweet milk to cover, and let it continue boiling for forty-five minutes. This glues the crack tightly together and makes it invisible, and the dish will stand almost as much usage as when new.

AMONG OURSELVES.

Sometimes our friend Mrs. Lowater brings us an offering in verse, sometimes her message is in prose, always she is welcome. Today her book talk will add to the pleasure and profit of our meeting:

I read a book talk in the Home Department not long since in which "The Shuttle" was classed with "The House of Mirth" and "One Woman" and, like them, called a harmful book. Now I cannot understand this. The only reason I can possibly imagine is because Bettina met unpleasant experiences, and Lily Burt did also, therefore they must be the same kind of a book, and both injurious. Now this is the difference between them: The disagreeable things that came to Lily occurred only because she was living a degrading and unwomanly life—a pure-minded, right-living young woman could not possibly have known them. Her life gave occasion for both men and women to treat her in an unpleasant manner, and she met these troubles in the cowardly and foolish way to be expected of her. Now, Bettina met unpleasant things, but she met them while discharging a sacred duty—saving her sister from moral and social destruction at the hands of the brute she had married. Bettina was the only person who could help her—the rank and position of the man made it impossible for another man, even her father, to help her. Bettina acted with a courage, prudence and intelligence unknown before, I think, in any character, even in the greatest of fiction. Is there any mind, however unformed, that could be injured by reading the story of her success? I do not believe that there is any mature woman who cannot look back to certain places in her youth and wish that she had known some fine character in a book who would have shown her what to do in her own emergency. It is not pictures of hard, unpleasant things in real life which should condemn a book—it should be judged by the way its characters meet them. If they overcome them, and become stronger, nobler men or women for the struggle, that book is doing a good work and may be a heaven-sent help to some hesitating soul. I know a small city in Massachusetts where the keeper of the public library refused to allow "The Danger Mark," by Robt. Chambers, to circulate. She labeled it "a bad book," It is a story of a fight of a young man and a young woman against their hereditary enemies. In the young man's case it was drunkenness, through many generations. In the young woman's, a character and habit of mind descended from a mother and other ancestors who had eloped from their husbands or had other moral lapses. Their genuine love for each other impelled them to make the fight, and though they nearly gave it up several times, they conquered their enemies and reached a height where they could defy them. Now I do not doubt that this book would have borne a saving message to some struggling creature—perhaps many. Yet the narrow-souled librarian could only see that it talked about unpleasant things—things that were not "nice"—so she condemned it. If life itself were always "nice," there would be no need to consider things that are not nice—but, unfortunately, it is not.

Mrs. Lowater's views are those of many thoughtful persons who have come to understand that sometimes a novelist is a preacher whose book is a pulpit and whose story is a sermon. If a writer makes sin or lax morality attractive, it is a case of becoming defiled through touch pitch, but if he makes vice abhorrent, if his characters make appeal for the higher, if the story of their struggle may be an incentive to others, a different standard of measurement is in order. At the same time, until judgment is matured and discrimination developed it is just as well that young people's reading be along other lines. The problem novel is meat for men, not milk for babes.

Echoes of our strawberry day are still in the air and it seems to me good we should "lend our ears" while yet we may. It is the music of Busy Bee's song that I would have you hearken to first:

What I have done in the way of raising strawberries any woman with fairly good health and a little bit of love for hard work and gardening can do as well as I. I was surprised at the results I got. To put out a strawberry bed, one must commence the year before, unless one already has at hand just what is wanted, and what is wanted is land where corn has been grown and kept thoroughly free of weeds. I had to commence a year in advance on an old weed-grown scrub orchard. We cleared the dead weeds by hand. Husband then gave it a good coat of well-rotted barnyard manure,

Queen Range

Easy To Cook With

"A Kalamazoo Direct to You" Trade Mark Registered And Gas Stoves Too

Kalamazoo ranges make happy housewives—get the big Kalamazoo catalogue that proves Kalamazoo conveniences—economy—handsome appearance. Latest features—oven thermometer, glass oven doors, etc. Astonishingly liberal offer. Kalamazoo stoves and ranges are

Easy to Try—Easy to Buy

We give you **30 Days' Free Trial—360 Days' Approval Test.** You get the **absolute factory price.** You save from $5 to $40. It's all the same to us whether you send all cash or make **small payments.** We ship the day your order comes. We **pay freight** right to your station. Get our big illustrated book of **400** styles and sizes of stoves. Read the $100,000 Bank Bond Guarantee. **Ask for Catalogue No. 165 today.**

KALAMAZOO STOVE CO., Mfrs., Kalamazoo, Mich.

We also make Furnaces and Gas Stoves. Special Catalogue on request.

"RANGER" BICYCLES

Have *imported roller chains, sprockets and pedals; New Departure Coaster-Brakes and Hubs; Puncture Proof Tires; highest grade equipment* and many advanced features possessed by no other wheels. *Guaranteed for 5 years.*

FACTORY PRICES direct to you are less than others ask for cheap wheels. Other reliable models from $12 up. A few good second-hand machines $3 to $8.

10 DAYS' FREE TRIAL We ship on approval, *freight prepaid*, anywhere in U. S. *without a cent in advance.* DO NOT BUY a bicycle or a pair of tires from *anyone at any price* until you get our big new catalog and *special prices* and *a marvelous new offer.* A postal brings everything. *Write it now.*

TIRES Coaster-Brake Rear Wheels, lamps, parts and sundries *half usual prices.* Rider Agents everywhere are coining money selling our bicycles, tires and sundries. Write today.

Let GALLOWAY Save

Your Wash Day Worries With This Wonderful Hand and Power Washer

No. 1 Washer with Wringer $15

No. 2 Washer complete with Wringer $17.50

Turns drudgery into delight

"Let me Send You my Great WASHER for a 30 Day Home TRIAL."

Don't Be Tied to a Tub!

With the Galloway Washing Outfit shown above you can turn work into play. No more back-breaking, health destroying drudgery now. A ten year old girl can easily run it by hand and quickly handle a big family wash. But the best way is the power combination shown in picture. So simple and easy to operate that you can't go wrong. If you already have an engine all you need is this washer. If you haven't, by all means get my complete outfit. **I'll send it for 30, 60 or even 90 days' free trial. If you decide not to keep it, back it comes at my expense—you won't be out a penny.**

1,000 Other Big Bargains

My Big General Line Catalog shows everything for home, farm and family at actual bed-rock factory prices. Let Galloway save you money! Write for this Complete Buying Guide today. **A postal brings it free.** Don't fail to get your copy.

Combination Prices

If you purchase the Galloway Improved Washer with Engine and Truck as shown in illustration, we will furnish a sufficient amount of **Belt Free** and ship it with the machine. The engine is the regular Galloway and there is nothing on the market to equal it for pumping or running any kind of light machines.

	ENGINE WITH TRUCK		
	1¾ H.P. Air Cooled	1¾ H.P. Water Cooled	2½ H.P. Water Cooled
No. 1 Washer Complete (belt free).....	$49.75	$57.50	$63.50
No. 2 Washer Complete (belt free).....	52.25	60.00	66.00

NOTE—In case you wish the outfit without truck, just deduct from above prices $5.00 if engine is 1¾ h. p. size, or $6.00 if engine is 2½ h. p. size. (321)

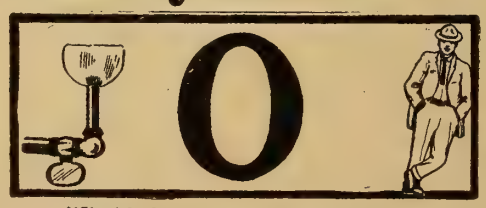
$250 Motorcycle Given Away

Solve This Puzzle



What Does It Mean?

We are going to give away a $250, eight-horse power, Pope Motorcycle and I want to tell you how to get it. The above picture-puzzle represents something that every motorcycle owner uses. What is it? Write me today what the puzzle means. Be sure to send me your name and address so I can tell you all about the contest in which you can win the eight-horsepower motorcycle and many other prizes.

1500 Votes Free—I will send you a special coupon good for 1500 votes toward the motorcycle and a big picture of motorcycle and full description. All you have to do to get this coupon is to send your name and address at once.

POPULAR CO., 501 Popular Bldg., Des Moines, Ia.

When Writing to Advertisers Please Mention The Homestead

plowed it under and drilled it thick to corn, and such a crop of fodder! When it was cut we pulled up every cornstalk stump. The next spring husband plowed, pulverized and harrowed it fine as an ash heap. We marked rows twenty-six inches apart and set the plants twenty-six inches apart in the row, using plenty of water while setting out the plants We used the Senator Dunlap, Jesse Clyde, Bederwood and Lovett. They all were good but the Lovett. They are too soft and tasteless, to our notion. As soon as the plants are set out, commence hoeing. To raise small fruit of any kind it must be kept free from weeds, and especially is this true of strawberries. We put out 800 plants the first year. We had lots of rain and the plants did well. By fall the plants were well matted. The first season we kept all the blossoms pinched off and kept them well hoed; the next three years we realized our reward. By the second spring the plants were so matted that we could not use a hoe to much advantage only along the edges, so I pulled up weeds where I could and used a four-tined steel table fork to weed the strawberry bed from early spring until late—yes, until the ground froze. After the ground is frozen mulch lightly. We made the mistake the first year of using wheat straw for mulch. It took us all summer to get the wheat killed out—twice the work to get rid of the weeds sown by the seed that was in the straw. We used slough and rush hay after that and think it best, but forest leaves are good. Use corn fodder sparingly to hold the leaves on. Do not remove the mulch too early and when you do catch a rainy or cloudy time so the sun will not blister the tender plants. We had all the berries the second year that a family of eight could eat. I canned 104 quarts, also sold $40 worth, and the neighbors had quite a few. On Saturdays we let the neighbors take turns picking. They had all they picked. We had to bake and do the Saturday cleaning, so it was nice for all parties to arrange it that way. The other three years we had more berries than the second.

Such results as Busy Bee secured justify quite a deal of work. Hearing about it should decide any who are still wavering, but in case more stimulus is needed let us lend ourselves to catching a few echoes from Kansas where Mrs. Newton has been telling of what she did with strawberries:

The second week in April I planted a small strawberry bed of 150 plants. The ground, which in the previous year had been used for potatoes, was prepared as for gardening. The plants I set in rows two feet apart and about the same distance in the row. It required several weedings by hand and some thorough hoeing before I was rewarded by the sight of a clean plot. Then came the well-remembered drouth through which I carried water many times to keep life in those plants. I lost only a few. During this time, as runners were forming, they were placed in the direction of the row, leaving room between rows for hoeing. Blossoms were also picked off to preserve the strength of the plants. The latter part of the summer required less work, only placing runners and hoeing to keep a dust mulch. In November I gave the bed a light covering of straw and toward spring I thickened the mulch to protect plants against alternate thawing and freezing. This spring, when plants began to show signs of life, I removed with a fork the mulch from over the plants, leaving a light covering between rows to protect the fruit from the ground. Don't forget that the fruit buds were formed in the autumn and in case of threatened frosts replace some of the mulch to protect the fruit. Old strawberry growers in this locality consider Parker Earle, Clyde and Senator Dunlap as leading varieties for the home garden. It is advisable to plant both, an early and a late variety to give a longer succession of bearing. Nearly all the work of caring for this bed I have done alone and, being an amateur, I have learned many things from the experience it offered. I also feel well repaid for the work by the delicious, fragrant berries we had for use. I am renewing the bed for next season by cutting out the oldest plants with a sharp spade and loosening the ground so that new runners can take root.

Not until every farm home represented in our circle has vegetables and fruits and flowers will I be satisfied that the influence of the Home Department is the power it should be. Others feel the same I am sure. I trust that they will do what they can to hasten the happy day. They are cordially invited to come and tell about the things they are doing along this line—the joy in the labor and the richness of the returns.

A word from Mrs. E. M. now. It is on a topic which is uppermost in the minds of housewives at this season:

The snow is barely gone from the yards and there is mud everywhere, but after the long winter, with big fires, ashes and dust in abundance, one's fingers fairly tingle to get the carpets up. So I am cleaning house and will spread down strips of carpet to protect the cleaned rooms. Under what varied conditions housewives face house cleaning. That word had no terror for me when a girl at home, for mother looked after the meals, father helped with the heavy lifting, cleaned the carpets and rugs, while a hired helper and I did the cleaning and straightening. But it is not of the woman with modern house, ample porches, plenty of help, vacuum cleaners, etc., that I wish to write. It is of her with limited strength who faces, single handed, the task of cleaning an old-fashioned house with its stoves and ingrain and rag carpets. She who papers and refinishes her own walls, woodwork and floors. She, to my mind, is a real heroine. Experience teaches me that following a system is a great aid. I consider the preliminary work very important. If one has previously cleaned all drapery, put in order every drawer, changed the rollers into opposite end of worn window shades (the public will be deceived into thinking they are new shades), then straightening the cleaned rooms is easily accomplished. The question of meals during housecleaning is a big one for the woman with no help. If, the day before the tearing up begins, she will do up baking, include a pot of baked beans, and during the time will make use of boiled dinners, such as the "New England" dinner, she will need to give food little thought for a few days.

Next week we shall perhaps hear how the labors of housecleaning are minimized by the use of modern conveniences, but in any case, as the larger number of women have to get along as their grandmothers did, it is a good thing to hear from women who putting brains into their work rob housecleaning of a good many of its old-time terrors. Another such, "A Business Woman," will talk about her way of doing things. It is a business-like way and one worth copying:

With a twelve-room house to clean and no help to be obtained at any price, I have evolved nine rules that, strictly adhered to, reduced my housecleaning to a science. First. Begin to clean by the middle of March, so as to have it out of way of chickens, garden and cleaning yards. Second. Bake up a supply of bread, doughnuts, cookies and pies the day before you begin to clean. Third. Don't put on an old, tattered dress; have a big apron with sleeves and sweeping cap, and when apron looks soiled put on a clean one and look presentable. Fourth. Begin on cellar first. It is apt to be the most unsanitary part of the house. Sort over apples and potatoes and give little potatoes to pigs and chickens. Do not leave them in the bin sprouting half the summer. Sweep down ceiling, walls and floor, wash windows and whitewash walls. Fifth. Clean pantry next. Wash one shelf at a time and dust or wash each article and put back in place before you commence on the next shelf and save cluttering up. Wash and scald flour bins and leave on back porch for half a day. Sixth. Now begin upstairs, guest chambers first. I light my little oil heater and carry up to the room and work in comfort. Take a large basket containing dustpan, cloths, whisk broom, bottle of turpentine, flat sash brush, tack puller and broom upstairs with you. This is your tool kit. Throw old calendars, cards, letters, boxes, old patterns and hats in basket for bonfire. Wash the closet shelves and all floors with hot water and a tablespoonful of turpentine as a moth preventive. Sweep down ceilings and walls with a pillow case pulled over the broom. The flat paint brush is fine to dust out crevices in furniture and woodwork and to clean corners in windows. Use dustless dust cloths on furniture and woodwork if varnished. If painted wipe off with hot water, one teaspoonful of kerosene oil to each quart of water. Seventh. When I reach the living room we store base burner, clean room and put up a wood stove to remain up all summer. A fire on cold, damp days saves doctor bills.

Eighth. When one room is finished never commence on another room the same day, but rest that evening so you won't get so tired and cross. Ninth. Stop cleaning house Friday night and spend Saturday straightening up living rooms and doing a little extra baking and rest in the afternoon so you will not be too tired to go to church next day.

A few weeks later we shall have something on this subject again.

As the decision of the awarding committee may be expected any time now, the program proposed for next week is the prize essays on labor-saving devices for the home. Accompanying this Among Ourselves program the first installment of a remarkable story entitled "Solidarity" will be given With the Editor. The story has a decided bearing upon the subject of the prize essays. The combination should have an aftermath. Let me urge that the wives and the husbands together take advantage of the Home Department offerings next week if they have never done so before.

Three Wisconsin men, Pres. Charles R. Van Hise, of the University of Wisconsin, George McKerrow, superintendent of Wisconsin Farmers' Institutes, and Edward Webster, noted dairy writer, have been assigned places upon the program of the first national conference on marketing and farm credits, which is to be held in Chicago April 8th to 10th. Professor Van Hise will address one of the first sessions upon "Waste in Distribution." Superintendent McKerrow will preside at one of the educational sessions and Professor Webster will lead the discussion on the "Production and Marketing of Dairy Products."

THE YOUNG FOLKS

Letters and Articles for this Department Should be Addressed to Aunt Mary, Hawley, Minnesota.

MEMORY GEM.

It is a good thing to be rich and a good thing to be strong, but it is a better thing to be beloved of many friends.—Euripides.

SPRING.

Winter has gone and spring has come,
Children are playing out in the sun;
Birds of all kinds are out on the wing,
All celebrating the coming of spring.

Over the hills and the meadows so green
A beautiful carpet of grass is seen;
The flowers are springing here and there,
And a fragrance of sweetness fills the air.

Out in the orchard the birds and the bees
Are flying among the flowers and trees;
Neither has time to idle or play,
Each must work hard till the close of the day.

—Jolly Jack, age 13.

ROLL OF HONOR.

Amethyst, Arrah Wanna, Aunt Mary's Niece, Bedouin, Blue-eyed Darling, Brown-eyed Beauty, Brutus, Carlos, Colorado Cousin, Cricket, Daddy's Girl, Diamond Queen, Dimple, Eyes of Blue, Fairbury, Gabriella, Gem, Golden Girl, Healthy, Io, Jolly Girl, Jolly Jack, Kansan, Kitty, Little Beauty, Lois Irwin, Lucerne, Merry Mack, Morning Glory, Neb. Dascal, Nebraska Nan, Princess Yetive, Riches, Sharlot, Sweet Helen, Sweet Pickle, Thora, Truda, Vernie of Worleytown, Vivian, Washingtonia, Wild Rose, Willamette.

The foregoing names are given places on the Roll of Honor for good, original literary work written on one side of the paper and properly signed, or for handwork made by the young folks.

Pansy badges are won (for three times on the Roll of Honor) by Carnation, Fairy Queen, Nebraska Farmer, Sweet Pickle and Wanola. Silver badges are won (for three more times after winning pansy badge) by Marjorie and Peggy.

No credit is given the following: De Pera, Forget-me-not, selections; Alta Loyd, Country Lassie, no general interest; Kansas Clodhopper, Kansas Dishwasher, no name; Easter Lily, riddles.

CHILDREN AND THEIR PETS.

I am a little Shetland pony. When I was born I lived in town and belonged to a horse doctor. I liked that home very much. After awhile I was sold, and had to leave my mother. I didn't like that. I soon was taken to a farm. A little girl came and petted me. I was glad to see her and she was glad to see me, and we were soon friends. I like my home very much now.—Neb. Rascal, age 8.

One day last summer I was going to the field and my dog went with me. After I got there she jumped over the fence and found a snake six feet long. I ran to the house and papa came and killed the snake. My dog was so proud that she ran around and barked. —Dap.

Once my papa gave me a little lamb, and I raised it for a pet. It would play with me, run races and follow me everywhere I went. When school began in the autumn I had to put my lamb in a pen until I was gone to school and then mama would go and let it out to play.—Little Nell, age 10.

A Winter Walk.

These sunny wintery days are surely ideal and acting upon Vashi's suggestion I shall tell of my cross-country walk, though not taken alone, but with the companionship of a friend, who is all that can be desired for a real companion.

It was a cloudy day and a breath of snow hung in the air, but we had been in the house for a number of days and as the snow was very deep we decided to try our snowshoes. There were several pairs in the attic covered with dust, but finally matching up two pairs in fairly good condition we put on our heavy mackinaws and skating caps and armed with two poles which had before this been broomsticks, set forth across the fields.

Before the first half mile was reached we were confronted by a net wire fence and no way of getting over it. Much valuable time, I am afraid, was spent in that rather than in action, but finally following the fence a short distance we came to a woodland lot and luckily a tall stump grew close to the fence, so we mounted that and then to the top and over.

Thus on through fields and woody spots where great flocks of bluejays held querulous meetings, where red squirrels peeped at us from leafless branches and tiny chickadees called. We had perhaps gone about two miles when we came to someone's back yard and by many methods finally found a way through the various fences and around the sheds to the house. The people living there had just recently moved in, but they greeted us kindly and as soon as we had crossed the threshold we knew we were in the midst of a happy home. Three little children were flocked around a white-haired old lady who was relating to them the old, old story of "Little Red Riding Hood."

We found later that the dear old lady was an invalid and these little ones were the joy of her heart. We had a lovely visit with them all and feasted on apples and dandy big doughnuts. Finally we started home. The air was full of soft, large, flakes, softly stealing down from the gray sky. When we had gone a short way my friend put out her hand and said, "Oh, beautiful, beautiful powdery snow, covering all unlovely things here below," and then turned to me and said, "Just so do kind deeds and words fall and, girl, I believe like the snow come from heaven to help us on and on and lead us to higher things." All through the walk home these words sang in my heart, for I knew they were true and it made me feel happier and better than before.

Get out in God's open and see the great wonders of nature and by training your mind to comprehensive feeling it is bound to make you happier for so doing.—Bedouin.

Molly's Reverie.

"Molly! Molly! what did you do that for?" cried her mother as Molly emptied the dishwater on a little kitten who was wanting to be fed.

"That naughty cat has been under my feet all day. I'll teach him to get in my way all the time," Molly angrily replied as she went into the kitchen and slammed the door.

Her mother picked up the kitten which was mewing piteously and wrapped it in an old coat and took it into the house by the fire.

When she looked out of the window she saw her daughter walking slowly across the field with a book in her hand. Molly's book was not as interesting as it had been before when she had helped her mother with willing hands. From every page her mother's sorrowful, dark eyes seemed to be looking reproachfully at her.

She pulled her stocking cap farther over her curly head and buttoned her coat more closely about her and sat down by a tree in the bright sunshine.

She was wishing she had not spoken so disrespectfully to her kind mother when she heard some one coming. She sprang to her feet and looked behind her and there stood a beautiful fairy. What a cheerful innocent face she had and what long, golden wavy hair and delicate pink dress. She bowed her graceful head and said in a musical voice, "I am Spring." Molly was so surprised that she did not say a word. Little Spring said, "Come, let us take a walk this beautiful afternoon."

They started through the naked woods together when Mr. North Wind, seeing them, thought he would walk with them, but when he came near, Molly began to shiver. Fairy Spring seeing this, said, "Mr. North Wind, it is time for you to go to your home in the North and South Wind may take your throne. He went away blustering and whirling the leaves as he passed. South Wind came floating through the cloudless skies bringing the song birds in his chariot. As Spring and her companion passed under the bare branches of the trees, she sang

Little leaves, throw off your blankets of brown,
That are coarse on the outside and lined with down;
The north wind has gone.
And the south wind is here;
The birdies have come
This country to cheer.

The little leaves threw off their blankets and came into the sunshine with their fresh, green robes. They went farther into the woods and Spring sang in the same magic voice:

Little daisies, put on your dresses of white,
And come from your dark homes into the light.
Johnnie-jump-up,
You, too, must awake,
And see how much pleasure
Your coming will make.
All flowers that are little
And flowers that are tall,
Come into the sunshine,
Come one and all.

The flowers all came out, clad in gay colored dresses and nestled in the green grass which had also come out to hear what Spring was saying.

Molly and Spring had now reached a little brook, which was covered with a little layer of ice. Spring placed her dainty foot on the ice and it dissappeared at once. The frogs even came out of their muddy homes and began to croak. Molly looked at the fairy's work with wonder. "How could anyone be so cheerful who had so much to do?" was her first thought. Then suddenly it came to her how much better it would be if she, too, would do her work cheerfully and gladly.

When they returned to the edge of the forest Fairy Spring said, "You must go back to your home now, but before you go I will grant you one wish." Molly hesitated awhile, then she said in an earnest voice, "I wish that I might always be as contented and as ready to make people happy as these flowers and birds are."

"Your wish is granted," Fairy Spring said, as she kissed Molly's hand and dissappeared. But no! instead of the fairy's kiss, it was her father's warm kiss that awakened her. As he was coming home from his work he saw a little figure leaning against a tree. When he came nearer he saw it was his own little girl. He lifted her in his arms and as he kissed her she awoke.

On their way home she told him what a cross little girl she had been and how she had gone away to read, leaving mother all the work to do. Then she told him of her dream, and how she meant always to keep her wish. She never was such a cross little girl again because her wish had been granted, even though it was but a dream.—Morning Glory, age 15.

HOW TO KEEP MILK GOOD.

Place milk in refrigerator as soon as possible, next to the ice if convenient.

Keep cold until ready for use. If ice cannot be obtained, wrap bottle in wet cloth and stand in dish of water by open window out of sun. Evaporation of water will cool the milk.

Keep covered in bottle until wanted. Milk in open bowls and pitchers absorbs odors and collects flies and dust.

Pour from bottle only what is needed for immediate use.

Never pour milk that has become warm back into a bottle of cold milk.

Wash and return all bottles daily.

Do not leave milk, cream or butter standing around on the kitchen table.

Put nothing in bottles once empty. Sterilization will not kill all odors.

Have a separate quart of milk for the baby. What it does not use others may have.

In mixing the baby's food do not add a warm fluid to the milk until you are ready to give it to the baby.—[Milk precautions urged on housewives by the medical milk commission of the Jackson (Mo.) County Medical Society.

A valuable Free Book on CLOVER

A gold mine of information

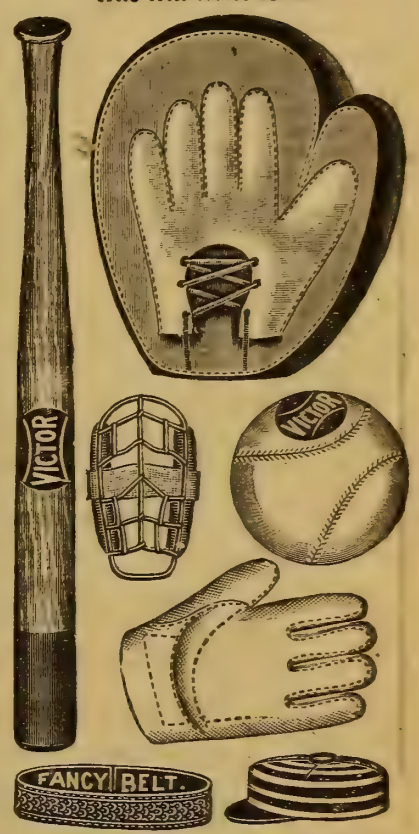
We have just published a wonderful new book entitled "Clover, the Great \$Cash\$Money Crop\$." This book is truly a most remarkable source of information on the subject of clover raising. For the first time the opinions and experiences of the world's greatest clover authorities and practical growers have been gathered together in printed form. Every question you can think of is fully answered. It tells you how to get a sure "catch" first planting; how to keep clover in the rotation; about clover as a soil enricher; how to handle the crop for hay and seed production; how to grow clover that makes richer feed—that produces more beef and more milk—that puts immediate cash money in your pocket. It explains the cause of clover failures; how to avoid winter killing; how to prevent ground heaving; how to guard against the loss from heat and drought; it tells all about the causes of "clover sickness" and how to deal with it. These and hundreds of other questions are answered, covering sixteen clover varieties, including Red, Mammoth, Crimson, Alsike, Sweet, White, Yellow, Japan, Berseen, Burr, Serradilla, etc.

This book is a gold mine of information to the farmer who is looking for bigger and better results. Ordinarily this book is sold for 35 cents per copy, but for a short time we will mail a free copy, postage prepaid, to the readers of this paper, or until a certain number have been distributed. If you will write at once you will be sure of getting a copy by return mail.

GALLOWAY BROS.-BOWMAN CO., BOX 108 M WATERLOO, IA

Free To Boys

I Have a Glove, Mitt, Mask, Ball, Bat, Cap and Belt for Every Boy Who Will Write to Me.



There are seven splendid pieces in this great outfit. The ash bat is a good one. The mask is made of heavy wire, full size. The catcher's mitt is thickly padded, very heavy and has patented fastener. The glove is of tanned leather and has patent clasp. The ball is strongly stitched and will last. A neat, adjustable belt and a dandy cap complete this great outfit. Remember you get the whole outfit of seven pieces for a little easy work. Write me today and I will tell you just how to get it.

A. M. PIPER, 304 Popular Building, Des Moines, Iowa.

Fine Prize Pony Given Away

You see in this picture a boy riding one of the splendid prize ponies I am going to give away. In other parts of the picture are the faces of several other boys. They are rather hard to find, but by turning the picture about you can see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send your name and address so I can tell you all about the contest in which you can win a beautiful pony and many other prizes.

1500 Votes Free

I will send you a special coupon good for 1500 votes toward the pony. All you have to do to get this coupon is to send your name and address at once.

A. M. Piper, 600 Popular Bldg, Des Moines, Ia.

PLEASANT FIELDS OF HOLY WRIT

SAVE for my daily range
Among the pleasant fields of Holy Writ

The International Sunday School Lesson

FIRST QUARTER. LESSON XIII. March 30, 1913

THE GOD OF OUR FATHERS: REVIEW.

Our fathers trusted in Thee:
They trusted, and Thou didst deliver them.—Psalm.

The concession is almost universal among competent authorities that the book of Genesis was not written in its present form by Moses, or indeed by any one person. The documentary hypothesis wins its way. It affirms that fragments of still more ancient literature were woven into the text as we have it, and that the process may not have been completed until as late a date as the time of Ezra and Nehemiah. A child will readily discover the "doublets" of Genesis; viz., the two accounts of creation and the flood, and the two names of deity. Confusion results unless some reason is given. The natural explanation, which would be accepted without objection in the case of other literature, is that of the interweaving of ancient documents. This is no late and crude theory. It seems to have been first suggested by the devout, scholarly French priest, Simon, 220 years ago. Since then it has been worked out with infinite pains to the minutest detail by scholars of every nationality and creed. Again it is affirmed that Genesis is not a transcript of actual history, but that the "origin of man," "paradise," and "the flood" reached Israel in traditional form from other nations, and became the folklore of Canaan. In thus preserving these ancient traditions, the editor of Genesis "created a genuine archaeology." But while Genesis may thus have appropriated certain elements of an elder literature, it presents several remarkable lines of cleavage from the Bibles of the Tigris and the Nile. It differentiates itself; it stands solitary. The first sharp line of cleavage is the absence of the slightest tinge of racial bigotry. While "national narrowness" is almost a characteristic of other sacred books, Genesis deals with the universal man—and is so true to this ideal that it deserves the noble title George Adam Smith gives it when he calls it the "Epic of Humanity." A second line of cleavage is its splendid optimism. The trend of other sacred literature is toward pessimism. They dote on the decline of the race, the drop from gold to iron, and hopes of return to the Golden Age are scant. But Genesis shows an uplift. In spite of occasional lapses, it pictures the plane of humanity in the ultimate analysis to be an ascending one, an evolution of morality and spirituality. The third line of cleavage is most remarkable of all. It finds expression in a single word—monotheism. Whatever elements Genesis may appropriate from tradition and literature, it sloughs off pantheism and polytheism. The unity and spirituality of God burst out of its pages like a sunrise, before which all darkness takes its flight. That is the divinity and inspiration of Genesis! Before it critical questions of authorship and relative antiquity seem comparatively insignificant. Whatever theories and hypotheses may maintain or fail, Genesis cannot lose its place as the "Epic of Humanity."

The Teacher's Lantern.

The Mosaic account of creation is a miracle in words. Not to this present, highly cultured age, but back 3,000 years to the beginnings of literature must we look for the most satisfactory statement of the origin of things. There, through the mists of human speculations, through rising and falling systems of philosophy, Genesis shines like a star, ever ascendant. It is not attached to any system of geology, astronomy, or biology; so, as numbers of these in succession have sunk, it has never been submerged. The book may clash with an hypothesis, it never does with a fact. The narrative is elastic enough to take in all the modern discoveries of physical science, but presents a rim of steel to the vagaries of sciolists. Not Adam and Eve alone, but every human being can be shown to be standing under a tree of test. Destiny is deciding now by one's attitude toward God. The chances of a happy outcome are better and worse than those of Adam. Worse because of an hereditary predisposition to a wrong choice. Better, because of the provisions of mercy. Where sin abounds, grace much more abounds. Even now God's voice is ringing, "Son! daughter! give me thine heart!" One does not need to run the whole gamut of sin to be lost. Merely declining to obey God is enough to exclude one from his presence. This paragraph rivets attention; it is so scenic. It fairly teaches itself. The natural method is followed. It describes the condition of the race before the flood; the superlative wickedness which made that wholesale destruction an act of mercy as well as justice; how the irretrievable misery of the human family, which had doomed itself, was cut short, and a chance given to begin anew under happier auspices. The genesis of anything always has a peculiar fascination. We never tire of origins. This ancient writing brings us to the fountain-head of the most important racial stream that has ever coursed its way through history; a stream to whose bosom the oracles of God were committed for twenty centuries; a stream that bore to earth the infant Messiah, as his type once floated on the Nile. A bird's-eye view of the winding of this stream, and the possible important function it may perform in the future of the Kingdom of God will prove an attractive introduction to the lesson. In the incident of Lot, Abraham's character shines resplendent. Two thousand years before Christ he showed the Christian spirit when he said to his nephew, "Let there be no strife between me and thee and between my herdsmen and thy herdsmen; for we be brethren." Nor are these mere words. Abraham backs them up. He waives his right. The land was his. It was all his. Yet in noble magnanimity he said to Lot: "Is not the whole land before thee? Separate thyself, I pray thee, from me. If thou wilt take the left hand, then I will go to the right; or if thou depart to the right hand, then I will go to the left." Lot's selfishness crops out. He took advantage of Abraham's generosity. He cast his eye on the well-watered plain of Jordan, and chose it. He journeyed east. It was not long before he exchanged pastoral life for urban. He attempted the impossible. A double service—God and riches—met the inveterate and historic outcome.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

3519 Lady's Dressing Sack.—This garment is one of the most useful, as it is entirely plain, except for a few gathers at the neck in the center of the front. Challis, cashmere or cotton crepe can be used to make this sack.

The pattern, No. 3519, is cut in sizes 32 to 44 inches bust measure. Medium size requires 3¾ yards of 27-inch material. Price of pattern, ten cents.

5949 Lady's Middy Dress.—This is the nicest type of the fashionable middy dress and is one particularly easy to develop. The garment closes at the left side of the front and has the blouse joined to a six-gored skirt. White serge can be used to good advantage.

The pattern, No. 5949, is cut in sizes 32 to 40 inches bust measure. Medium size requires 5⅝ yards of 36-inch material. Price of pattern, ten cents.

3117 Boy's Shirt Blouse.—This practical shirt blouse is made entirely plain with back yoke and removable turn-down collar. It is a good, sensible style and one that can be easily laundered. Madras or linen can be used to make this blouse.

The pattern, No. 3117, is cut in sizes 4 to 16 years. Medium size requires 1¾ yards of 36-inch material. Price of pattern, ten cents.

5701 Lady's Four-Piece Skirt.—This skirt can be used to complete a coat suit or it can be worn with separate shirt waists. It is cut in four pieces and is made with the empire waist line. Serge or cheviot can be used to make this skirt.

The pattern, No. 5701, is cut in sizes 22 to 30 inches bust measure. Medium size requires 3⅞ yards of 36-inch material. Price of pattern, ten cents.

5519 Lady's Norfolk Waist.—The Norfolk waist is appropriate for all seasons of the year. This waist closes at the front. Linen or serge can be used to make this waist, with the collar and cuffs of contrasting material.

The pattern, No. 5519, is cut in sizes 32 to 42 inches bust measure. Medium size requires 4⅜ yards of 36-inch material, with ¾ yard of 27-inch contrasting goods. Price of pattern, ten cents.

$1.90 FOR THIS DANDY GATE

These gates are not a special lot built down to a low price, but are full of the same quality, satisfaction and durability which can be obtained in any of our **triple-galvanized, high-carbon steel**

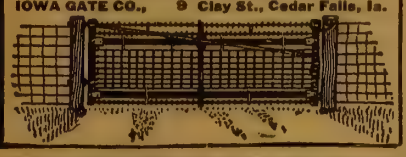
Iowa Gates

The filling of this serviceable and ornamental gate is extra close diamond mesh. Gate has strong frame, patent latch, etc. Comes in all sizes; plain and fancy tops.

Style E Farm Gate, illustrated below, is another leader sold at a much lower price than asked for other gates of its kind. Painted or galvanized. All sizes.

The best lumber dealer in your town has these gates on sale. If you don't know his name, write us for booklet, name of dealer, special prices, etc.

IOWA GATE CO., 9 Clay St., Cedar Falls, Ia.



PEERLESS

SELF-RAISING GATES.

Make All Your Fields Pig Tight

No matter how good your fence, unless you have gates to match, pigs and other small animals go through, losing forage—profit—you might just as well have.

With Peerless Gates and Fencing you get the last dollar of crop value. The self-raising gate is heavy enough to turn large animals and close enough to turn small pigs.

GALVANIZED throughout, are rust-proof, last longer and look better than painted gates.

Described in our complete fence and gate catalogue.

THE LIVE STOCK MARKET.

Chicago, Ill., March 22, 1913.—Cattle trade is on anything but stable basis. The consumer is balking and he has a convincing method of doing so by curtailing purchases. On runs that would have been regarded as meager a few years ago prices have failed to hold and killers have been indifferent. A few steers are selling above $9, but the proportion above $8.75 is small and a spread of $8.15 to $8.65 is taking the bulk. Not to exceed 5 per cent of the total crop is selling above $8.75 and the few cattle killers are getting below $8 are either crooked or only thinly covered with beef. Declines for the week are 15 to 25 cents and the market is on insecure footing at that. Heavy cattle are losing what little popularity they enjoyed all winter and demand is centering emphatically on 1,100 to 1,300-pound bullocks, which are scheduled to hold the premium as temperatures rise. A suspicion exists that feeders have more than enough big cattle to go around, this condition being usual when the country is as full of feed as during the past winter. Nobody in the trade is predicting much lower prices, but beef is now costing around 12½ cents in the carcass, on the hooks, and after the distribution has levied his toll and the retailer has taxed his clients every cent the traffic will bear the burden of the consumer is not calculated to lead to extravagance in the use of beef. Butcher cattle are relatively scarce and that market is charting a course independent of steer trade, but it is a very uneven market and even active traders are somewhat hazy in their ideas of values. Cow beef is wanted and speculation is usually a strong factor in making prices. A few choice heifers are selling up to $8.75, but $5.50 to $7.75 is the range at which the bulk of cows and heifers cross the scales. Bulls are the scarcest article purveyed at the stock yards, bologna material selling as high as $6.75. The crop of bulls in the country has been closely garnered and sausage makers are experiencing trouble securing "filler." Veals had a $1 break this week, but the market appears to be healthy on that basis, a 25-cent reaction being prompt, choice veals selling at $11 to $11.35. The big Wisconsin run has not yet set in, but high cost of pork and mutton warrants expectancy of a good market for veals.

Stocker and feeder trade is badly out of joint with the fat cattle market. Dealers are not advising investment at current prices, but the country is purchasing, regardless of cost, a lot of unfinished cattle going into finishers' hands at $7.50 to $8, with choice feeders up to $8.25. In the Southwest a burning furore is on. Cow stuff is commanding anywhere from $40 to $60 per head down in Texas and little, runty Mexican cows are selling freely at $25 to $30. Extensive transactions in yearlings at $30 and aged cattle at $50 to $60 are reported, two-year-old steers making $50 for July delivery. Considerable eastern demand for stockers has developed recently. Some Ontario light stuff is going through Buffalo to Ohio and Pennsylvania points and scarcity reports continue to roll in from all points of the compass.

STEERS.

Prime steers, 1,350-1,700 lbs.	$9.00@9.20

Good to choice stock calves	7.00@7.65
Inferior to fair hvy. calves	4.75@6.25
Good to ch. heavy calves.	6.50@7.75

HOGS.

After reaching the highest level of the year, when the bulk sold at $9 to $9.15, with a $9.25 top, hog values have reacted slightly, due to decrease in eastern demand, to which influence the market is very susceptible. At the low spot of the week the top was $9.10 and $8.85 to $9 bought the bulk, but the close of the week showed a 10-cent advance from that basis. Quality continues good, although some soft-killing southern hogs of the nutcracker variety are showing up, selling at $7 to $8. Light weights have the call, shipping orders calling for weights of 200 pounds or less and considerable sorting is necessary to make up these packages. The run is carrying a large proportion of 240 to 280-pound hogs and a decided paucity of pigs. The winter packing season is over without any accumulation in packers' cellars and distributors will be on a hand-to-mouth basis all summer. Export trade is of fair volume, considering cost, and the South is a heavy buyer of product, while fresh meat trade is of unprecedented volume measured by supply, and while at current high levels bullish opinion is by no means noisy, present prices are believed to be legitimate and no sharp decline is expected. Eastern hogs will not run freely until well along in May and shipping demand here from that source will be urgent for several weeks to come. The provision pit and hog market have not been on speaking terms for some time past. Hogs are costing close to 9 cents, while May and July product is one an 8¼-cent basis, which warrants expectancy that buyers of futures will be attracted into the market on declines. Supply at Omaha and Sioux City is running much lighter than last year, indicating that herds in that territory have been ravaged by disease.

SHEEP.

Live mutton trade has been somewhat erratic and uneven. The 9-cent lamb has taken the count and most of last week $8.85 was the limit on the best Colorados, with the bulk between that figure and $8.50. It is mainly a run of Colorado lambs and minus the crop from that source killers would be in a bad way. Prices are on a lofty basis and shipping demand is the sole support of the list. When eastern orders fall down packers speedily dictate terms to the selling side. Yearlings are scarce and selling up to $8.25, while choice wethers are quotable to $7, but that kind is in a class by itself and few sheep are crossing $6.80, with a lot of fed stuff from Montana around $6.50. A few ewes have sold up to $6.90, but $6 to $6.50 takes the bulk of ewes. Killers discriminate against weight and light stuff monopolizes popularity.

Lambs, g'd to prime handy..	$8.60@8.90
Lambs, good to prime hvy.	8.00@8.60
Lambs, fair to good natives	8.25@8.65
Lambs, common to fair light	8.00@8.25
Lambs, culls	6.75@8.00
Wethers, good to prime....	6.60@7.00
Yearlings, fair to ch. handy	7.50@8.25
Yearlings, fair to ch. heavy	7.15@7.75
Ewes, fair to best handy...	6.25@6.85
Ewes, culls	4.25@5.00
Bucks	4.50@5.50
Lambs, feeders and shearers	7.50@8.35
Wethers, feeders	5.50@6.25

The hookworm commission is doing splendid work in Texas, writes Dr. Bell C. Eskridge. This commission was made possible by a gift of $1,000,000 from John D. Rockefeller, to be handled by a board of trustees and to be given to the health boards of the states that might make application. Investigation in each state is under the supervision of the state board of health.

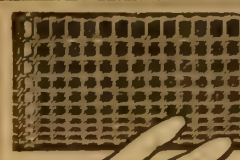
ADVANCE FENCE CO., 160 No. State St., Elgin, Ill.



Answer These 3 Questions First

before you buy a rod of fence.

KIND OF WIRE? You want a wire that is **springy,** but not **brittle.** We make the wire for Square Deal Fence in our own wire mills right next to our fence factory. We make it hard enough to be **springy,** but not **brittle**—then we galvanize it heavily and evenly.

SIZE OF WIRE? Be careful about the comparative size and weight of the stay and strand wires. Compare

SQUARE DEAL FENCE

with any other strand for strand, stay for stay, and see why fencing we made 22 years ago is still giving good service.

HOW IS IT WOVEN? See the **Square Deal Lock**—"the knot with a grip that will not slip." See the wavy strand wires that spring Square Deal fencing back into place after sudden heavy strains and keep it tight and trim the whole year round. See the one-piece stay wires that prevent sagging, bagging and buckling to let the pigs under—requires fewer posts, saving money, time and labor.

Get Square Deal Prices Before You Buy

We'll send you our latest fence catalog, price list, local dealer's name and a high grade, four-section, 2 ft. folding rule, all **FREE.** A postal will do.

Keystone Steel & Wire Co.
406 Industrial Street (6)

NEWS OF THE SALE RING

The Waterloo Holstein Sale.

The sale of Holstein-Friesian cattle held at Waterloo, Iowa, on March 18th and 19th, under the management of the Iowa Holstein Breeders' Company, was very successful and the management is to be complimented on the outcome of the sale. The average of $269 made on 110 head must be very gratifying to every breeder of Holsteins. It indicates a strong demand for good cattle of this breed. R. B. Young, Buffalo Center, Ia., sold an exceptionally high-class lot of cattle and Buffalo Caroline, of his consignment, a beautiful two-year-old heifer with an excellent record, topped the sale at $530, selling to David Coleman. Colonel Perry sold the offering in a highly satisfactory manner. A list of sales is appended:

The Anstey Hereford Sale.

One of the largest crowds that has been seen at a Hereford sale in South Omaha in recent years was in attendance at the sale of George J. Anstey, Massena, Iowa, on March 18th, when he sold fifty-two head at an average of $147. Twenty-five head of females averaged $183.20, the top being the splendid cow, Emme, a daughter of Beau of Shadeland 10th, that went to J. P. Saunders at $350. Mr. Anstey had originally intended selling in April or May and in consequence his cattle were not in high flesh, but everything that he sold was a good bargain for the man that bought. Col. Fred Reppert cried the sale, assisted by Colonel Cruise, Massena, Iowa, in the ring, and both did good work. Below we list those selling for $100 and over:

Yours Is the Work That Counts

YOUR season's work means a great deal to you. After you have fertilized your soil, plowed, harrowed and perhaps rolled it, planted your seed in the carefully prepared seed bed, tended the growing crops and watched the grain ripen, you have a right to a full harvest. You can be sure of a 100 per cent return from your fields when you use efficient modern machines for your farm work. You would certainly be taking an unwise and unnecessary chance if you bought a machine that might not do your work as it should be done. To be on the safe side, buy I H C harvesting and haying machines and tools, all of which have proved their reliability through years of experience with harvesting and haying conditions on farms in every part of this country. These dependable machines may be identified by the following well-known names:

Champion Deering
McCormick Milwaukee
Osborne Plano

There is no better time than the present to investigate and decide which machine is the best for you to buy. The opinion of your neighbors is valuable, and should help you to come to the right decision. All of the machines are so simple that they may be handled by ordinary farm help. They are so efficient that there is no question of their capacity for cutting, binding, and saving all the grain in any field, whether it be heavy or light, tall or short, standing, down, or tangled. The haying machines are as efficient as the harvesting machines. When you buy an I H C machine you do away with any chance for unreasonable delay at harvest time. Should anything happen to your machine, it is possible, no matter where you may be, for you to obtain repairs in a few hours' time. Our efficient organization, which includes nearly a hundred general agencies carrying complete stocks of repairs, and over thirty thousand local dealers who carry repairs for the machines they handle, is the most practical guarantee you can have that your grain will be cut and bound at the proper time, and without delay and annoyance.

To secure the best results from these good machines, it is necessary to use a strong, smooth binder twine of reliable quality. I H C binder twine is made under seven brand names—Champion, Deering, McCormick, Milwaukee, Osborne, Plano, International, each in four grades—pure manila, manila, sisal, and standard. Each ball of twine marked with any of these names is guaranteed for length, strength and uniformity of size and quality.

Yours is the work that counts. Make sure that it is done as it should be done by seeing the I H C local dealer and buying from him the I H C harvesting and haying machines, tools, and binder twine that you will need for this harvest. He will supply you with catalogues and full information, or, write

The Clark Hereford Sale.

The sale of R. P. Clark at Brayton, Iowa, on March 21st, encountered the worst storm of the season and notwithstanding he had a splendid crowd of buyers and sold forty-four head of cattle at an average of $140. The females made an average of $165.75 and the bulls $110.57. The top of the sale was Nell Gwyn and Petunia 20th, the former going to P. Gorman, Dougherty, Iowa, and the latter to Ben Broughton, Lake View, Iowa, at $310 each. The herd bull, Gay Donald 12th, went to E. E. Homewood, Thayer, Iowa, at $200 and he was one of the decided bargains of the sale. Colonels Reppert and Kraschel did the selling and handled the sale in splendid shape. Below we list those selling for $100 and above:

BULLS.

De Kalb's Great Hampshire Sale.

The greatest sale of Hampshires that has ever been held was that of H. D. De Kalb at Council Bluffs, Iowa, on March 12th, when he sold forty-eight head at an average of $198. This not only beats all previous records, but is $40 higher than any Hampshire sale has ever brought before. It was an offering that was strictly high class and the outcome speaks well for Mr. De Kalb and his herd. The top of the sale was the great sow, Jennie Aylor 6th, a daughter of his well-known boar, Major, and she was secured by the Sal Tone Stock Farm, Greensburg, Ind., at $460, which is the highest price ever paid for a Hampshire sow. She belongs to the celebrated Aylor family that has done so much for Mr. De Kalb's herd and the Hampshire breed. Cols. N. G. Kraschel and H. S. Duncan did the selling and they certainly did a good job of it. Below is a list of the tops:

1. S. C. Bennefield, Leon, Iowa...$205
2. Sal Tone Stock Farm, Greensburg, Ind. 200
3. R. E. Fisher, Winside, Neb... 230
4. Dan S. Zayer, Peoria, Ill..... 150

The Hager Hereford Sale.

One of the largest and best crowds seen at a Hereford sale this spring was present at the A. F. Hager sale at Avoca, Iowa, on March 20th, and he disposed of fifty head at an average of $167.50. The top was Beau Charm 2d, a two-year-old bull, and he went to Thomas Mortimer, Madison, Neb., at $460. He also bought the two herd bulls, St. Elmo R. and Clearmont Lad, at $255, and he certainly got two great bargains in these two herd bulls. He also was a good buyer of young bulls. The top of the females was Lillie 8th, a daughter of St. Elmo R., and she went to Ben Broughton at $350. Mr. Broughton also secured some of the other best females in the sale, as did also A. Spooner & Son, Mondamin, Ia. The outcome of this sale was very satisfactory to Mr. Hager and those attending got some good bargains. Colonels Kraschel and Reppert cried the sale and both did good work. Below we list the entire offering:

Smith & Son's Short-horn Sale.

A nice gathering of farmers and a splendid attendance of breeders from a distance were in evidence at the Short-horn cattle sale made by H. Smith & Son, Tobias, Neb., on March 18th. A very disagreeable day was encountered, a fierce gale was blowing and the muddy roads made travel difficult. The cattle were only presented in fair flesh and more condition would certainly have resulted in higher prices. A very nice sale was made, however, and a nice lot of stuff was sold. Wm. Fagan & Sons, Abbott, Neb., and G. W. Shane, Fairbury, Neb., were the chief supports of the auction. T. E. Trobough, Fairfield, Neb., was also a strong competitor for the good ones and topped the sale. Col. H. S. Duncan did the selling, being employed in the stead of the late Geo. P. Bellows. Colonel Duncan paid a glowing tribute to his great friend. It so clearly conveys the heartfelt admiration Colonel Duncan entertained for his departed friends, which is also shared by all who knew Colonel Bellows and is of such exquisite beauty that we wish to reproduce the same. His words follow: "I have been called here in the absence of a friend to do as best I may the work first assigned him. A man who was a friend to all, yet to me more than a friend. He was as a brother, whose counsel oft I have sought, and to whose unerring advice I owe much. The countless thousands who have felt the magnetic and beneficial influence of his kind, generous and noble presence are stunned and saddened. The Short-horn breed has lost its most able exponent of all ages. American agriculture has suffered the loss of a most efficient and loyal advocate. The nation has been deprived of a perfect citizen. But yesterday he was with us, radiant with task, with cheer, with truth. Today he sleeps. The voice we loved so well to hear is silent. The hand we clasped so oft is stilled. Though only the beautiful example of his life remains, may we strive to mold ourselves to the high standard of service and character he so perfectly exemplified. With firm belief that our friend has gone to receive a greater reward than man has power to bestow, let us look up and address Geo. P. Bellows in the words of the poet:

"Thy day has come, not gone;
Thy sun has risen, not set;
Thy life is now beyond
The reach of death, or change,
Not ended, but begun;
O noble soul, O gentle heart, hail and farewell.

While the writer of this sale report also feels deeply the loss of his great friend, Colonel Bellows, yet we rejoice that American agriculture, the pure-bred stock-breeding industry and a nation is spared so able an exponent and so beautiful a citizen as Col. H. S. Duncan. The report of the sale follows:

They are now talking of fruit storage in New Zealand. The magazine published by the department of agriculture in that country, in its November number, contains an article declaring that the rapid growth of the orchard industry has caused attention to be directed to the necessity of the cool storage at or near the orchard as well as in the center of the population. The total area of orchard is given at 55,957 acres, an increase of 7,413 acres in three years.

MONITOR DOUBLE DISC DRILL
Increases the Yield
Raises the Grade
Saves 20% of the Seed

Hundreds of farmers have carefully tested out the MONITOR DOUBLE DISC DRILL and in every case have found that it increases the yield, usually from three to seven bushels to the acre—raises the grade and saves at least 20% of the seed. It will actually save its cost in a single season.

THE MONITOR WAY IS THE ONLY RIGHT WAY

It deposits the seed on the downward turn of the disc—at the bottom of the furrow—in two rows, one inch apart and covers it with moist soil and not dry top earth as is done by other drills.

Owing to its uniform depth the seed all comes up at the same time—ripens evenly, insuring better grade—increased yield with less seed—it pays for itself.

The MONITOR DRILL cannot be clogged in any soil, mud, gumbo or in weedy or cornstalk ground, and its draft is one-third lighter than any other.

Our FREE Illustrated Book on Monitor Drills will interest you. Write for it today.
The Flying Dutchman Dealer in your neighborhood sells Monitor Drills. Look him up.

160-ACRE FARMS IN WESTERN CANADA FREE

Do you desire to get a Free Homestead of 160 Acres of that well known Wheat Land? The area is becoming more limited but no less valuable.

New Districts have recently been opened up for settlement, and into these railroads are now being built. The day will soon come when there will be no Free Homesteading land left.

A Swift Current, Saskatchewan farmer writes:—"I came here on my homestead, March, 1906, with about $1000 worth of horses and machinery, and just $35 in cash. Today I have 900 acres of wheat, 300 acres of oats, and 50 acres of flax." Not bad for six years, but only an instance of what may be done in Western Canada, in Manitoba, Saskatchewan or Alberta.

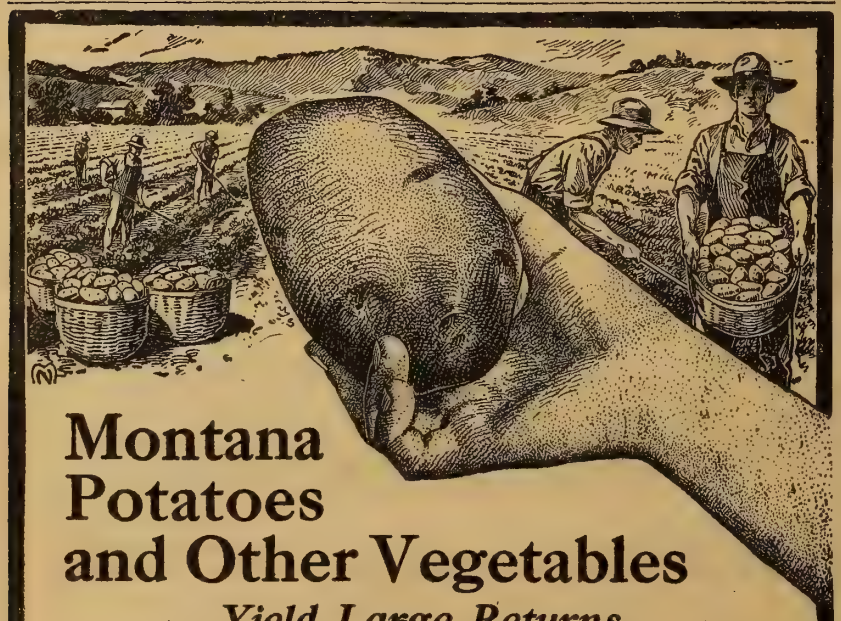
Modern Residence

A GOOD eight-room modern residence, barn, chicken house and large lot, one block from college campus. For sale or exchange for Short-horns or Percheron mares. Address C. F. Curtis, Ames, Ia.

FOR SALE—Deeded land and desert and homestead entries, well improved and under a good ditch. Write for further information to WILLIAM TEW, STERLING, COLORADO.



Montana Potatoes and Other Vegetables

Yield Large Returns

W. W. Sleight, of Willow Creek, Mont., writes: "About four years ago I took up a homestead of 160 acres. I had in crop last year 10 acres of potatoes and raised over 6,000 bushels. I had also all kinds of garden truck. I took up this land for nothing and land on which you can raise 600 bushels of potatoes to the acre and get 60c a bushel you can soon figure up how it has increased in value."

The following from J. A. Siffert, Three Forks, Mont.. "Am sending you a box of potatoes from Con Lane's farm near here. He has a little less than two acres and has 450 sacks. There are about two bushels in each sack."

These Are Not Unusual Instances

They are the rule, *not* the exception. What these and their men have done you can do. Make a new start *now*. Take up a government homestead under the new three year homestead act. There are millions of acres of land that can be homesteaded and millions of acres that can be bought at $15 to $45 per acre.

SECURING AND MAINTAINING A HIGH-CLASS DAIRY HERD.

To the Editor of The Homestead:

How a high average may be obtained and once obtained held is a problem as intricate as it is immense. Many splendid herds, created by genius, have passed into oblivion through the inability of owners to hold them up to the high average that has been attained. When a high average is reached the greatest care and skill are required, for having reached this point, there is always a tendency to degenerate. Many of the most skilful breeders of dairy cattle have been deceived by certain crosses, and it requires study and close observation to detect any error in time to prevent its extending. Whether this tendency is due to the attainment of the breeder's ideal and then a relapse, or to the exhaustion of the animal due to inadequate feeding, bad environment or bad breeding, is an intricate question.

The first and foremost aim of the breeder of a herd of pure-bred dairy cattle is to fix and perpetuate uniform characteristics in the herd. Like begets like, and were it not for their faith in this fact very few men would buy registered breeding animals; however, variation is an associate law that enables good qualities seen in an animal to be fixed and made permanent by selection. An animal may be unlike either parent in color, markings and appearances, yet possess many qualities greatly superior to either. Such an animal should not be discarded because it does not possess the markings required by the fixed standard of the herd. It is rash to reject a creative force in the shape of a sire or dam, discovered under whatever circumstances that promises to bring about the results he is seeking.

Breeders select sires and dams that have strongly inherited tendencies to breed true to one type and to transmit these inherited tendencies to their descendants, but if variation ceases and all of the animals are of one type, temperament and capacity, how are they to secure the benefits of selection? Common sense dictates that he should not keep scalawags as breeders or mate his animals promiscuously, yet I believe breeders should multiply variations to such an extent that they will have outstanding individauls in their herds to carry on the further work of improvement. It is wrong to make an idol of uniformity. The important law of variation that clothes the world with variety should be studied far enough back in ancestry and far enough ahead in ideals to enable breeders of dairy cattle to move with well-thought-out plans.

The cow that shows a profit at the end of the year gives more real satisfaction than a phenomenal producer who does her work at a loss. The dairyman's ideal of perfection is sure to be the cow that gives him the best returns, consequently she must not only be a large producer, but an economical producer. In judging registered stock for what they will produce, ancestry must be weighed to an extent of at least 50 per cent of the whole. To the man who keeps a sire or dam for producing young, a knowledge of pedigree, whether pure bred or grade, is of as much importance as the makeup of the animal itself. Estimating the value of pedigrees must ever be a determining factor in the work of breeding and success will be achieved by those who master and utilize this knowledge and do not lose sight of the pedigree's best proof, the makeup of the animal itself.

The new breeder attaches too much importance to pedigree, as it often blinds him to the necessity of going behind the pedigree for a study of the merits of the individual. Pedigrees merely trace the parentage of an animal and do not tell the merits of the ancestry. They have no value beyond tracing the parentage of the animal. It is up to the buyer or breeder to trace out the merit of the ancestry as best he can. With all pedigrees there should be records of dairy performance.

It is true that in the dairy breeds we now have the advanced registry that gives the production record of the registered animals. This record should contain a full record of the amount of food eaten during the time the record was made. Common animals would often put to shame some of the advanced registry records, if the item of food consumed was taken into account. The time has come when it is up to the breeder of dairy cattle to make pedigrees mean more than they do now.

Inbreeding is what its name would signify, while line breeding is simply mating animals of the same line of breeding, but not having the same immediate ancestors, but those that have been bred with the same general object in view. It is not necessary that they be bred in the same herd, but they should possess a similarity of type, blood lines and characteristics. This is the surest method of obtaining results in maintaining uniformity of type in a herd.

Line breeding is the closest we can come to in-and-in breeding without being in danger of impairing the size, vigor and productive capacity of the cattle. Some of the most famous dairy performers are closely inbred, but the great trouble with close in-and-in breeding is the fact that defects and undesirable qualities appearing in the sire and dam, or in their remote ancestors, will be more marked, thus a larger number of animals must be discarded from the herd than is the case where line breeding is practiced. There is seldom, if ever, an animal that does not possess some undesirable points that its owner recognizes. There is no surer way to perpetuate these points than by close in-and-in breeding. Types must be maintained, but very few herds have been greatly improved by too close inbreeding for many generations. It requires less skill and success, is far more certain to blend blood by line breeding than by outcrossing and concentrating it by uniting various families of a breed. It requires years of systematic selection and breeding to sift out the good qualities of the many families of a breed and organizing them into a single family that has a fixed type and prepotency. Breeders who attempt to multiply variations (outside of certain families) cannot succeed in establish-

Get Your Canadian Home From the Canadian Pacific

WE will make you a long-time loan—you will have 20 years to pay for the land and repay the loan—you can move on the land at once—and your Canadian farm will *make you independent.*

20 Years to Pay

Rich Canadian land for from $11 to $30 per acre. You pay only one-twentieth down—balance in 19 equal annual payments. Long before your final payment comes due your farm will have paid for itself over and over. This advertisement is directed only to farmers or to men who will occupy or improve the land.

We Lend You $2000 For Improvements

The $2,000 loan will help you in erecting your buildings, and you are given twenty years in which to fully repay this loan. You pay only the banking interest of 6 per cent.

Advance of Live Stock on Loan Basis

The Company, in case of approved land purchaser who is in a position and has the knowledge to take care of his stock, will advance cattle, sheep and hogs up to the value of $1,000 on a loan basis, so as to enable the settler to get started from the first on the right basis of mixed farming. If you do not want to wait until you can complete your own buildings and cultivate your farm, select one of our Ready-Made farms—developed by C. P. R. Agricultural Experts—with buildings complete, land cultivated and in crop, and pay for it in 20 years. We give the valuable assistance of great demonstration farms—free.

This Great Offer Based on Good Land

Finest land on earth for grain growing, cattle, hog, sheep and horse raising, dairying, poultry, vegetables and general mixed farming, irrigated lands for intensive farming—non-irrigated lands with ample rainfall for mixed and grain farming. These lands are on or near established lines of railway, near established towns.

Ask for our handsome illustrated books on Manitoba, Saskatchewan and Alberta—mention the one you wish. Also maps with full information *free.* Write today.

ing prepotency and productive capacity in their herds.

Good feeding is an integral part of success in breeding dairy cattle. Heredity is a peculiar force. We can use it to do some things, we can head it off to prevent it doing other things we do not want, and frequently it does things that no one can account for. Much that appeals to the eye is caused by what goes in at the mouth. Good breeders who have made a mark have been good feeders. Feed is not all, for there are many cows that cannot return a profit under any system of feeding. It is no more possible to get a large milk yield from cows of low vigor and capacity to produce milk than it would be to get great speed from a Belgian or Clydesdale horse by heavy feeding. No dairy farmer should feed unprofitable cows. But such cows are to be found as well in the registered herds of the country as among the grades and scrubs, although perhaps in small proportions. It is the writer's opinion that food has been as important as blood in the development of the leading dairy breeds.

Some divergence of opinion prevails in relation to the time the heifers should be bred for their first calf. It is held by many well-known breeders that the milk-producing tendencies should be trained before the fattening tendencies are beginning to be brought into play. The time for mating is so placed that the heifer will drop her first calf at about two years of age. Obviously, the time must depend somewhat upon the development secured by good care and feeding. The heifer that is compelled to take upon herself the burdens of maternity at two years of age requires a liberal system of feeding to overcome the tendency to being stunted. Breeding is not a fixed science, and in saying this I have not overlooked the Mendel law that assumes in part that breeding may be conducted along mathematical lines. Whatever laws we may pursue in breeding, it will be necessary to breed from the best and conduct a rigid system of selection and mating. Then, after we have attained a high average, it should be our aim to hold the animals in good health by the aid of well-lighted and well-ventilated barns. A sanitary and comfortable stable is essential in uplifting and holding the level of a high-producing dairy herd.

W. M. Kelly.

MONTANA LANDS

ONE of the finest tracts of lands in Montana, located in the famous Shields River Valley, the locality that won so many prizes at the land show. ...000 acres in this ranch and can sell in small farms ...sell the entire tract at a great bargain. Beautiful prairie land. Four large tractors now at work on this land.

SOUTHERN MINNESOTA LAND BARGAINS.

I HAVE a finely improved farm of 280 acres, two miles from good town, only 18 miles north of Iowa line, at $85.00 per acre. $2,500 cash will handle this fine farm—and it certainly is a fine one. Also have a fine farm of 320 acres at $70 per acre, and one of 400 acres at $75.00 per acre. Any one of these are worthy of your consideration.

11 sections of selected prairie land in Lincoln county, Colorado, at $9.50 per acre. This tract will make a fine colonization proposition.

18 sections in Billings county, North Dakota, in a very fine stock ranch with good buildings. Northern Pacific Railroad runs through the land. Will sell at $5.00 per acre. Small cash payment. Balance to suit at 6%. The coal alone on this land is worth many times more than the sale price of ranch.

In Wisconsin I have some very fine cut-over lands that are suitable for dairying. Finest water in the world. Greatest tame grass country in the United States. Lands are near markets and will sell at $7.50 to $10.00 per acre, upon your own terms. A small cash payment will secure you one of these tracts. Write for information concerning any locality you may be interested in. **Geo. R. Slocum,** 601 Pioneer Building, St. Paul, Minnesota.

CLOSING-OUT SALE

IN order to close up my real estate business I am offering for sale a number of choice farms from 160 to 320 acres in Redwood county, Minnesota, where **CORN IS KING.** 312 acres two miles from Morgan, a good set of buildings and farm tiled out. Price $75 per acre on easy terms.

160 acres without any buildings but practically all under cultivation 3 miles from Morgan. Price $60 per acre. These are only two of many good farms that I have for sale where the soil is from 4 to 8 feet deep over a good clay subsoil. Write me for further information; Address

J. C. JACKSON, MORGAN, MINN.

2 UNION County, Iowa, 80 acre farms for sale at $125 each; good 7-room houses, good barn, granary, well, wind mill and other outbuildings; one 5 miles from Creston, the county seat; one 3 miles west of Shannon City.

160 acres S. E. of Redfield, 2½ miles in Dallas Co. House, barn, granary and well with windmill. Improvements run down. This is a snap, $65. A good stock farm for some one.

200 acres, Wayne Co., 2½ miles from a new town on C. & R. I. extension Des Moines to Allerton, near the Lucas county line, south of Charlton, at $90 a. Any of the above farms on any reasonable terms. **E. E. Girton,** 605 Crocker Bldg., Des Moines, Ia.

ADDITIONAL SALE REPORTS.

The North & Robinson Co. Horse Sale.

The sale of Percheron, Belgian and Shire horses made by the North & Robinson Co., Grand Island, Neb., on March 20th and 21st, was one of the very best sales made this year anywhere and clearly indicates that really good horses are in demand and that buyers have a vast amount of confidence in C. M. North and W. C. Robinson. The nicest, cleanest conducted sale that the writer has attended in a long time was made. Every horse put up by the North & Robinson Co. was sold and absolutely without reserve or protection of any kind. One horse consigned by a neighbor stallioneer was withdrawn after a few bids had been placed on him. The horse would have sold well, however, had not the owner used poor judgment in placing a reserve bid on him. On the night of March 20th a meeting was called of the Nebraska Pure-Bred Horse Breeders' Association and a banquet was served at the Palmer Hotel. At this meeting various means were discussd concerning doing away with some adverse legislation which the Nebraska horsemen and farmers have been laboring under for some time and that has been a great deal of a handicap to both the owners and breeders of pure-bred horses and market horses as well. There is a stallion law in Nebraska today that is probably the most drastic one in the world and which has already worked untold hardship on the horse-breeding industry of that great state. The laws regulating the shipping of market horses into Iowa, Minnesota and South Dakota are likewise highly discriminating and so drastic that shipments to those states have practically ceased. Nebraska horsemen must have relief from some of these laws and that reasonably soon. Nebraska is one of the greatest horse-growing states in America and is naturally endowed with many advantages for the production of high-class stuff. To have produced most of the offering sold by North & Robinson Co. would be credit enough for any state, for this was one of the grandest lots of horses ever sold in the West. What Nebraska horsemen need is encouragement, and not prohibitive legislation. Such horsemen as Mr. North and Mr. Robinson are entitled to special honor and credit for the manner in which they have stayed with their high ideals and the writer is pleased to know that the buying public appreciated their horses. Col. Z. S. Branson did the selling and made one of the best sales of his time. This gentleman understands the principle of salesmanship as but few men, and is without question one of the foremost of his class today. Everything selling for $300 or over is listed:

14 Shires	4,900;	av.. 350
1 Belgian male	1,500;	av..
1 Suffolk male	320.00;	av..

A man near Springfield, Mo., bought 320 acres of rough, wild land, unimproved. Buying 1,000 head of goats he turned them loose on it, first having fenced it well with hog wire fence. There was considerable stone on the tract, and it was covered with scrubby brush, but within three years, that man's plan had worked so well that there had been enough brush destroyed by the goats, grass coming on with this change, that he was enabled to take in 100 head of cattle for pasturing, at $1 each per month. This is but another case showing the wonderful possibilities of goats in such instances.

Many of us become too enthusiastic about this poultry-raising business about this time of year, hatching off more chicks than we can properly feed and attend to. As a result, we raise many less fowls to maturity than we would if fewer were hatched off and given good care, feed and attention.

LOW FARES to CANADA

Settlers! Go to Canada via the Duluth-Ft. Frances Gateway or via St. Paul and Winnipeg, over the **Canadian Northern Railway.** Even if you have already selected your farm you have the advantage of traveling from 1550 to 2500 miles through Canada's richest farming country. Tickets on sale **every Tuesday** March 11 to April 29, 1913.

Just glance over these low rates—second-class, one-way fares for settlers. Tickets good for stop-over privileges.

ONE WAY

To / From	Chicago	Des Moines	Kansas City	Omaha	Minneapolis or St. Paul	Duluth

Sell every cow that does not earn $100 every year

That's what the successful dairymen in the San Joaquin Valley, California, will tell you. There is big money in dairying on this basis.

Buy 20 acres of land, plant to alfalfa, stock with 15 cows and a side line of poultry and hogs. Stick to your business—and you should earn from $1,500 to $2,000 after the second year. You can start, with success assured, for $2,000 to $2,500.

But dairying is not all. Opportunities for fruit, gardening and general farming are everywhere.

Don't take my word for it—investigate. Ask for our book, "Dairying in California." It will point out dozens of ways of finding the truth for yourself. It's free—write at once.

Best Spray Results At Cheaper Cost

Orchardists and vegetable growers who have experimented with Bordeaux Mixture know that it costs them from 40c to 66c for 50 gallons when arsenate of lead is used in the mixture. That makes a season's spraying a more expensive proposition than it need be.

Here is a better and **much cheaper** way: Dissolve

Merry War Powdered Lye

in the proportion of one can to 15 gallons of water—50 gallons of spray mixture thus costing **only 33½c.** If water is very hard use a little less than 15 gallons to each can. **Cut out and save these directions.**

It is **more effective** than Bordeaux Mixture or any other commercial spray, is **easier to prepare** and, unlike other spray mixtures, it makes such a perfect solution that no agitator is needed to get the full benefit. It is sure death to all destructive fungus growths like bitter-rot, scab, blotch and leaf-spot and also insect pests like coddling moth and San Jose Scale. Kills eggs on tender leaves and twigs but **does not injure buds or foliage.** Equally effective in the garden for destroying insects that infest vegetables and melon vines. To destroy Borers use one can to 10 or 12 gallons of water. **The drippings act as fertilizer, enriching the soil and increasing the yield.**

Try It Today You know the value of intelligent spraying. Now try the MERRY WAR POWDERED LYE way and prove for yourself, that it produces **better results at much less cost** than ordinary spraying. **There are no substitutes.**

Here's One Man's Experience

"Have used MERRY WAR POWDERED LYE for washing the trunks of my fruit trees and have received excellent results. It is a sure borer preventive. I have the healthiest trees of them all and my neighbors are now MERRY WAR POWDERED LYE users for the borer worm." J. H. REQUA, Little Rock, Ark.

Sold by Leading Dealers Everywhere MERRY WAR POWDERED LYE comes in 10c cans. It is convenient to buy in full case lots of 4 doz. cans for $4.80, at Grocers, Druggists and Feed Dealers Everywhere.

If yours can't supply you, write us, giving your dealers' names and we will see that you are supplied, and will send you **free** a valuable booklet, "How MERRY WAR POWDERED LYE adds to the farmer's profits." **Order direct of us in full case lots—4 dozen cans, $4.80, if your dealers' won't supply you.**

DON'T SOW ALFALFA SEED CLOVER SEED

OR ANY OTHER LEGUME SEED WITHOUT

"NITRAGIN"

THE GREAT NOBBE-HILTNER SEED INOCULATOR

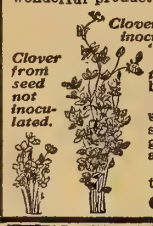
Don't sow Alfalfa, Clover, Soy Beans, Vetch or any other legume without "NITRAGIN" the Nobbe-Hiltner seed inoculator, which is endorsed the world over. No matter how good a stand you have been getting of Clover, Alfalfa or other legumes you can make it better, get it quicker, make a bigger crop and make bigger crops that follow *by using "Nitragin" inoculation.*

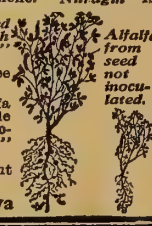
Many people think because they don't get a catch of Clover or Alfalfa it is due to climatic conditions, the soil or the seed, when as a matter of fact nine times out of ten it is lack of proper inoculation. On the other hand, many people who get a good stand are satisfied when they could just as well increase and often double their crops with *"Nitragin"* inoculation.

If you really knew what *"Nitragin"* would do for you in the way of extra crops that you otherwise could not get you would send for it as quick as you would chase a man who had stolen your pocket book.

"Nitragin" insures bigger crops and more $cash money$ for you this year

Let us tell you more about it. Don't lose any time. You can't afford at present prices of land, seed and labor to take a chance putting in any legumes *without proper inoculation.* Let us send you full particulars about this wonderful product of which last year over one million acres were sold in Germany alone. *"Nitragin"* is put up especially for whatever legume seed you will want to treat, and while other cultures may have been offered you, yet *"Nitragin" is the only inoculating material that is put up in a way that insures its being carried to you fresh,* that has a positive guarantee back of it and instructions that are simple to follow.





Notice the pictures from actual photographs of Clover and Alfalfa used without *"Nitragin"* and with *"Nitragin."* These tell the whole story. We will be glad to send full information about *"Nitragin"* together with *hundreds of letters from people who have used "Nitragin"* and give it their universal recommendation.

Write us *naming the legume crop you are interested in.*—Don't put this off. Write today.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office

SYMPTOMS AND TREATMENT.

LAMENESS.

(1) We have a two-year-old mare that became lame last June first in the hind legs and then in the right fore leg; now it is in the left fore leg. At times she is hardly able to work and cannot put her head down. Sometimes she cannot get up alone. This mare weighs 1,455 pounds and is two years old. (2) We also have another mare that we have been doctoring all summer. Her teeth were filed last spring and shortly after she became stiff necked and will go in a circle for hours at a time. She seems to eat well. This mare is fourteen years old. She hangs her head to the left side and that is the way she turns when she walks.

(1) The symptoms indicate rheumatism for which give one-half an ounce of salicylate of soda in feed twice a day and increase to three doses a day if found necessary. Bathe affected parts with alchohol twice daily, then wrap with cotton batting and bandage. (2) The brain seems to be affected from pressure by a clot of blood or collection of pus or serum. Chances of recovery are poor. Dissolve one dram of iodide of potash in her drinking water once daily for five consecutive days a week for two or three weeks.

SORES.

Have a gray three-year-old western mare that has four sores the size of a quarter about five inches apart running a little in front of the flank from one flank to the other. One runs a little and they are raw and hard. First noticed them about two weeks ago. Have done nothing for them.

The sores may develop into incurable melanotic tumors, peculiar to gray and white horses. Without examination we are unable to say what will be the outcome of the case. Each other day paint sores with tincture of iodine and once daily apply oxide of zinc ointment.

KNUCKLING.

Have a year-old colt that is healthy and growing, but he has what I call knuckle at his hind pastern joints. When he puts his foot flat on the ground his joints are all right, but when he lifts it up the joint seems to move out of place with a snapping sound. Can I do anything to cure this or will he outgrow it?

Hand rub the tendons and joints twice daily, then bandage and put on brace and ankle boot which can be bought from or made by the harness maker. Keep the colt off board floors. Make him run out daily.

LICE.

Please advise me what is the best way to rid horses and colts of lice. Have heard that tobacco water was good, and also crude oil.

Frequent use of a solution of coal-tar dip, made according to directions of the manufacturer will destroy lice, or use a decoction of four ounces of Stavesacre (larkspur) seeds to a gallon of water. Steep the seeds in boiling water and keep the vessel covered, then strain and use.

WOUND.

A five-year-old brown mare got away while hitched to a buggy about there months ago and walked a railroad bridge with the buggy, falling through several times and skinning her legs up pretty badly. She bruised and cut her left front leg between the ankle and knee until it looked like it had bursted open for about eight or ten inches on the front side of her leg, a little to the inside. There is a big ridge on the front side of the leg beside the sore and her whole leg between the ankle and knee is swollen up and hard. The sore is about well, but there will be a small place where the hair won't grow. I used air-slaked lime on the sore. What can I get that will grow hair on that place and what will reduce the swelling?

Hair cannot be made to grow upon a place where the hair roots have been killed. Hand rub the leg three times a day, then wrap it with cotton batting and put on a bandage. If swelling does not subside, rub in some 10 per cent iodine petrogen once daily. Horse should be exercised daily.

INFECTED EYES.

Some of our Shropshire lambs have been going blind at the age of one to eight days, some in one eye and some in both. At first the tears flow and the eye matters some, and sometimes the eye looks as if it had been pricked. They have a good, warm, dry barn and yard and the ewes are in good flesh. The ewes and ram all have good

Makes Lame Horses Sound

Cures All Kinds of Lameness, Quickly, Positively, Permanently.

Mack's $1,000 Spavin Remedy is absolutely guaranteed to cure Bone or Bog Spavin, Ringbone, Thoroughpin, Curb, Capped Hock, Shoe Boil, Sprung Knee, Lacerated and Ruptured Tendons, Sweeny and all other forms of lameness affecting a horse, or your

money back in a jiffy. It's a powerful remedy that goes right to the bottom of the trouble and cures the lameness in just a few days, and the animal may be worked as usual. Contains nothing that can injure the horse and heals without leaving scar, blemish or loss of hair.

Ask your druggist for Mack's $1,000 Spavin Remedy—if he cannot supply you, write direct to us. Ask for our valuable Free Book, "Horse Sense" No. 8.

If you are not positive as to the cause of your horse's lameness, mark on horse above where lameness occurs and tell us how it affects his gait, also tell age of animal. Our graduate veterinarian will diagnose the trouble and tell you how to cure it. This service is free.

McKallor Drug Co., Binghamton, N. Y.

Cures While Horse Works

If your horse has sore shoulders or galls you don't have to buy medicine or send for a veterinary to cure him—all that you need to do is to see that when he works he wears

The Lankford HUMANE HORSE COLLAR

$1.25

This collar is well built—stuffed with medicated cotton throughout; remains soft and pliable until worn out, and, if fitted properly, is guaranteed to cure sore shoulders and galls. Can be adjusted to fit any shape neck. Light and cool, easy to put on and take off. The best collars to use for colts or horses just starting to work. Will not sweeny the horse.

FREE Send for our Memorandum Account Book—keep a record of the things you're apt to forget. Sent free on request. Write for it—also particulars regarding Lankford Cotton Filled Horse Collars. Prices $1.25 up.

Electric Wheel Co., 58 Elm Street, Quincy, Ill.

strong eyes and are fed all the silage and alfalfa they will eat.

Wash the eyes at birth with a 10 per cent solution of boric acid, applied on clean swabs of absorbent cotton. Repeat the treatment once a day for a week, or until period of danger is passed. If this does not suffice put two drops of 1 per cent solution of nitrate of silver into each eye at birth. Change the ewes that are to lamb into an entirely new place where sheep have not been kept. The disease probably is contagious ophthalmia.

ABORTION.

A mare which I had bought at a sale aborted the other morning and I have since been told that she had once before. Would it be safe to breed her again and is this disease contagious? I cleaned up and disinfected the barn and stalls. Is it safe to keep her in the same pasture and barn with other mares?

If the abortion was due to germs it may be spread by this mare to other pregnant mares. There is no way of telling what was the cause, but the safe course will be to keep her away from the other mares and not to breed her before fall. Meanwhile, for a few weeks, syringe out her vagina two or three times a week with a gallon or two of lukewarm 1 per cent solution of coal-tar disinfectant.

COLIC.

Have a mare that gets indigestion and I was advised by a veterinarian to get a hypodermic syringe and use one-grain tablets of arecoline hydrobromide dissolved in water to be injected in neck to make bowels move. I tried it on her and it worked fine. Since another veterinarian tells me it is dangerous to use and causes abortion. He says to inject one-half-grain dose of pilocarpine one or two times till horse slobbers freely and then inject one-half grain of arecoline hydrobromide and it would be much safer, though it is dangerous even then. Please tell me which is right and any other information you can.

Such drugs should not be used at all by a layman. They are rightly and usefully employed by a trained veterinarian who knows how they act, when they are indicated and what doses to employ. For use by an owner we would prefer to prescribe a pint of raw linseed oil containing two ounces of turpentine and half to one ounce of laudanum; but turpentine is not quite safe for a pregnant mare.

BLIND TEATS.

I have a cow that gives milk out of just two of her teats. It is her first calf and I would like to know if you have any remedy for it. She will give about one small stream when I first commence to milk her, then I don't get any more.

The case is hopeless and the cow should be sold for slaughter just as soon as milk from the two quarters fails to pay for her keep. Meanwhile rub the affected quarters twice daily with camphorated oil.

SCIRRHUS CORD.

My pigs are troubled with a growth which begins at the end of the cord right after castrating and grows very fast. I have tried cutting them out and find it successful in a small per cent, but it is more or less apt to cause a rupture. I find matter or bloody matter inside of all the growths. Can you give me any information on this or cure?

These growths are easily prevented by making large incisions in the scrotum at castrating time and taking care to pull the cord well down and scrape it through far above the testicle. Almost the entire cord is removed in this way and no end is left on which a tumor can form. The tumors every time are due to improper castration. The operator should take lessons from some competent castrator. When a tumor forms it has to be dissected free from attachments to the walls of the scrotum and the cord is then severed above the tumor. Hogs do not well withstand the shock of such operations.

ITCHING SKIN.

I bought a black mare last spring five years old with a colt seven days old. She seemed all right all summer, and I did not work her until late in the fall, when I weaned the colt and started to work her. Since then she seems to itch. She rubs her throat and breast and tail. She seems almost wild with that itching. I looked for lice, but cannot find any. Where she rubs the hair will get white like scurf and by her tail scales come off where the crupper wears. I curry her every day. I rubbed her over with kerosene and it seemed to get a little better, but as I did not know whether or not this would be good for her I did not put any more on. Being told to put on salty grease I tried that once, but was afraid to put so much stuff on in cold weather. I feed oats, corn, straw and wild hay, and a bran mash with sage and ginger once in awhile.

Stop feeding bran mashes and reduce other feed. See that she works or takes abundant exercise every day. Clip her as soon as state of weather will allow, then wash itching places with a 1-100 solution of coal tar dip. Meanwhile rub root of tail with a mixture of equal parts of kerosene and machine oil and repeat the application as often as found necessary. The dip solution may be used right along on itching parts of body. Make sure that chicken lice are not causing the irritation.

SCOURS.

A calf about two to three weeks old was noticed scouring and would not nurse at all. It would try to nurse, but seemed as though it couldn't. I have had two calves ailing in this manner. They chew their cud and slobber at the mouth and in about three days they will get so they can nurse a little and soon recover fully. They have been kept in the barn, well bedded and clean, and turned out whenever the weather permits. As soon as I noticed them ailing I gave them Epsom salts, castor oil and flaxseed tea with a little stimulant and they get along as described above. I had a five-months-old calf troubled in this same way late last fall and when he recovered he weaned himself.

In such cases always make a careful examination of the mouth. In some we have found bedding blocking the mouth and preventing sucking or perfect swallowing. Such cases are common where planing mill shavings are used as bedding and care has to be taken to keep foals or calves from getting such bedding "balled up" in their mouths. In many instances we find an ulcerated condition of the gums, tongue or throat in your calves. This used to be called "diphtheretic sore throat," but now is known as "necrobacillosis," the infection being due to the bacillus necrophorus. Scrape each ulcer clean; then paint with tincture of iodine, or very lightly cauterize with lunar caustic pencil and afterward swab daily with 2 per cent solution of permanganate of potash. A strong solution of alum or borax also is useful for swabbing in such cases. Isolate affected calves. Disinfect and whitewash stable.

SUSPICIOUS CASE.

I have a young mare that is two years old. She had a bunch on her right side and it bursted and then went down to her hind legs. It is there now and runs matter all the time. This mare is five years old. I would like some advice as to how to cure her.

There is reason to suspect that farcy, the skin form of glanders, may be present and you should, therefore, lose no time in having an examination made by a graduate veterinarian. We would not feel justified in giving advice in such a suspicious case.

BLOOD WORMS.

I saw in a recent issue of your paper about blood worms in horses. I have a two-year-old colt with symptoms about the same as were noted in the paper. About two weeks ago I gave him a dose of medicine and in his dropping it had several hundred worms each time his bowels moved. Since that time I have not seen any. Can he be cured, and if so, how?

If you give the powders as advised, one tablespoonful night and morning for a week, then skip a week and repeat the treatment the colt will certainly be ridded of many of the worms. Unfortunately, however, these worms injure the blood vessels of the intestines, causing aneurisms, and that condition is incurable. The mixture we advise for worms is one part each of dried sulphate of iron and sulphur and two parts of salt.

Vigorous Horses Make Farming Easy and Profitable.

ABSORBINE

TRADE MARK REG. U.S. PAT. OFF.

Prevents fatigue, stops pain and lameness, reduces swellings and inflammations, strengthens the muscles and ligaments and keeps out soreness. In short, enables you to get 100 per cent of the work there is in your horse and they will give it with a vigorous pleasure. Horses and men both can stand a large amount of hard work when their health is good. Absorbine will keep your horses healthy if used regularly as soon as any trouble develops. The horses can be worked while the treatment is going on.

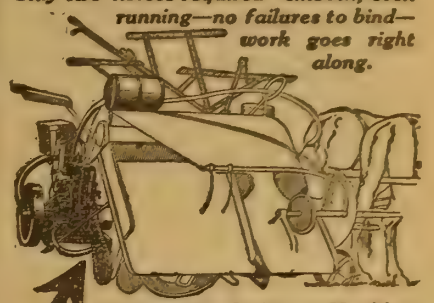
Absorbine is a mild, pleasant liniment to use—it is healing, soothing and invigorating and a positive Antiseptic and Germicide.

USE ABSORBINE to remove Bursal Enlargements, Bog Spavins, Thoroughpins, Puffs, Shoe Boils, Capped Hocks, Swollen, Painful Swellings and affections; to cure any strain or lameness; to repair strained, ruptured tendons, ligaments or muscles; to strengthen any part that needs it. You can buy Absorbine at regular dealers, price $2.00 per bottle or sent to you, express prepaid with full instructions. Write me about any case on which you would like advice. Horse book 3A free. Manufactured only by

W. F. YOUNG, P. D. F., 391 TEMPLE STREET, SPRINGFIELD, MASS.

Run Your Binder with a Cushman Engine

Only two horses required—smooth, even running—no failures to bind—work goes right along.



Horses Simply Draw Machine

The engine does all the work of operating. 4 h.p. Weight under 200 lbs. Speeds to 5 h. p. easily. Automatic throttle governor measures out fuel according to work. The original binder engine and more in use than all others combined. Detach and use for all-purpose farm power. Easy to handle, fits in anywhere. We also build 6-8 and 20 h. p. engines with same high efficiency—engines for all heavy duty. Write for free catalogue.

THE CAPEWELL

THIS CHECKED HEAD — OUR TRADE MARK

All Horse Owners ought to take interest in horse shoeing—especially in the *nail* used. Lasting, safe, economical shoeing depends upon the *nail*.

There should be protests against nails which drive poorly and break under unusual strain. They're likely to cripple a valuable animal, waste the time of your horses and drivers, and prove most expensive.

"Capewell" nails—say the experts—are *strongest* and *safest*. Best in the world at a fair price—not the cheapest regardless of quality. They cost but a small fraction of a cent more per horse shod, so any shoer can afford them.

Look for "The Capewell" nail at your shop. Have them used on your horses. You will know "The Capewell" by the *check mark* on the head.

The CAPEWELL HORSE NAIL CO.,
Dept. A, HARTFORD, CONN., U. S. A.
Largest manufacturers of Horse Nails in the World

SLOAN'S LINIMENT

For Spavin, Curb, Splint, Shoe boil, Sweeny and Thrush

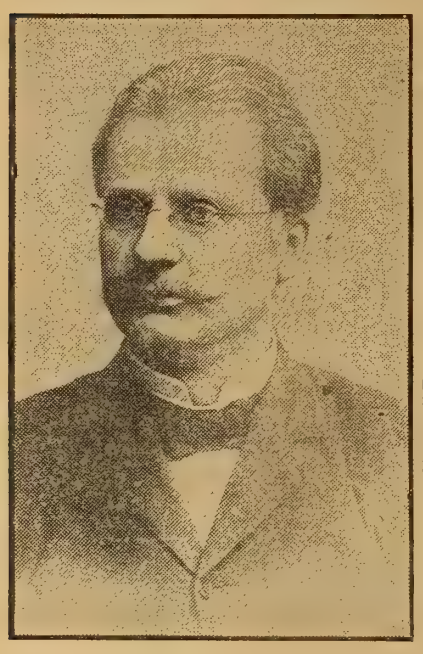
DADANT & SONS, Box C, HAMILTON, ILLINOIS

DOCTOR DE LAVAL'S DEATH.

The recent death of Dr. Gustaf De Laval at Stockholm, Sweden, removes an illustrious man from the ranks of scientists. He is known to the agricultural world because of his invention of the first continuous cream separator, although in his many achievements he has been frequently compared with the great Edison. He was sixty-eight years of age at the time of his death and was still pursuing his scientific investigations. His first cream separator was exhibited in 1877



THE LATE DR. GUSTAF DE LAVAL.

and the following year there was established the De Laval Separator organization in Europe and five years later a branch was established in America.

It is said of the great inventor that he was not a good business man and his large income from the separator and other successful inventions was mainly devoted to further experimentation and in numerous instances unsuccessful exploitation. Of his many inventions none excel in their use to mankind the centrifugal cream separator, the value of which has meant millions of dollars to dairymen throughout the world.

A MEANS OF IMPROVING DAIRY COWS.

To the Editor of The Homestead:

An effective method for obtaining improved blood in the dairy herds of certain communities has been outlined by G. R. Ingalls, the Eau Claire county agricultural representative for the Wisconsin College of Agriculture. Mr. Ingalls is located in Shaw Town, in the vicinity of which few high-production dairy herds have been established. A number of the farmers had cows, but only one bull was available, and that was a Holstein, but as none of the cows were of the Holstein type and as the people in the town preferred a smaller quantity of comparatively richer milk to a larger quantity of lower-testing milk, Mr. Ingalls investigated and found the sentiment in favor of Guernsey cattle. He discovered that enough cows would probably be brought for service to pay for the expense of maintaining a bull.

An arrangement was made whereby a farmer would care for a community bull at a charge of $50 per year, and an extra charge of twenty-five cents for every service. The service fee is $2 at the time of service, and to encourage breeding Mr. Ingalls has made a standing offer of $5 for every heifer calf from the bull. Over twenty cows were served the first three months after the bull was bought, and three of these were pure breds.

Mr. Ingalls writes that a present and very important need in many a new community is to teach the settlers how to handle a valuable bull. Many are afraid he will get ugly and will then have to be sold to the butcher. As a matter of fact, many bulls are mistreated and represent a loss to the owners. Professor Humphrey, of the Wisconsin College of Agriculture, is considering favorably the advisability of printing a circular of information on this subject and of distributing it widely.

There are many farmers who do not keep a pure-bred bull, not because they do not have the money to buy one, but because they do not appreciate his value or fear that they cannot get their money back when they wish to sell. There are cases, too, where poor farmers appreciate his value, but do not have enough money to buy one. In Douglass county (Minnesota) a co-operative plan is being successfully worked out whereby bulls are bought and changed about every two years; in Stevens county (Minnesota) individual farmers are buying bulls mutually satisfactory and trading at the end of a few years. Mr. Ingalls does not believe in a scheme whereby service to a pure-bred bull is offered free.

This work of improving the dairy herd by the Eau Claire representative is a very effective one and if as successful as it appears to be should be copied by other representatives and co-operative societies. It is really the adapting of the stallion system to cows, only on a much more modest scale and has not for its ultimate end the reaping of inordinate profit for the bull owner. W. H. Freehoff.

Echoes From a Kansas Farm

BY HENRY HATCH

A large operation on borrowed capital suits many, but it does not suit us. We feel more secure when operating within our means, doing what we can do with our own help and trying to make every lick count. The moment anyone branches out and buys the time of several men to help with the work, at that moment lost motion begins; the men shirk more or less when the boss isn't about and fail to take that personal interest in the work that a man takes who does all his work with home help.

Fall plowed land always lists in fine shape, and we are not sure but what that is the best way to get it into corn, unless the soil or the natural "lay" of the field speaks against listing. Corn top planted on fall plowing always starts off in fine shape, the soil being warmer and drying quicker from an excess of moisture, but July tells the tale, and if drouth prevails then, the top planted corn on fall plowed land goes up mighty fast. Experience has proven to us that where it is listed it will stand the drouth much better.

A riding lister, like a riding plow, does rather better work than the walking tool. This is because the riding tool has more weight and holds steady in its course. We have riding plows, also a gang; but we have not done listing enough in the past to need a riding lister, and may not in the future. We bought, two years ago, a new walking lister, which does fairly good work, but it does make a fellow's legs ache who has become accustomed to all riding tools, to follow it all day, particularly when the horsepower exceeds the load. Planting after listing with a common planter suits us better than the work any planter does that is built with the lister.

There are a number of people who seem to have it in their heads that the farmer is not getting as much credit as he should get, and at a rate of interest as low as it should be. We are not so sure about this, as there are any number of farmers not more than a hundred miles from us, who operate quite extensively, who are said to be owing all the way from $10,000 to $30,000. They appear no better than the rest of us, so it would seem as if there is credit a-plenty when farmers can load up to this extent.

Too much credit is the worst thing that can happen to some folks. It causes them to lose their heads and "buy everything in sight." Such enterprise may be commendable, but often the judgment exercised is not of the best, and the ability to secure a large credit ends in a long struggle to get from beneath the load of debt.

So far there has been no heavy rainfall to pack the soil, and we hope there will be none. Last spring all the leavening done by the frost was quickly put down as solid as ever by the immense amount of water in the late March snow. Our soil lays up light and loose now.

At this time last year we were wading around in eighteen inches of snow, which, a little later, was turned into mud of about that depth. We are still better off than last year, but our early spring, as foretold by the ground hog and the early Easter, has gone glimmering. It is up to the sign believers to hunt up an entirely new set of signs to swear by.

The frequent showers are keeping the fodder in fine shape for husking and handling. Because of the steady dry fall and early winter, those who husk shocked corn by hand still have plenty of it to do, and are now finding a fine time in which to do it. The weather is warm enough so a fellow doesn't shake with seventeen kinds of chills at the work that keeps only hands busy.

Ohmstede's Short-horn Sale.

A good gathering of Short-horn cattlemen from southern Nebraska and northern Kansas were in attendance at the sale of Short-horn and Polled Durham cattle made by John Ohmstede, Guide Rock, Neb., on March 19th. A very nice offering was put up and it seemed to the writer that prices ruled too low, although Mr. Ohmstede expressed himself well pleased with the results. A very nice lot of choice young cows were put up, but the fact that they were all Short-horns and bred to a Polled Durham bull affected the sale of them materially. They being Short-horn cows, they did not appeal to the Polled Durham men, and being bred to the Polled bull made many Short-horn men hesitate. However, it should be to the everlasting credit of Mr. Ohmstede to be able to send such a choice lot of stuff through the sale ring. Col. John Brennan did the selling and those selling for $100 or more are listed:

BULLS.

Erensty, calved 1911; Chas. Amack, Wheeler, Kan. $110.00
Dick, calved June, 1911; Joe Bent, Blue Hill, Neb. 100.00

$595 And It's Easily Worth $850.00

Just Think of It

A Remarkable Factory to Farm Price

Galloway's Auto Transport

Farmers, Business Men and Pleasure Seekers! Here is Galloway's latest pet—his Auto Transport—so called because it will actually go through snow and mud and transport anything or anybody—anywhere—or any time—safely, cheaply, economically—and you can buy it at a price that was never equalled in the history of the auto business before and on terms so easy that you will hardly realize you are paying for it.

It Does the Work of Three Teams

Is Built for the Hardest Wear and is a Wonderful Convenience and Money Saver

With this rig you can do more work in one-half the time than three men and three teams can do in a day. It hits the nail right on the head and it is built for the hardest wear and tear. It is guaranteed to give the best of service and satisfaction. Notice the size of the wheels, the large hubs, heavy, durable spokes and rims, axles strong and yet not too heavy, and wheels of just the happy medium—neither too high nor too low. You can put on the back seat and take your family to church or for a pleasure ride; you can haul your pigs, calves, sheep, milk, poultry, eggs and vegetables to market and be back home again before you could even reach town with a horse and wagon. Just think of the convenience of a rig of this kind. When you want something from town in a hurry you can jump into this transport and you have got it before you know it. You can go to town for your groceries, flour, feed, furniture, hardware, cement and lumber or anything you can think of and you can do it cheaper than you can drive a horse and wagon.

HOW I MAKE THE PRICE

There is only one way that I could make a price of $595 on a rig of this kind, and that is by making them in big quantities. Remember this auto transport is no toy. It is practical, durable and built of the best material that could possibly be used for the purpose intended, and will give you all the service and satisfaction any car could give you even though it cost you twice as much. Send for full description and my special introductory offer that will help you pay for the transport and make you money at the same time. Write me today and you will be mighty glad of it

WM. GALLOWAY CO., 10 Galloway Station WATERLOO, IOWA

SAVE 25 TO 50% ON HARNESS $25.00 FREIGHT PREPAID

For $25.00 we offer our Leader No. 53—1½ inch Team Harness set down at your railroad station. This harness, designed and made for durability and service is the biggest bargain we have to offer. While the price is exceptionally low for a harness of this nature, quality has not been sacrificed on that account. But, "after quality, it's the price that counts." In the harness here illustrated only the very best grade of Oak Tanned Leather has been used in its manufacture and our money-back guarantee stands behind every sale.

We issue a 100-page, completely illustrated catalog, jammed full of just such bargains as shown in the illustration.

Just drop us a card and we will send you by return mail one of these handsome books. We manufacture all our own harness in our spacious factory at Waterloo. This alone accounts for the rock bottom prices we quote—no jobber, salesmen, agents or brokers to split up the profit—just the manufacturing cost with one small profit added. This accounts for the fact that we are absolutely the largest manufacturers of harness and leather goods, selling direct from factory to user.

A comparison of quality and prices will surprise you. Write today to

WESTERN HARNESS & SUPPLY CO., 613 Main Street, WATERLOO, IOWA

DATES FOR LIVE STOCK SALES.

Aberdeen Angus Cattle.

Apr. 8, Dispersion sale, Walter Roberts Estate, Atlantic, Iowa.
Apr. 16, Chas. Escher & Son, Botna, Ia.
Apr. 30, Association spring bull sale, Omaha, Neb.
May 2, Association spring bull sale, Chicago, Ill.
May 3, Association spring bull sale, East St. Louis, Ill.
May 27, P. J. Donohoe, Holbrook, Iowa.
May 29, Otto V. Battles, Maquoketa, Ia.

Short-horn Cattle.

Apr. 10, A. C. Shallenberger, Alma, Neb.
Apr. 22, Geo. Allen, Lexington, Neb. (sale at South Omaha).

M. T. White, western Iowa and Nebraska (north of the Platte river). Address 4015 Izard St., Omaha, Neb.

Carlos C. Palmer, eastern half of Iowa and Minnesota. Address 2714 High St., Des Moines, Iowa.

Fred V. Johnson, Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address 924 Hearst Bldg., Chicago, Ill.

Ray L. Gribben, northwestern Iowa, South Dakota and southwestern Minnesota. Address West Hotel, Sioux City, Iowa.

A. T. Cole, Missouri, Kansas and Oklahoma. Address 3900 Holmes St., Kansas City, Mo.

H. E. Browning (swine division), Wisconsin, Illinois, Indiana, Ohio, Michigan and Kentucky. Address Hersman, Ill.

John C. Halderman, Kansas. Address 4347 Harrison St., Kansas City, Mo.

A. W. Hopkins, Wisconsin. Address 201-202 Washington Blk., Madison, Wis.

J. C. Price, southern and western Nebraska. Address 145 So. 28th St., Lincoln, Neb.

C. C. Carlin, special assignments in central, southern and northern Iowa. Address 715 Clinton Ave., Des Moines, Iowa.

FIELD NOTES.

W. A. Dickey, North Manchester, Ind., has a proposition among the other fence and gate advertisements in this week's issue which will prove interesting to our readers who are looking for a special agent's proposition on which they can make good money.

J. W. Troy, Rose Hill, Iowa, breeder of Duroc Jersey swine, wishes The Homestead to announce that he is entirely sold out of bred sows and that he could have sold many more had he had them. Mr. Troy also wishes to thank the public for their patronage in the past.

Two good young Short-horn bulls are advertised for sale by M. A. McWilliams, Wall Lake, Iowa, elsewhere in this issue. One is a yearling and the other is a nine-months-old calf and the price is $100 each if taken right away. If you want a bull you better go and see these bulls right away.

The man who is going to want a good young Scotch bull will be interested in that good Cruickshank Secret and a good Bridesmaid that H. B. Harden, Corning, Iowa, is offering for sale. He is pricing these worth the money and you had better see them at once if you are going to want a bull this spring.

In sending copy for his advertisement found elsewhere in this issue, R. E. Baldwin, breeder of Short-horn cattle, Osceola, Iowa, writes: "The thirty-six bulls I am offering are an extra good bunch. The older bulls are big, robust fellows, ready for hard service, and should all go in a bunch. These bulls are red and roan, grandsons of Imp. Cock Robin and Imp. Crescent Knight, and are of the following families: Clipper, Charity, Lancaster, Miss Ramsden, Beauty, Brawith Bud, Duchess of Gloster and Princess Royal."

J. G. Westrope, Harlan, Iowa, one of the most noted Short-horn breeders in the West, is offering some splendid Short-horn bulls for sale. Among these is the great young Scotch bull, Scottish Rex 3d, a yearling bull sired by Royal Rex 3d, that in turn was a grandson of Imp. Cock Robin. This bull is a red in color and is a Campbell Rosebud and is good enough to head any herd in this country. He is a solid red in color and an outstanding good one. He also offers several young Scotch bulls and a number of the Scotch-topped sorts. If any of our readers are going to be on the market for a Scotch or a Scotch-topped bull this spring it will pay them to go and see Mr. Westrope's bulls at once. When you write him kindly mention The Homestead.

Silver Laced Wyandotte, Barred and White Plymouth Rock, Rhode Island Red, Orpington and White Crested Black Polish stock and eggs can be furnished readers of this paper by Wm. Nelers, Cascade, Iowa, as per advertisement found in this department.

Farmers and others who are interested in the purchase of Percheron or Shire horses should not fail to get into communication with H. P. Wilkinson & Bros., Mitchellville, Iowa, whose advertisement will be found on another page of this paper. Wilkinson & Bros. make their own importations and select personally all animals which they bring over. They have at the present time a splendid lot of imported and home-bred stallions from two to five years old. These are extra good and will be sold at prices which on investigation will be found to be in keeping with the merit of the horses. The home-bred animals are from imported sires and dams and have therefore all the advantages of the imported ones. The Shire stallions are of the same ages and Wilkinson & Bros. say they are of the sort that cannot be beaten. They have also for sale a limited number of Shire mares that will weigh from 1,500 to 1,900 pounds in fair flesh. As it is their intention to visit the old country in August or September, an effort is now being made to dispose of all surplus stock so that a new start may be made when the next importation arrives. We are also advised that the firm have for sale a few Aberdeen Angus cattle of both sexes. Address all inquiries to H. P. Wilkinson, Mitchellville, Iowa.

The Regal Motor Car Company.

The country buyer of automobiles will take a good deal of interest in the big advertisement of the Regal, which appears elsewhere in this paper. One of the strong points of this car is that it is built low on the underslung plan with the frame below the axle, a system which puts the weight at the lowest possible point and keeps the center of gravity so located as to positively avoid overturning. The Regal is a rare beauty built on attractive lines with high excellence of finish and a price which makes it worth while for buyers to investigate it thoroughly. Write for particulars to the Regal Motor Car Co., 204 Piquette Ave., Detroit, Mich.

Iams' 1913 Horse Catalog.

One of the catalogs that recently came to our table that bears inspection is the 1913 horse catalog of Frank Iams, St. Paul, Neb. As usual, it is Percheron and Belgian stallions and mares and it also embodies a lot of reading matter that is particularly interesting to horsemen at the present time. It is a catalog that never fails to interest those who are engaged in the draft horse business, because it is always full of life and animation, and the artist has done well in picturing a number of the best stallions and mares that he now has in his barns. It will be remembered that Mr. Iams contested the stallion law as it now stands on the statute books in the state of Nebraska and a decision was handed down in the district court in his favor. He devotes a chapter to the law which will make interesting reading to all horsemen. When you write for this catalog kindly mention this paper.

The Butterfly Cream Separator.

The manufacturers of the Butterfly cream separator, which is advertised quite fully elsewhere in this issue, have not only put out a machine which is durable, easily operated, thoroughly attractive, effective, but one which is sold at a price which puts it within reach of every farmer and one which is sold under conditions that make it folly for any farmer not to buy it. The catalog which describes the separator is complete. It contains a series of illustrations which show every detail of construction, thorough descriptions and quotations of prices that seem to be almost too good to be true. This catalog is free. It may be obtained by writing to Albaugh Dover Co., 2262 Marshall Blvd., Chicago, Ill., if this paper is mentioned. Terms for the easy-payment plan of sale may be obtained by filling out the coupon in the advertisement and forwarding to the same address.

A Farmer's Seed House.

At La Crosse, Wis., is the center of a rich farming district where the red clover and alfalfa flourish, where the barley and oats return year in and year out bountiful yields, where field peas and seed corn furnish the dairyman abundant crops, and where forage plants, like sand vetch, Billion Dollar grass, hog clover give yields that gladden the heart of the farmer and fatten the purse. And in this district the John A. Salzer Seed Company have for years grown their famous pedigree seeds, which have found a home upon every wide-awake farm throughout the North and central West and everywhere have increased farm yields. This year the Salzer Seed Co. make a great specialty of seed oats, seed corn, seed barley, seed potatoes, field peas, sand vetch and alfalfa clover, all pedigree strains bred right up to health, quality and big yields, and their 1913 catalog, which is gladly mailed to our readers upon request, bristles with seed truths. Write them today.

Russell Sells 200 Holsteins.

May 1st and 2d and the dates for the annual offering of Holstein cattle from the Idle Hour Place herd of T. H. Russell at Geneva, Ohio, and for this event Mr. Russell has selected 200 head of the best things in his herd. Mr. Russell is a big man and he does things on a big scale, so that when the announcement is made that 200 head of Holstein cattle, all from advanced registry or heavy-milking ancestry, are to be offered at public sale our readers may know that it is no ordinary event. Mr. Russell maintains one of the largest herds of Holsteins in the country on his big farm at Geneva and the very best breeding known to the Holsteins predominates. It is not our purpose at this time to go into any details regarding this sale. That we will leave for future issues. But we do want to say that this will be the big event of the year in Holstein circles. There will be other sales, of course, but none like Mr. Russell's. He has the goods and he is not at all afraid to trust them to the consideration of the buying public. This sale will be an eye-opener. Write today for a copy of the catalog to T. H. Russell, Geneva, Ohio, mentioning this paper, and watch these columns for particulars.

Percheron Stallions.

Elsewhere in this issue L. A. Matern, Wesley, Iowa, advertises some young Percheron stallions of good quality and at prices that make them attractive. Buyers will make selections from horses with bone, substance and size here, and you can choose from yearlings up to five year olds. Write him for prices on this stuff. Address L. A. Matern, Wesley, Iowa.

Highly Recommended Potato Cutter.

Elsewhere in this issue is advertised the Winans seed potato cutter. The value of this machine to extensive potato growers is shown in the following letter from Frank Loucks, Breckenridge, Minn., who says: "I can recommend it to anyone as the best and most practical cutter on the market and anyone who raises any amount of potatoes cannot afford to be without one of them. They are worth double the price they are sold for."

Trees at Half Price.

Earl Ferris, proprietor of the Earl Ferris Nursery, at Hampton, Iowa, has an announcement in the horticultural department of this week's paper which will prove interesting to many of our readers. Concerning his selling methods Mr. Ferris says: "My catalog is my salesman. It costs me only one cent to send it to you. It clearly describes and prices my evergreens and "True-to-Name" fruit trees as well as any salesman, and leaves you to make your own selection. My customers get the saving I make in not having agents." Mr. Ferris' specialty is evergreens and he has a very attractive proposition in this week's issue. In addition he has a large stock of Delicious apple trees, Earl plums, Jones strawberries and many others. Look up his advertisement and write him, mentioning The Homestead.

Nolans' Lice Killer.

For years Nolan Bros., extensive squab raisers, Ruthven, Iowa, were bothered with lice and other vermin in their pigeon ranch. Every known remedy was tried, but none proved entirely successful. After years of investigation they perfected a remedy of their own which first became popular in their neighborhood, but the sales now are spreading all over the state. The late Peter Elierbroek, the well-known breeder of Poland China hogs, endorsed the remedy as follows: "It is great stuff and I have never found better during my thirty years of experience in raising thoroughbred hogs. I advise every hog breeder to try it and believe they will find it as good as I have. In chicken coops I have found nothing better. Its effect not only lasts for weeks, but for a great length of time."

Saunders Has Some Good Bulls for Sale.

The Short-horn man who is looking for a good bull to head his herd might do well to call on that old reliable breeder, C. A. Saunders, Manilla, Ia., and take a look at the bulls he is offering for sale. He has a number of good Scotch bulls, some of which have been prize winners. Two of these belong to his noted Gypsy Maid family and a couple belong to that noted Gardenia tribe. He also has a number of other good bulls that he is pricing

FRANK IAMS' DRAFTERS.

The man who is smashing prices on what he calls "big, nifty, classy Paris winners," in other words, "business stallions and mares." See the advertisement elsewhere in this issue.

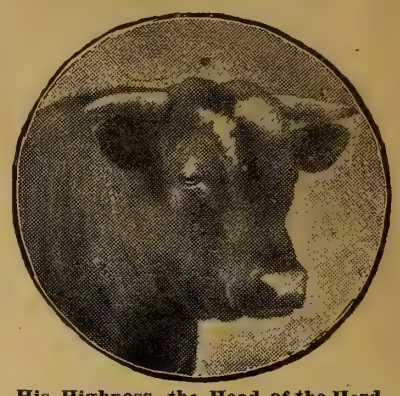
SHALLENBERGER'S GREAT SALE
SCOTCH PEDIGREE SHORT-HORNS
WILL BE HELD IN SALE PAVILION IN CITY OF
ALMA, NEB., THURSDAY, APRIL 10, 1913

His Highness, the Head of the Herd.

FORTY-FIVE carefully selected individuals make up the offering, the greater part of which are pure Scotch. The best tribes are represented, and the offering is strong in the get of noted sires. The great Victor's Roan Duke has a few daughters in the sale. Imp. Scotch Bank, and Imp. Scottish Sentinel are also the sires of choice young things in the offering. His Highness, one of the great bulls of the day, is well represented in the younger stuff and many are in calf to him. The great opportunity of the western stockmen is at this sale, if in search of high-class breeding material. Sons and daughters of famous sires and dams make up the principal part of the sale stock. We are positively offering some great herd-heading bulls, as well as choice female stock. It is a good time to buy, and this will certainly be a good place. Would like to send you a catalog and a postal mentioning The Homestead will bring it. Address.

A. C. SHALLENBERGER - ALMA, NEBRASKA

Col. F. M. Woods, Auctioneer.



His Highness, the Head of the Herd.

worth the money. Go and see Mr. Saunders at once if you are on the market for a bull. Mention The Homestead when writing him.

Iams' Drafters.

Frank Iams, St. Paul, Neb., believes that he has some draft horses worth going 2,000 miles to see. In the near future he proposes to open a barn of thirty horses and let the public inspect them for the first time. Concerning his offering he says: Ikey buyer, never mind who "is president," "Bryan or Wilson." Buy a through ticket to Frank Iams' "horse emporium," St. Paul, Neb. Walk right in, "shake hands" with the "peaches and cream" horseman and say "hello." He will meet you with a "smile that won't rub off" and treat you like a "king" and make a "horse show" for you that is worth going 2,000 miles to see. Iams' Percheron and Belgian stallions and mares are in the "pink of condition" and ready for a "quick selling" and must be sold. They are the "best ever," larger horses of quality and extra big bone and more "Paris and European prize winners" than any man in the U. S., but close money and "Iams' cash" opened the doors of the best horsemen in France and Belgium and Iams made a "big killing," bought "tops" "worth the coin," cut the melon and Iams' customers get the benefit of his "big, easy buy." Iams' thirty-one years of successful business of selling 5,444 horses, his fifty trips across the ocean make him a safe man to do business with. His stallions and mares have all been "registered," approved and inspected by governments of France, Belgium and U. S., and certificates stamped "O. K." Iams gives a certificate of health and soundness with every horse signed by a deputy state V. S. of Nebraska. "Ikey boy," Iams has opened up a new barn of thirty horses (not seen by public before). "Buzz around," sing Iams' song, "buy horses of Iams," as he is selling fancy, "sensational" "black boys" cheaper than ever, more and better horses for the money. Iams' catalog is an "eye-opener," the book of books, and has a $1,000 bargain on every page. It's "the man behind the dough" that has "competitors up in the air" over his big horses and low prices. He saved $300,000 to "stallion buyers" in 1912. That's Iams, the "square deal horseman." He is the largest individual importer and breeder of Percherons and Belgians in America. He sold 120 horses in 1912 and saved $1,000 each to his customers, and sold them a "peaches and cream" stallion that made them $1,000 in service fees. "Ikey boys," this is the "gold mine" year for you to buy and breed horses. First-class horses are high and scarce and will be high for ten years yet. Take that money out of your old "tobacco box" and buy a stallion and four mares of "Iams," the "king horseman." "Buzz around" Iams' town of barns. They are filled to the roof with sixty imported stallions and mares, two to six years old, weight 1,700 to 2,500 pounds, 80 per cent blacks (grays $200 less than blacks). Iams sells his "show horses" annually. He buys new and better ones each year. For thirty years Iams has been "buzzing" the heads of the "gold brick stallion salesmen" with better and larger stallions, forcing the breeder and importer with inferior stallions and mares to sell them on the "auction block." Iams guarantees to sell you better stallions at $1,000 and $1,400 (some higher) than are being sold to farmers' stock companies at $5,000. If you don't find this so, you get the $500 Iams hangs up. It's not because your sweetheart is the "swellest girl" that Iams tells you in his "ads" of money he will save you. He wants your business, that's why he advertises. He wants a $1,000 or $1,500 "smile" and your visit. He will make the "wheels of business" go round. Iams can place $1,500 insurance. He is an "easy man" to do business with and his horses are so good they sell themselves. You say, why can Iams sell better stallions at half the price of others? Iams buys and sells every stallion himself at his home barns. He buys stallions by "special train load;" he speaks the language, saving 20 per cent. He is not in the "stallion trust," saving you $300. He pays no "slick salesman" $1,000 to sell you a fourth-rate stallion. He has no two to ten partners to share profits with. He buys for cash. He sells stallions by "hot advertising" and having the "goods" to make every statement good. Iams will save you $1,000 or more in commissions. Iams' largest and best "Paris winners" are yet in his barns and must positively be sold. Iams' "selling clothes" fit all buyers. Write for his 1913 million-dollar horse catalog and eye-opener.

Maasdam & Wheeler's Percherons.

Maasdam & Wheeler, Fairfield, Iowa, have on hand the best lot of imported and home-bred stallions and mares ranging in age from one to five years that can be found in any stable. They have on hand about sixty head from which buyers can select. This firm have been importing, breeding and exhibiting Percherons for a number of years and have won some of the most important prizes at the leading live stock shows in this country. They have bred a large number of their prize winners and have some on hand at the present time that are good enough to win at any state fair. Their recent importation is in fine condition and they have horses with the bone, the size and general conformation that good judges admire. This firm handles their horses in an economical manner and for this reason can make prices as low on strictly good Percherons as any importer in America. They will be pleased to hear from any of our readers in need of a good stallion or mare and will be glad to show visitors around at any time. When writing mention The Homestead. See advertisement elsewhere.

Shallenberger's Great Sale of Short-horns.

The writer would like to call special attention to the sale of Short-horn cattle that will be held by Hon. A. C. Shallenberger, Alma, Neb., on April 10th. We believe that the time is opportune to engage in the cattle business, we believe that to delay will be costly, and we also believe that to start with cattle of low grade will be unnecessarily expensive. For these reasons just stated and for the further reason that many excellent cattle will be offered in this sale we especially ask that you give this sale of choice stuff your careful consideration. Mr. Shallenberger has spent many years in building up this herd, has employed careful business methods, which have included many excellent herd bulls and good female purchases. The value of his good work is hard to estimate and by many we know will not receive due appreciation, but to the man who has striven to build up a herd, to the man who has put forth earnest effort to raise the standard of the beef cattle of a community, to this man will the work of this master breeder appeal. The writer wishes that he might convey in adequate words to the new man the importance of starting right, the absolute necessity of getting the right sort of stuff to start with and the equal importance of making this start now. We are confident that the opportunity presented in this forthcoming sale of choice stuff is one of the great chances of the early part of this year to start right. The great bulls, Imp. Diamond Rex, Imp. Scotch Bank, Imp. Scottish Sentinel, the great Victor's Roan Duke and His Highness are some of the sires employed in building up this herd. Imported cows and bulls of high order have been in use at all times and it appears to the writer that such an opportunity should not be allowed to pass. Among the choice bulls that will be offered are Royal Peer by Victor's Roan Duke and out of the noted cow, Iole by Coming Star, Evening Star by Imp. Scotch Bank and out of Starlight Bess by Imp. Diamond Rex and Paymaster by Imp. Scotch Bank and out of Ashbourne Isabella by Bar None. Another is by Combination by Victor Sultan, but one of the very best of this sale and the best of the year is Star Attraction by Imp. Scotch Bank and out of Imp. Maud 44th. He is a bull of much substance and nice conformation and of beautiful blood lines. Watchword is out of the same cow, one year younger, and sired by Imp. Scottish Sentinel. Keep these bulls in mind, they are right. We will not mention the breeding of the cows in detail, but will ask that our readers send for the catalog at once, as it gives the same in detail. When writing please mention The Homestead.

Rids Hogs of Vermin.

Keeping hogs free from parasites that irritate them and cause skin diseases is more or less of a problem with all hog raisers. Everyone knows that dipping and spraying are very unsatisfactory processes. They not only involve time and labor, but are sometimes harmful to hogs, to say nothing of the money cost. One of the several machines now on the market which aim to overcome these serious objections and keep the hogs free from vermin is the O. H. C. hog oiler, advertised elsewhere in this issue. It is an iron post with automatic oil-feeding device which oils the hogs when they rub against it, and the oil means death to the vermin. It is a simple contrivance, operates automatically, uses crude oil, which is the cheapest and best fluid for the purpose, and doesn't waste any of it. All that is necessary is to set the post up in your hog lot and the hogs will do the rest.

Hanna's Offering of Short-horns.

Those who attend the sale of Short-horns from the Cottage Hill Farm of D. R. Hanna, Ravenna, Ohio, to be held at Chicago, Ill., Friday, April 4th, will in no way be disappointed. One of the best lots of Short-horns to be offered this year, and the strongest collection that has ever come from Cottage Hill, will be submitted to the appraisal of the public. Manager John Garden has selected for this sale a class of cattle that will appeal to the discriminating buyer. Many are by Villager, the stock bull at Cottage Hill, and a bull that is fast taking his place as one of the great sires of the country. Last year he had to his credit the undefeated calf herd, the undefeated young herd, the undefeated senior and junior heifer calves, an honor never before achieved by one sire. Included in the females for this offering is Village Primrose 2d, the undefeated senior heifer calf at the 1912 shows and junior champion at the International, while she has for company a cracking lot of young things, all of the best breeding, some of them by Villager, and all of breeding age not sired by Villager bred either to him or his sons, Village King and the sensational Village Denmark, a trio of the greatest sires in the country. Village Denmark was a sensation when shown as a calf, and now that he has developed into a wonderful bull it is the purpose of Manager Garden to show him the coming season, and he is an outstanding candidate for championship honors. Ten bulls are listed, six by Villager and four by Village King, and among them will be found both herd-heading and show-yard material. The value of the Villager blood is apparent to all who are observers of events in the cattle world. He is a getter of cattle of the highest class, and his sons are proving themselves as prepotent as their sire. Villager is a success, both as a sire of bulls and of heifers. His sire, Village Beau, is one of the greatest sires of show stuff in Great Britain, so that the bull can confidently be looked to to give the right kind of an account of himself. We believe it a safe prediction that the blood of Villager is bound to be one of the strongest factors in Short-horn cattle circles, and it behooves every breeder to get some of this blood in his herd. Practically every animal in this sale will either be by Villager or one of his sons or bred to them, so that Villager blood is bound to be secured, no matter what the animal purchased. Several of the cows will sell with calves at foot by Villager or one of his sons. Manager Garden has chosen the cattle for this sale with the sole purpose of giving the public a satisfactory lot. In fact, there are many cataloged that both he and Mr. Hanna are very loath to part with, but they are determined to give the buyers more than an even divide. This sale comes Friday afternoon of next week, April 4th, following the Anoka sale at Waukesha, Wis., on Wednesday, and the Sayer-Stanton sale at Chicago, Ill., Thursday afternoon and Friday forenoon, April 3d and 4th, the Hanna cattle selling the afternoon of April 4th. Practically 200 head of cattle are to be sold at these sales, so that buyers will have an excellent opportunity to secure some bargains. The final announcement of the Hanna sale appears elsewhere in this issue. There is still time to get a copy of the catalog if you have not yet secured one. Write at once to John Garden, Ravenna, Ohio, mentioning The Homestead.

The Kansas City Hereford Sale.

R. T. Thornton, 1309 E. 15th St., Kansas City, Mo., will have in the May 6th sale of Hereford cattle at Kansas City, Mo., a large number of bulls and females that should interest buyers from over a wide range of territory. There will be cattle for the breeder, the range man and the farmer looking for good strong breeding cattle. If interested write Mr. Thornton now, mentioning this paper.

Roberts' Angus Dispersion Sale.

One of the very excellent opportunities to buy Aberdeen Angus cattle this spring will be at the dispersion sale of the Walter Roberts herd at Atlantic, Iowa, on April 8th, when sixty head of well bred cattle will be offered. The death of Mr. Roberts some time ago is the reason why this herd is now put upon the market, and while it is to be regretted that it becomes necessary to disperse this herd just now, it is nevertheless going to be a splendid place to buy Angus cattle. During the past five or six years Mr. Roberts has been one of the best buyers of high class Angus in the West, and included in this sale will be many choice individuals that have topped the very best sales. There will be a most royally bred lot of females in this offering and all those old enough will be bred to Imp. Eston of Eshot, and Enchantress Trojan Erica, formerly used in the Chas. Escher herd. Those not bred to him will be bred to the old herd bull Deceiver, Botna Valley Blackcap or Botna Valley Prince. Altogether there will be twenty-six head of Blackbirds in the sale and about sixteen royally bred Ericas. Twenty-one cows in the sale will have calves at foot, and this in itself will be a good reason why it will be a splendid place to buy Angus cattle. There will be about twenty nice yearling heifers in the sale and three good imported cows, viz.: Imp. Elnora, Imp. Erebena, and Imp, Percefoam of Stenhouse. Among the choice females to be sold will be Blackcap Echo, a choicely bred Blackcap cow that topped the Chas Escher sale in South Omaha at $805. One of the best bulls in the sale will be out of this cow and also a good heifer of hers goes in. She herself is bred again to the young Blackbird bull and she will certainly be one of the good things in the sale. Another good cow is Blackbird Bess, a daughter of Imp. Earl Eric of Ballindalloch and she is safe in calf to Imp. Eston of Eshott. She is a prize winner herself and she is one of the choicest Blackbird cows in the sale. Blackbird McHenry 52d is another great cow that sells with a heifer calf at foot, as does also Enchantress 16th, an International winner. Some good bulls are also listed, among which is their old herd bull, Deceiver, that in turn was grand champion bull at Seattle, and was a winner at other well known shows. He is a good breeding bull and is all right in every way. Botna Valley Blackcap is a two-year-old and is a son of Sir Blackbird and out of Blackcap Echo, the good cow we first mentioned. Black Pier, by Black Barney is another good thick Blackbird bull, together with a few other Blackbird and Trojan Ericas that are bred well enough to head good herds. it will certainly be a splendid place to buy Angus cattle and we trust there will be a good turn out of breeders on this occasion. When writing for catalog kindly mention Iowa Homestead.

Hereford Bulls for Sale.

Elsewhere in this issue will be found the advertisement of A. Spooner & Son, Mondamin, Iowa, who are offering 100 head of good, serviceable Hereford bulls for sale. These bulls are in good shape, are of strong ages, and are strongly bred in Anxiety blood. Quite a few of these are sired by such well-known bulls as Beau Gondoline, Rex Onward 4th, Dandy Andrew and Bright Master. If you are on the market for a Hereford bull, either one or

SPECIAL SALE OF PERCHERON and BELGIAN STALLIONS
FOR NEXT THIRTY DAYS

New importations arriving! Two large importations received since January 15th. Another importation of stallions and mares now on the water. More to arrive in April. We have at any time of the year more BIG-TON, HIGH-CLASS PERCHERON and BELGIAN stallions than any other firm in U. S.

HOLBERT HORSE IMPORTING COMPANY.

A. B. HOLBERT, Proprietor — GREELEY, IOWA.

a car load, we will by all means say to you to go and see these at once. They will also sell a car load of cows and heifers if you are on the market for females. When writing the above firm kindly mention The Homestead. The best thing, however, is to go and see these cattle right away.

Shire Stallion for Exchange.

Elsewhere in this issue will be found the advertisement of Perry O. Brown, Lamoni, Iowa, who offers for sale or exchange for Short-horn cattle a good six-year-old Shire stallion. He is a sure foal getter, a good breeder and is all right in every way. Mr. Brown will sell him outright or he will exchange him for good Short-horn cattle. Write him at once and tell him what you have.

Powell Buys Beatty's Herefords.

We have been advised that J. C. Powell, Guthrie Center, Iowa, recently bought the entire herd of Hereford cattle owned by Walker Beatty, one of the oldest and best known breeders in the state of Iowa. There were between forty and fifty head in the transaction, headed by the splendid bull, Beaumont's Defender, a son of old Beaumont, and he traces seven times to old Anxiety 4th. Mr. Powell recently made a dispersion sale himself, but he could not keep out of the business and his love for the Herefords was too strong and he is again in the business for all time.

Rist Offers Choice Seed Corn and Oats.

One of the good seedsmen of Nebraska and the president of the Nebraska Pure Bred Seed Growers' Association, is offering a nice lot of choice seed corn and oats and he says that the prices are lower than he has ever before offered the same quality of seeds for. The reduction in price is brought about by increased yields of his seed farms and better means of handling, storing and better equipped methods of selling. All of these improvements have been for the betterment of his many buyers, for Mr. Rist is satisfied with a small profit, and wishes only to make such an income as will enable him to extend his business, but just now he is making the very closest prices in order to widen his field of distribution and add new customers to his already big list. Leading varieties of oats, and choicest seed corn and other farm seeds are offered. Mention The Homestead and address at once for catalog and full particulars.

West & Son Sell Percherons and Belgians.

On April 17th, Hon. Frank S. West & Son, Wood River, Neb., will sell a choice lot of Percheron and Belgian stallions and mares. This sale will mark the complete dispersion of the well-known stud maintained by these gentlemen for so long. Mr. West was the second purchaser of the noted foreign dealers, Vallandinghem & Co., and have been continually at it ever since. The horses included in this sale will be among the very best ever offered for sale in the West. Nearly all are imported, and the long acquaintaince that these gentlemen have had with the dealers across the water, insure them getting a class of horses that all American importers cannot well get. All the horses offered will be young, and in their very prime. All the mares of breeding age will be well forward in foal or with colts at side. The stallions are all of serviceable ages, and fine thrift. Good colors, and highly desirable is the entire offering. Do not fail to send for a catalog today and when writing, mention The Homestead.

Firme & Stone Sell Short-horns April 23d.

R. C. Firme, Hastings, Neb., and A. A. Stone, Hansen, Neb., will hold their annual sale of Short-horn cattle in sale pavilion in Hastings, Neb., on April 23d. This is the day following the George Allen sale at South Omaha, and the train service is extra good between points. The Firme & Stone sale is an annual event that should be well attended this season as there will be an extra choice lot of cattle put up. Some good, strong, young bulls are being sold, and an extra choice line of young cows and heifers will be offered. The Firme herd is extra strong in the blood of Choice Goods, while the herd owned by Mr. Stone also has much of the same blood lines, and also the blood of Imp. Diamond Rex. Mr. Firme has never spared any reasonable expense in buying his herd bulls. He has paid well up into four figures several times and the resultant good of such sires will be in evidence on sale day. We wish that readers of The Homestead would send in their names immediately, that they may get the catalog as soon as out. Mention this paper when you write and address either R. C. Firme, Hastings, Neb., or A. A. Stone, Hansen, Neb.

Merritt's Seed Catalog.

A catalog of unusual value is put out by Archie G. Merritt, Kellerton, Iowa. It is free from unnecessary exaggeration and gaudy colors and confines itself wholly to practical matters. Mr. Merritt is making a record as a seedsman and we believe it will pay our readers who are looking for good seed to look up his advertisement in the horticultural department of this week's issue and send him an order.

Irvine Goes to Europe.

Chas. Irvine, that enterprising young horse importer and breeder, Ankeny, Iowa, has decided to go to the home of the Belgian and Percheron this year and make his own selections in person. Mr. Irvine's judgment of horses is remarkably good, his selections in the past have been a credit to him and there is every reason to believe that the animals he will select in France and Belgium will be right up to the highest point of excellence of the two breeds. Mr. Irvine, of course, is making this trip for the purpose of buying Belgians and Percherons for himself, yet he is willing to accommodate those farmers or breeders who might wish to have him make purchases for them. Those who do so will be assured of fair and honest treatment and will be accorded the most reasonable prices. Mr. Irvine has during the past four weeks made a number of sales of high-class horses, among these a stallion to I. C. Dowell, Conway, Iowa; a stallion to the Elm Lawn Horse Co., Ireton, Iowa; a stallion to E. O. Nervig, Slater, Iowa, and a mare to Al Mathis, Polk City, Iowa. An announcement of Mr. Irvine's willingness to accommodate his friends will be found on another page of this paper. Those contemplating taking advantage of his assistance should not fail to remember that they should act promptly, as he will sail from New York April 15th. Direct all inquiries to Chas. Irvine, Ankeny, Iowa.

Anoka Farms' Short-horn Sale.

Wednesday of next week, April 2d, is the date for the annual offering of Short-horn cattle at Anoka Farms, Waukesha, Wis. For this event Mr. Harding has selected forty-five head of the top things in his herd, and W. H. Miner, Heart's Delight Farm, Chazy, N. Y., is contributing eight head, the whole forming one of the most attractive offerings of the season. Fourteen bulls are listed, including a dozen with the blood of the great Whitehall Sultan coursing through their veins. We have spoken at considerable length regarding much of this offering, and can only at this time emphasize the necessity of attending this sale if they wish to secure top Short-horns. Remember the date, Wednesday, April 2d, at Waukesha, Wis.

Young Offers Choice Short-horn Bulls.

With this issue of The Homestead R. M. Young, Cook, Neb., is starting an advertisement in which he offers some very choice Short-horn bulls at what are certainly bargain prices. Mr. Young states, however, that he wishes to sell at once, hence the prices named. This is one of the oldest Short-horn herds in eastern Nebraska and the stock sent out from this herd has always made good. Good blood lines are represented and good cattle are certain to be purchased from Mr. Young, and he is the sort of man whom one wishes to do business with. Mr. Young also breeds Duroc Jerseys and is offering a choice lot of bred gilts at $35 each. These gilts will farrow in early April, in fact, some for the whole month, and a few in the first of May. Readers of The Homestead should avail themselves of this opportunity at once. Mention The Homestead when you write and address R. M. Young, Cook, Johnson county, Neb.

Augspurger's Poland Chinas.

E. J. Augspurger, Pulaski, Iowa, has an advertisement in this issue offering Poland China bred gilts for sale. He writes: "I have an extra good lot of gilts bred, sired by a son of A Wonder and bred to my old herd boar, Jumbo's Big Prospect. They are due to farrow about April 20th and are a choice lot of hogs."

Two Good Herd Bulls for Sale.

Elsewhere in this issue W. M. McLaughlin, Shelby, Iowa, advertises his well-known bull, American Goods, for sale, and he is one of the best of all the sons of Imp. Choice Goods now living. He is a six year old and is now in his prime. He weighs 2,200 pounds in breeding condition and he belongs to that celebrated Marsh Violet tribe. He is retaining his heifers in the herd and is therefore offering him for sale. Should someone prefer he will sell his Jasmine bull, the splendid son of Nonpareil Prince that he bought of Chas. Daws. Inasmuch as he now has three good herd bulls he has decided to part with either one of the two older bulls and he will give the buyer his choice. He also has about ten younger bulls for sale and he will price them worth the money. When writing him kindly mention The Homestead.

Milliken Offers Galloway Bulls.

James Milliken, the Galloway breeder at Media, Ill., is making an offering of Galloway bulls that should attract attention. Mr. Milliken has four bulls coming two years old, five coming yearlings and two aged bulls, one four and one six years old, that he will sell worth the money. These bulls are a good, strong lot, all well bred, and parties in the market for good bulls will make no mistake by inspecting them. Mr. Milliken has also females of all ages for sale at farmers' prices. There is no better bred lot of Galloways on any farm than is possessed by Mr. Milliken. The herd contains more McDougall 4th of Tarbreoch blood than any herd in the United States. McDougall 4th was one of the greatest show and breeding bulls that the breed has produced. He was champion of Scotland in 1901, winning first at Castle Douglas, Royal of England and Scottish Highland shows. The same year he was imported to the United States and was champion at the International show and a winner at all the big shows for several years. He was a very prepotent sire, his get having size, substance, quality and character, and the cattle that Mr. Milliken offers are as good Galloways as can be found anywhere. They will be priced at attractive figures to quick buyers. Write Mr. Milliken at Media, Ill., stating your wants, and mention The Homestead when you write.

Insull Buys Truman Mares.

John G. Truman, manager of the Pioneer Stud Farm, Bushnell, Ill., writes: "One of the most interesting transactions in Percheron horses this season is the sale by the Pioneer Stud Farm to Samuel Insull, president of the Commonwealth Edison Co., Chicago, Ill., of six imported Percheron mares and one imported Percheron colt, which, together with one of the mares, is sired by the great horse, Intitule, that we sold to Mr. Insull during the International for $10,000. We question very much if there can be found on one farm in this country three as good Percheron mares as are included in this transaction. They were bought regardless of price and will materially strengthen the Percheron department at Hawthorne Farm. The same gentleman purchased our black and white Hackney pony, Sthoreen Bawn, well known throughout America as one of the most attractive ponies ever exhibited. It will pay any breeder of Percheron horses to call at Hawthorne Farms and see Intitule and his colts. I am pleased to say that our trade still continues brisk, the inquiries being for strictly first-class horses. We feel safe in saying that our new importation, which sailed from England the first week of this month, and which should be in our stables by the time this reaches your readers, is one of the best and most select lots of horses that we have ever shipped. We shall be pleased to forward our 1913 catalog to any of your readers interested in high-class draft horses." See advertisement elsewhere in this issue.

The Sayer-Stanton Short-horn Sale.

Thursday and Friday, April 3d and 4th, the days following the Short-horn sale at Anoka Farms, Waukesha, Wis., 200 head of Short-horns will be sold at Chicago, Ill., by George J. Sayer, McHenry, Ill., and Thomas Stanton, Wheaton, Ill. On Thursday Mr. Sayer will sell fifty head of carefully selected cattle from his herd and Friday forenoon, April 4th, Mr. Stanton will offer the best fifty head that have ever been sent forward from Sittyton Grove herd. The fifty head in the Sayer offering are practically all females, as the demand for bulls has been so heavy that practically the entire crop has been disposed of. The get of many noted sires is represented in this sale. There are daughters of the $10,000 show and breeding bull, Prince Imperial; Glenbrook Sultan, one of the greatest breeding sons of Whitehall Sultan; Leader of Fashion, a great breeding son of the champion, Whitehal Marshall; Whitehall Rosedale by the champion, Avondale; King Cumberland, an International champion, and other strong sires. The majority of the females in the Sayer offering have been bred to Roan Sultan, a son of Glenbrook Sultan, an International winner and one of the best Short-horn bulls in the country today. It would be difficult to find a more attractive sire than Roan Sultan, and the fact that practically the entire offering is bred to him gives added value to every female in the sale. The fifty head that Mr. Stanton will offer contain more outstanding good things than have ever before been offered in a draft sale by this gentleman, and the buying public should not be slow to take advantage of the opportunity to buy the top things that will be offered. Several very strong bull propositions are included in the Stanton offering. The seller realizes that the public is discriminating, and that while they want cattle they want the kind that will stand up under all conditions. This is the kind he is cataloging, and a careful inspection of them shows conclusively that they are a high-class lot in every way, while the breeding is absolutely the best to be found in the herd book. Much interest should attach to this sale from the fact that Mr. Stanton is going to offer the choice of his herd bulls at this sale. He owns Masterpiece by Cumberland's Last, and Browndale Sultan by Avondale. These two bulls are among the outstanding sires of the country, but Mr. Stanton does not require the services of both bulls, so he has decided to give those present at the sale an opportunity to bid for the choice. He can spare either, but not both, hence he is going to give the public an opportunity to say which they prefer. This should attract the attention of those everywhere who are in the market for a proven herd bull. There will be cattle in this sale to attract and please all classes of buyers. The sale follows that of Anoka Farms at Waukesha, Wis., and precedes that of D. R. Hanna at Chicago, Ill., April 4th, the Stanton cattle selling in the forenoon of that day and the Hanna cattle in the afternoon. These four sales give practically 200 head of Short-horns from which to make selections. The final announcement of this sale appears elsewhere in this issue. Look it up and arrange to be at Chicago on Thursday and Friday of next week, April 3d and 4th. The catalog can be secured by addressing Thos. Stanton, Wheaton, Ill.

Escher's Great Angus Offering.

On April 16th, at their Longbranch farm, Botna, Iowa, Chas. Escher & Son, will again make their annual sale of sixty head of high class Aberdeen Angus cattle, and it is an offering that surpasses anything that has heretofore

NEXT WEEK'S SALE PROGRAM

Wednesday, April 2	Short-horns, Anoka Farms, F. W. Harding, president, Waukesha, Wis.
Thursday, April 3	Short-horns, George J. Sayer, Chicago, Ill.
Friday, April 4	Short-horns, Thomas Stanton, Chicago, Ill.
	Short-horns, D. R. Hanna, Chicago, Ill.

been sold from this or any other herd in this country. It is a draft of cattle that has been selected with discriminating care, and includes both imported and home-bred of a high order. They are selling fifty head of females and twenty-five of the cows that go into this sale will average 1,500 pounds. Thirty-five of the cows will have calves at foot by some of the celebrated bulls that they are using at the head of the herd. Such scale and Angus merit when coupled with producing females is worthy the attention of every Angus breeder in this country. Included in this sale will be twenty head of Ericas, twenty Blackbirds, ten K-Prides, and the balance will be Pride of Aberdeens, Queen Mothers and Heatherblooms. Just a word here regarding the bulls that these cows are bred to. First, of course, is Imp. Earl Eric of Ballendalloch, regarded as the greatest Trojan Erica bull today in this country. Earl Eric was a first prize winner at the Perth show in 1906 and cost them $1,000 in Scotland. Some of the cows have calves by him and others are safe in calf to him. Others will have calves at foot by Imp. Eston of Eshott and their great K-Pride bull Kelberg, while others will be in calf to Imp. Eurotas of Finlarig, the young bull that was a first prize winner at the Perth show in 1909 and cost them $1,500. Besides these we must not overlook their two great young prize-winning bulls Prince Felzer, a son of Imp. Prince Felix of Ballendalloch, and Bromo, a son of Imp, Earl Eric of Ballandalloch. The former was second prize bull at the Iowa State Fair last fall and was picked by the most of the ringside talent for first place in the junior class. The latter was first prize bull in senior calf class and two better young bulls will be hard to find in any herd. Some of the females they have listed will be bred to these two great young bulls. They are selling ten of the best imported cows they have in the herd and five of these will have calves at foot. Altogether it is the greatest bunch of Angus cows that has ever been listed for a sale in America, and it is the largest burch of matured females that was ever seen in one offering. Every cow in the sale is a regular breeder, of the rent paying kind, as the calves at foot will prove, and from a breeding standpoint we will say that no better can be had in this or any other country. There will be ten good young bulls in the sale and four of these will be double bred Trojan Ericas and every one a herd header. The bulls they are selling will range in age from ten to twenty months, and there are some outstanding good ones. We will speak of them more fully in later issues, but if you are thinking of buying a bull you can depend upon it that they will offer some of the best young bulls that will be listed for sale this season. Altogether their offering is of unsurpassed excellence, and without question is the greatest bunch of Aberdeen Angus cattle that was ever cataloged for a sale in this country. Every Angus breeder should make it a point to get together and be present at the Escher sale. While all other breeds are now coming into their own it will be a good time for the Angus breeders to come forth and once more show the world that the Angus ranks first and foremost as the greatest beef cattle in the world today. We, therefore, hope you will be present at the Escher sale. Their catalog is now ready and can be had by asking for it and mentioning Iowa Homestead.

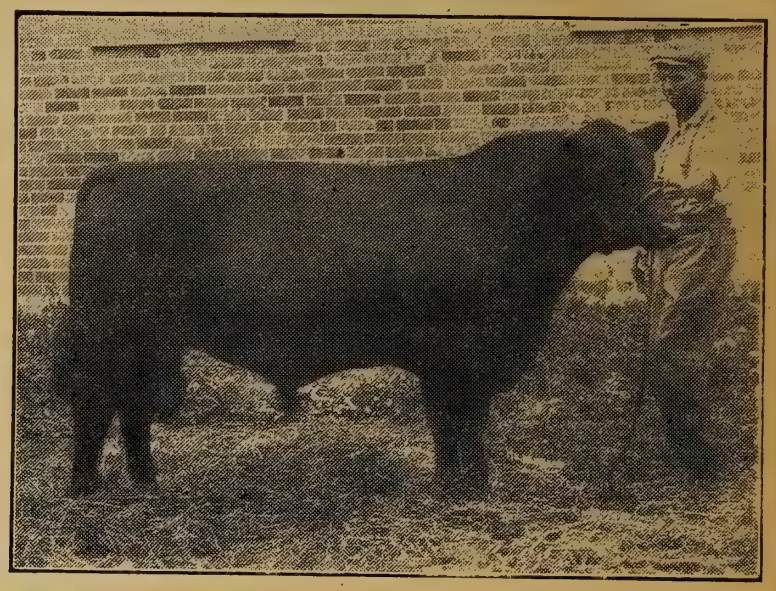
ESCHER'S ANNUAL SALE OFFERING

ABERDEEN ANGUS CATTLE

AT LONGBRANCH FARM,

BOTNA, IOWA, APRIL 16, '13

50 COWS AND HEIFERS, 10 BULLS.



Prince Felzer, an Iowa State Fair winner and one of the greatest young bulls in our herd.

INCLUDED in the sale are 20 royally-bred Ericas, 20 Blackbirds, 10 K-Prides, balance Prides, Queen Mothers and Heatherblooms; 35 of the cows will have calves at foot and 25 of these cows will average 1,500 pounds; 10 imported cows. The best we have ever owned go in, and 5 of these will have calves at foot. We are including 4 Trojan Erica bulls, each one a double-bred Trojan Erica, and a herd header as well. Also a number of other choice young bulls. No better offering of Angus cattle has ever before been listed for a sale in this country or in Europe. Catalog can be had by asking for it. Address

Col. Silas Igo, Auctioneer. CHAS. ESCHER & SON, Botna, Iowa.

Please mention The Iowa Homestead when writing for catalog.

The Mission of the State Fair.

THE original mission of our state fairs has largely been performed. We have now come to another age, in which a new kind of educational service is required of these institutions. In the beginning they were more exploitational than intentionally instructive; their chief function was to advertise the agricultural resources of the great sisterhood of new states. They could not be effective advertisements without having a definite educational and inspirational influence. Their underlying purpose, whatever the wording of the laws which brought them into legal existence, was to attract homeseekers, to induce the clearing and cultivating of virgin soil, to encourage manufacturing, to build up powerful commonwealth, with productive industries and a prosperous, contented citizenship. This was essentially pioneer work. It had to be done, and it has been done, and now other and more important things demand the serious consideration of fair managers and the agricultural public behind them.

A new set of economic and social conditions have been developed in America. It cannot properly be dealt with if we employ old methods. We require new bottles for the new wine which a new and changing America has produced. Our forefathers had vision and looked far ahead into our own time, but they could not forsee our larger problems. They laid a foundation and even built a commanding edifice, but they did not lay upon us the moral obligation to maintain the old structure after it outlived its usefulness.

There is no sort of moral, social or economic justice in entailing property and institutions upon posterity. Future generations have a right to meet their peculiar problems in their own way.

It is sentimental stupidity to reverse traditions and old methods; life is action. Change is the natural order. We must not live too long in the past. Our new and changing life is the red wine that demands modern bottles. An old fact becomes a basal truth tomorrow. Even a seeming untruth often springs into the full flower of a precious verity.

It is evident to any open-minded student of our contemporary life, both commercial and moral, that the old order has changed; that an intricate newness of human society is a fact; that new blood, new methods, new points of view and new ideals are necessary, if we are to solve our current problems, meet our moral obligations, make the most of our splendid opportunities and fulfil our destiny.

Henceforth the fairs have a new and broader mission. Their comparatively simple and crude work has been finished. They have abundantly justified and paid for themselves. They have earned the right to live and flourish. Many of them come down to us in a condition of vitality and eagerness for useful service. Shall we regard them as perfect tools with which to do modern carpentering, blasting, digging, cultivating, seeding, reaping and harvesting, or shall we agree at once, as level-headed men, with eyes open to our own conditions, that they should be changed, sharpened and readjusted?

In the future the fairs must be increasingly instructive, inspirational and entertaining. My own emphasis would be on the last two words, for the things that inspire and entertain inevitably educate. Moreover, our emotions no less than our minds need cultivation. We crave more play and amusement than we take or give.

A modern state fair is a celebration, a festival, a vacation, a recreation. Its essential spirit is entirely foreign to the morbidly serious purpose which our toiling forefathers had in view when they brought fairs into existence. We have outgrown many of the restraints and dogmas that may have been useful in earlier days. We demand more freedom, more joy, more life, than our ancestors dared even to seek. Our attitude toward life is not their attitude; it is less austere, less afraid, less serious. We believe as firmly as they believed in useful education; we respect as much as they respected productive, honest work, but we demand a longer and higher reach of the spirit, a larger scope for the play of our own life, a wider outlook, a greater incentive to thought and action, a nobler excuse for our living. It is impossible for us to be satisfied with their program, excellent as it was for its day. We are compelled by the dynamic force that surges through us to utilize our own personal resources, our individual powers, in building and reshaping the present.

First of all, the fairs need a complete readjustment to the new conditions of society and industry. In fact, the process already is under way. Our most successful fairs are in a healthy transitional stage; they are shifting various organic ways to serve the present generation. A few others are indolently jogging along, hanging to the past, dissipating their waning energies by duplicating themselves, listening to the whispering voice of the past and so failing to hear the clarion call of the living present. It is no wonder that they are having difficulty in securing appropriations. Lacking freshness, enthusiasm and the modern spirit, they are incapable of arousing and holding the fastidious interests of the people. As simple, honest, unadorned, purely agricultural institutions, full of everything excepting inspiration, new ideas and life, they are all that a stolid, incurious, dull-edged craftsman could desire. As expressions of the newer agricultural spirit they are open to serious objections. While standing in an elemental way for education—a narrow education that no longer is needed, in its old form—they do not stand broadly and complexly for the

Short-horn bulls, Gloster Mine and Gloster Fashion, winners as produce of cow at 1912 International. Owned by Anoka Farms, Waukesha, Wis. Gloster Mine is included in the sale to be held at Anoka Farms, Wednesday, April 2d. He has eight first and second prizes to his credit for the last show-yard season.

new and vital education which present-day life requests.

What was meant by the word education twenty-five years ago is not what we mean by education in relation to our own problems, especially in agriculture. Years ago the man whose hand was trained could easily make a living from the fat soil; today the man who succeeds on the farm must have a trained mind. Where the hand used to rule the head now holds sway. We do not need less brawn, but more brains.

Our fairs should exploit the science of agriculture; they have done their share of exploiting the art. When they began their work we had no science of agriculture; we had a crude art. Practice was emphasized. Educational results were secured by means of imitation; what one man did another, seeing the result and securing the prescription, could do. For many years the history of practical farming has been nothing more than the perpetuation of dogmas, the following of ancient example, the wearing of old shoes, the unthinking worshipping of a venerable Confucious represented by old, fossilized methods.

Now that science has come modestly, but actively into the field, the whole trend of agricultural education has changed. We now seek scientific facts, with their fascinating philosophies and social implications, where our forefathers found and were content with rules, plans, prescriptions, cut-and-dried statements and formulas which could be used like machines. Land has become soil, with its millions of life forms and chemical wonders; animals have come to be individuals, with marvelous capacities to serve man; crops are living, feeding, breathing plants, with beautiful relationships, wondrous adaptabilities and an astonishing veracity—yielding, besides their own wealth, important information to the man who is trained to interpret their language.—[D. C. Wing before Association of Fairs.

In and Around Wisconsin

A car load of high-producing grade Holstein cows and heifers were purchased last week from farmers living in Monroe and La Crosse counties and shipped to Idaho, where they will be the foundation stock for a herd of "black and white" cattle, which is to be established upon the Honey-suckle farm at Hayden Lake, Kootenai county, Ida. The manager of this farm is J. W. Bilkey, who is a graduate of the Wisconsin College of Agriculture and who previous to his going west was engaged in the dairy business in Wisconsin. Under his supervision the F. Lewis Clark Company, of Spokane, will establish a model dairy upon their Honey-suckle farm. At the head of the herd will be a Hengerveld bull, which he purchased from W. H. Ascott, of Sparta, who is the secretary of the Monroe County Holstein Breeders' Association.

It is doubtful if this legislature will extend the time for the use of undersized berry boxes or baskets. Many of the members are of the opinion that berry growers and dealers have been given sufficient time in which to dispose of all stock which did not measure up to the required capacity and are inclined to permit the inspectors to impose fines upon those who persist in selling fruit in boxes which are not up to the standard required by law. The enforcement of this law will be left to the dairy and food commission of which J. Q. Emery is the chairman.

To the end that Waukesha may continue to be known for the excellence of its Guernsey cattle and the reliability of its breeders, officials of the Waukesha County Guernsey Breeders' Association have adopted the following rules for governing the consignment of cattle to their fourth annual sale which will be held in Waukesha on May 15, 1913. No animal will be cataloged until an entry fee of $3 has been paid. Animals under five months of age at the time of the sale cannot be consigned. Substitution of animals will in no case be allowed. The outside sale of animals consigned to the sale is prohibited. Every animal consigned must be accompanied by a certificate of health. Every animal must be guaranteed as represented and every consignor will be held responsible for his representation. All animals offered for consignment will be inspected by a committee representing the association, who will have full power to accept or reject as they think best and consignors to this sale will not be allowed to bid upon any of the offerings or permit others to bid for them. Purchasers of breeding stock consigned to the fourth annual sale of this association are certainly protected in a very unusual manner. The Waukesha county breeders are determined to make their county one of the leading Guernsey cattle centers of this country and their association an organization known for the square dealings of its members.

That the outlook for sheep husbandry has never been brighter than it is today is the opinion of Frank Kleinheinz, shepherd of the University of Wisconsin flocks. In support of this contention Mr. Kleinheinz argues that the western ranges have been so cut up and divided as to make it impossible to raise sheep in large numbers upon them, that the Australian flockmasters have lost millions of their sheep during the past two years on account of heavy drouths and lack of feed and that many Wisconsin farmers will be induced to engage in sheep raising because of the difficulties in employing labor to carry on the more demanding types of stock raising. It is up to the smaller farmers of the middle West, he declares, to raise more sheep and to make up the shortage of the needed supply, and he ventures to predict that sheep will bring very high and satisfactory prices for many years to come. The frequently expressed fear that a democratic president will remove the tariff from wool does not give him grave concern, for he believes that conditions in all the wool-producing countries of the world are such as to provide a market for our wool at entirely satisfactory prices.

The exhibits of Clydesdales and Percherons at the 1913 Wisconsin State Fair will be superior to any ever seen upon the Milwaukee grounds, if the plans of the Wisconsin Horse Breeders' Association and the state board of agriculture mature. Upon the recommendation of the officials of the horse breeders' association Clydesdale and Percheron futurity classes have been established and a purse of $800 will in all probability be provided for winners in this division. It is not improbable that the Wisconsin classes will be done away with and that the premiums in the open classes will be extended three places. At the recent meeting of the state board it was decided to eliminate the classes for grade coaches and to put forth special effort to secure a better representation in the grade drafter classes.

If creamery butter is not to have a tainted flavor the cream should be collected by the haulers at least twice each week. In a community in which the cream is collected but once each seven days it is almost impossible for the patrons to supply cream, which when made into butter will be entirely devoid of foreign flavors. Thirty-one per cent of the exhibits of butter entered in the Wisconsin Butter Scoring Contest for March scored 93 per cent or higher and but 4 per cent fell below 90, which record shows the superior quality of one of Wisconsin's dairy products. The average water content of the entire display was below 14 per cent and but two exhibits exceeded the limit of 16 per cent.

For the purpose of encouraging the production and feeding of more and better beef cattle the Southwestern Wisconsin Fair Association will provide a premium fund of $320 for an exhibit of fat steers at the fair to be held in Mineral Point from August 19th to 20th inclusive. The cash awards are to be given for the three best yearlings, three best two year olds and the three best three year olds of any breed which have been fed by the exhibitor. The amounts are to be $40 for first, $30 for second and $20 for third premium. The sweepstakes premium will be $50. D. E. Jacobs, of Mineral Point, who is the secretary of this fair association, is confident that the liberal premium fund will bring out a representative display of the breeds of beef cattle raised in southwestern Wisconsin, which is the leading beef-producing section of the state.

A BOOK ON VEGETABLES.

It is safe to say that the farm garden is the most mismanaged part of the average farm unless it be in those cases where it is under the entire supervision of those who also have the household affairs in charge. In many cases it is a species of wanton neglect on the part of the farmer though, of course, there is the old excuse that there is no profit from the garden and that labor must be placed where it will bring returns. As a matter of fact the farm garden can be used to cut down the household expenses very greatly and it is for the purpose of accomplishing this end that a very convenient little book has recently been issued from the pen of Mr. Allen French. It is a work of 300 pages and it sells for fifty cents. Every conceivable kind of garden crop is discussed in detail and specific instruction is given on methods of sowing, harvesting, storing, etc. Not only that, but the various diseases of garden crops are enumerated and methods for keeping all kinds of pests in check are given in detail. We are in a position to furnish our readers with copies of this work at the above mentioned price and we hope that many will take advantage of this bargain counter offer. The book is well illustrated and is up to date in every way.

"A strain of barley has been developed in Wisconsin that last year was six and one-half bushels ahead of the average yield. That increase on the entire acreage of last season would have been worth $27,000,000," says the Wall Street Journal. "We plant 37,000,000 acres to oats and get an average of less than thirty bushels, when more could be obtained. The ten-year average yield of potatoes is 92.7 bushels per acre. Maine has produced as nigh as 220 bushels. A potato will reproduce, not like itself, but like the nest or hill it came from. Yet little attention is paid to selection, which could increase production 50 per cent. When 3,500,000 acres are planted, what a shameful waste! Cotton planters should know that their salvation lies in their power to increase the yield and improve the quality. The expert in charge of cotton breeding in the department of agriculture says: 'By a system of selection and breeding, both yield and quality could be greatly raised. As an estimate of the advantage to be gained annually, $200,000,000, is not unreasonable.'"

"I believe that hogs will sell at nine cents or higher in April, and most of the hog shippers from the country whom I talk with now and then say that next summer is when we will feel the real shortage of hogs," said Patrick Cudahy, the Milwaukee packer.

TOO LATE TO CLASSIFY.

100 HEAD HEREFORD BULLS FOR SALE 100

WE are offering 100 head of good serviceable bulls. Good shape, strong ages, big-boned fellows and strongly bred in Anxiety blood. Will also sell car load of heifers and cows. Come and see us right away.
A. SPOONER & SON, - - MONDAMIN, IOWA.

Mule-Foot Hogs
Oldest breeder in the State. Pedigreed stock for sale
Samuel Johns, Sec. A., Wilmington, Ohio

Productivity of Select Seed Corn.

By James H. Murphy.

THE prospects for valuable results both practical and scientific from corn breeding are, it is claimed, very much brighter today than ever before. There is a demand for pure-bred seed corn, which is far from being satisfied, while the price of such corn is four times that of the ordinary feed corn. However, in these days of prosperity we often lose sight of the fact that as much or more of the value of a crop is dependent upon its care, than upon the type of seed used. Due to the high prices and big demand for pure-bred seed corn many growers become careless in their methods, and indolent in their attendance to the fertilization, cultivation and other vital points so essential to the growth of a good crop of corn. According to Prof. C. P. Norgord, of the Wisconsin College of Agriculture, much of the poor corn yields in this state are due not to the use of poor seed, but to poor or untimely cultivation. Land to produce a good corn crop must be fairly rich, but experience has shown that applying barnyard manure and then plowing it under is a rather wasteful method, and does not give nearly as good results as does top dressing the same land. Although instances are often given where spring plowing has produced very good corn crops, general experience has shown that in the long run fall plowing is far more satisfactory, and practical, and is the only method which should be followed. When fall plowing is followed by a deep thorough cultivation with disk and harrow in the spring, the ground is put in a nearly ideal condition for the corn crop, and also for subsequent cultivation throughout the season. Frequent light cultivations throughout the growing season, especially if the season is drouthy, have a very beneficial effect upon the crop. Experienced farmers never allow the surface soil to bake, cultivating every week and always as soon as possible after every rain. More frequent cultivation proves beneficial during a dry season, but even this may be carried to an extreme. One farmer of my acquaintance went so far as to finish cultivation for the season by dragging an old iron wheel between the rows, pulverizing the soil to a dust, which at the first rain packed and hardened like so much concrete. Such treatment is a detriment during the remainder of the growing season.

The rotation followed has a decided effect upon the corn yield, but the practice found most successful by the farmers of this state is to plow up clover sod for corn, follow the corn with oats or barley, and then seed again to clover. The manure from the farm is always used to top dress the clover fields, and this puts the soil in an excellent condition of fertility for corn. It is best to put oats or barley on land at that period of rotation when it is in the least fertile condition, because a too rich soil will cause a rank growth and consequent lodging. The land is usually left in clover for two or even three years.

Aside from the matter of soil and cultivation, the yield is always greatly influenced by uncontrollable conditions such as rainfall and climate. These will greatly affect the crop from year to year, but proper cultivation is beneficial under any conditions. No fixed rules can be prescribed as to the best methods and time of cultivation, many experienced and successful farmers following vastly different systems. All agree, however, in recommending frequency of cultivation, a good seed bed, fertile soil and a good rotation. Vital as these points may be, however, we must never lose sight of the fact that good seed is an absolute necessity. Good pure-bred seed of a high percentage of germination is recommended by all growers as one of the most highly essential factors of a good corn yield.

The winter was so mild that none of the berry bushes were killed. We recently got eighty blackberry plants from our brother's "patch" and although they were young and tender, not even the tips were pinched by the winter freezes. Peach buds seem to be few in number on the trees, however, and a certain per cent of those appear to be killed.

FUNDAMENTAL PRINCIPLES OF THE RAFFEISEN BANKS.

There are four fundamental principles of the true Raiffeisen banks that were insisted upon by the founder. These are:

(1) Unlimited liability to the members.
(2) A restricted area of operation.
(3) Gratuitous management.
(4) No dividends.

Under the circumstances under which these banks were established these principles were the most natural course to follow. The members were practically without credit and it was only by assuming unlimited liability for all members that they could hope to acquire any collective credit. The question of limited or unlimited liability was a matter of little consequence to the individual member. But as the rural banks have spread into the more prosperous agricultural regions of Germany, and especially among farmers of varying degrees of prosperity, the principle of limited liability has been adopted. In the Province of Saxony, for example, in Prussia, one of the most prosperous and fertile agricultural sections of Germany, there are nearly 700 rural banks, but practically all of them are organized on the limited liability basis.

Restricting the operations of the banks to a limited area was the natural consequence of adopting the principle of unlimited liability. Members would only be willing to join such an organization where they knew each other personally. Raiffeisen thought to make the bank the center of the economic life of the rural community or parish and at the same time a member of a larger organization. This feature has been generally adhered to in the development of the rural banks. At the present time their business is confined to relatively limited areas.

The principle of gratuitous management has been emphasized in the description of these banks much more than it deserves. In the small circle in which they did business and the relatively small volume of business they transacted, the position of director on their boards was one of honor, that took little time and was performed as a matter of course, without compensation. The accountant or bookkeeper who did the work of the bank was salaried in all cases. As the business of the rural banks has increased and the duties of the officers increased, a system of paid officials has immediately replaced that of gratuitous services.

Considerable emphasis is also laid on the fact that in the Raiffeisen banks there is no distribution of dividends. In the beginning, however, there were no shares issued, and in fact, not until 1876 when it was necessary to do so to comply with the Imperial law. By not issuing shares, Raiffeisen sought to avoid any chances of capitalistic speculation, and when obliged to issue shares to comply with the law that required all co-operative societies to have foundation capital, he sought to evade it as far as possible and fixed the shares at a maximum value of ten marks. In 1909 the average paid-up capital per member amounted to only nineteen marks; less than $5.

The profits from he business are carried to a permanent reserve fund that cannot be distributed, but in some cases the paid-up stock is allowed a dividend, not to exceed the maximum rate of interest charged to borrowers. In 1909 the net profits of the rural banks in Germany were more than 7,000,000 marks, of which only a small fraction was distributed as dividends, which in no case exceeded 4 per cent of the paid-up shares, and in many cases no dividends at all were distributed. In this way the banks are continually strengthening their financial position and emphasizing the fact that their primary object is to supply credit to their members on the most favorable terms possible, and not to make a commercial profit on their business.—[By Prof. H. C. Price in Ohio Bulletin.

SAVING THE BIRDS.

To the Editor of The Homestead:

I noticed a recent article in your paper entitled "Slaughtering Useful Birds" wherein it is stated that we are losing an immense fortune through the loss of these birds and says further that they are slaughtered to satisfy the passions of the hunter.

While this is true to some extent I wish to say a few words which to my certain knowledge will explain the destruction of the birds to a large extent. "The crows and bluejays are mostly responsible for their disappearance. If the government would give a bounty of twenty-five or fifty cents a head for crows they would be doing more good to the farmer than all other protection they now give him. All the crow is good for is to pull corn when it is planted and rob the little birds of their eggs and young, until the corn has matured quite good size ears when they strip the husks down and spoil it.

Not a single bird is killed by hunters on my 160-acre farm if I know it except the English sparrows, bluejays and crows. The crow kills and robs the ground birds and the bluebirds, and the bluejay robs the thrush and robin and all other brush birds while the sparrow drives away the swallow, martin and pheobe. When the government gives a bounty for the afore-mentioned robbers they will be on the road to save our song birds, but the crow is the worst of all and the sooner a bounty is placed on his head the better.

Carl A. Wendler.

"Can't Sag" Gates Save You BIG MONEY

Cost only one-third as much as ordinary iron, wire or gas pipe gates, but last twice as long. Neat in appearance—best and strongest gate made—light, easy to handle, opens both ways. Boards are double *bolted* between eight angle steel uprights and double truss braces. *guaranteed never to sag.*

Cost Less Than All Wood Gates—Last 5 Times as Long

Can't Sag Gates are furnished complete, ready to hang, or just the Gate Steels which include everything except the boards. Patent self-locking hinge feature—reinforced two piece malleable hinges. Six Triangular Truss Braces make gates extra strong.

Improved Elevating Attachment permits the gate to be raised full length from 5 to 30 inches, so small stock can pass under, and to swing over snow.

30 Days Free Trial and 5 Year Guarantee

Catalog shows both complete Gates and just the Steels, at prices you can't afford to miss. Send for my new catalog with free 30 days' trial and *freight prepaid offer.*

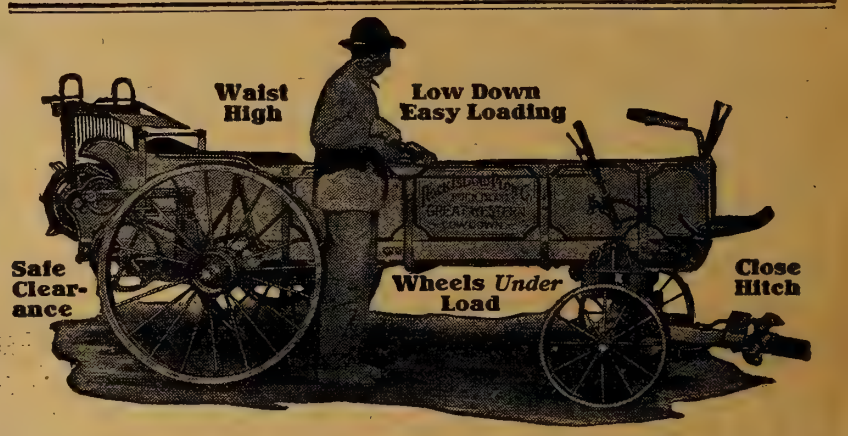
"Can't Sag" Gates & Steels



How to Save the Most Money

On Your Manure Spreader

Buy the best to begin with! That's it—the *best*—regardless of first price! The *cheaper* the spreader, the *more expensive* it is in the end. Get the spreader that thousands have proved, in over twelve years' use, the biggest money-saver and money-maker. The Spreader that has stood every test is now made *low down* for easy loading—the kind you'll buy sooner or later. Buy it now!

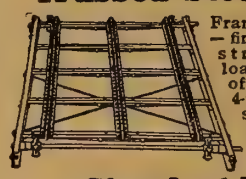
The Proved Spreader—It's Special Features

Low Down—Waist High—Safe Clearance—Short Wheel Base—Wheels Under Load—Roller Bearings—Lightest Draft—Simplest Drive—Avoids all Trouble of Enclosed Gears—Most Durable Beater—Trussed Steel Frame—Indestructible Front—Perfect Construction.

LIGHT DRAFT—LOW DOWN

Great Western

Trussed Steel Frame



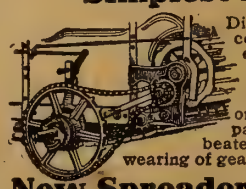
Frames of trussed steel—firmly braced—great strength. Weight of load, beater and force of operation all on the 4-inch steel sills. Can't sag, spring or give; 102 rollers to carry endless apron.

Front Won't Pull Out

Double heavy oak bolster—16-inch fifth wheel—every part extra strong.

GREAT WESTERN fronts *will not pull out.* They are built to stand the heaviest strains.

Simplest Drive



Direct chain drive—no complicated gears—everything in plain sight. The simplest, strongest, most sensible drive on any spreader. No parts in motion when beater is not in use—no wearing of gears or chains.

You Can Top Dress Corn

GREAT WESTERN rear wheels track with the front; you can straddle two corn rows for top dressing growing crops. This you can't do with narrow front trucks.

GREAT WESTERN means an easier pull—only two tracks across yards or fields.

New Spreader Book Free It is important that you learn all about this *old reliable* GREAT WESTERN in its new *low-down* form. Be sure to write at once for Free Book describing it in every detail and proving why it's best for you or any man. Get it now. Shows all the detail of this old reliable GREAT WESTERN now made *low down* for easy loading. The cuts and details prove why it's the one perfect spreader. It's the one spreader that will just suit you in every way.

Rock Island Plow Co., 184B 2nd Ave., Rock Island, Ill.

140 SHORT-HORNS AT PUBLIC SALE 140
CHICAGO, ILLINOIS, APRIL 3 AND 4, 1913

SAYER-STANTON

George J. Sayer, McHenry, Illinois, and Thomas Stanton, Wheaton, Illinois, sell

100 HEAD THURSDAY AND FRIDAY, APRIL 3, 4.

FIFTY head are listed by Mr. Sayer, and include a number of the get of the $10,000 bull, Prince Imperial; Glenbrook Sultan, one of the greatest sons of Whitehall Sultan; Leader of Fashion, the greatest breeding son of the champion, Whitehall Marshall; Whitehall Rosedale, by the champion, Avondale; Superbus, King Cumberland, and a lot of other good ones. Most of the females in Mr. Snyder's offering are bred to the champion, Roan Sultan.

Fifty head will be presented by MR. STANTON, the best offering that has yet been sent forward from Sittyton Grove Farm. They include the get of Masterpiece, a sire that has demonstrated his prepotency in the Sittyton Grove herd; Selection, by the champion Avondale, and himself an International champion; Ceremonious Archer, Glenbrook Sultan, and other top sires. Some outstanding bulls are included in this sale. Mr. Stanton is the owner of two great herd bulls, Masterpiece, by Cumberland's Last, and Browndale Sultan, by Avondale. He can dispose of one of these, and has decided to offer the choice at the sale. This is the bull opportunity of the year.

Get the catalog, and arrange to attend the sale. Mention The Homestead and address,

THOS. STANTON, WHEATON, ILL.

D. R. HANNA

D. R. Hanna, Cottage Hill Farm, Ravenna, Ohio, will sell

40 HEAD FRIDAY, APRIL 4

THIS is a select offering of well bred females and bulls, and includes a number of show propositions by VILLAGER, the sire that is making such a great reputation at the head of the Cottage Hill Farm herd. TEN BULLS are listed, six of them by Villager and four by his son, Village King. Last year Villager had a strong showing in the big rings, having to his credit the undefeated calf herd, young herd, senior and junior heifer calves, a record never before achieved by any sire of any breed. The sire of Villager, Village Beau, is the greatest sire of show stuff in Great Britian today, and Villager is bound to rank among the greatest Short-horn sires in this country.

All the females in this sale are either by Villager or one of his sons, or are bred to Villager, Village King or the sensational Village Denmark, so that no matter what you buy you are bound to get some of this prepotent blood. Attend this sale. The cattle are right in every way, and it is the opportunity to secure some of the blood of a bull that is destined to rank with the great Short-horn sires. Write today for the catalog, and arrange to be on hand April 4. Mention The Homestead and address,

JOHN GARDEN, RAVENNA, OHIO

Cols. Woods, Jones and Reppert, Auctioneers. These sales follow that of Anoka Farms, Waukesha, Wisconsin, April 2d.

BELGIUM AND FRANCE

ON the 15th of April I will sail for Belgium and France where I will visit the horse producing districts and select an importation of Belgian and Percheron stallions and mares direct from the farms on which they are raised.

I Solicit Commissions to Buy

I will be glad to purchase animals of either breed for anyone who will commission me to do so, guaranteeing conscientious selection, fair treatment and reasonable terms. Those interested should write me at once, at my home address, as I sail from New York on the date above mentioned.

PERCHERONS Imported and home-bred stallions and mares from $200 to $500 each. H. REDENIUS, - Rushmore, Minn.

Frank Iams' Draft Stallions and Mares

are "up to the minute." They are the "drafty, big-boned type"—"nifty, big black boys"—the real "medal winners"—sensational "show and business horses" of note, "ripe peaches." Big, classy "peaches and cream" "black boys." The "Iams brand" of "top notchers." Iams' importation of Percheron and Belgian stallions and mares are in the "pink of condition" and ready for a "good selling." "Ikey boy," smile sweetly, and hundreds of Iams' satisfied customers "will sit up and take notice" that Iams, the "king pin" horse importer, is still "doing business" at the "old stand." Iams is "pushing" his horses to the front. The big "peaches and cream" "boys and girls" are attractions that can't be overlooked. Iams mesmerizes buyers with "real drafters" at "bargain prices" and having the "horses as advertised." Iams' "competitors" and "hammer knockers" are "boosting Iams" by their "knocks," until now he is known as the "millionaire horseman," and on "Easy Street," and growing fast. Ikey, "buzz around" and sing Iams' song. He is selling these "aristocratic," fancy "black boys" cheaper than ever—or better horses for less money—$1,000 and $1,400 (few little higher). Iams has

"Ikey Buyer." Be a "Wise Guy"—Buy "Show Horses" of Iams—who has crossed the Ocean 50 times for horses and sold 5,444 Registered Horses, "Iams' 31 years of success" make him a safe man to buy from at Special Low Democratic Prices. "Everybody's Doin' It.

80 PERCHERON AND BELGIAN STALLIONS AND MARES 80

They are "model drafters." They are 2 to 5 years old, weigh 1,700 to 2,500 pounds, 80 per cent blacks, 50 per cent ton horses. All "registered," approved and inspected by governments of France and U. S. and certificates "stamped O. K." Iams gives a "certificate of soundness and health" with each horse—signed by a "Nebraska State Deputy U. S." Many Paris "prize winners" and "gold medal horses." Big, drafty "top-notchers," with big bone, quality, style, finish and action to burn. They are "eye openers"—larger and better horses than seen elsewhere. Big "business propositions" that make "the wheels work fast" under a "buyer's hat." "Georgie, dear," Iams made a "big killing" by buying his horses in Europe. "War scare," "bad crops," "close money" and "Iams' cash" caused the "prize winners" and "tops" to be thrown on the market for a "good selling."—Iams "cut the melon" and bought the "rippers" at "knockout prices." Iams will give his customers the benefit of his "good buy." "Ikey boy," come on down town"—see Iams—"Everybody is Doing It."

Get into Iams' "get rich wagon" and save $1,000 on a "top stallion"

(and you wear the diamonds). Iams is a "big fly in the jelly" in the horse world. "He keeps the gang guessing." Iams sells "imported horses only"—(they win 90 per cent of prizes at big horse shows). No "American-bred full bloods"—no "auction stuff" or "peddlers' horses"—only "choice drafters" of big size, bone, quality and finish. Iams has the "crack stallions and mares" you "read about." Buy horses of Iams and you won't "get stung" in horse or price. "Dolly D.," waltz me around once again, "Ikey," land me at Iams' box office and importing barns. Full to "the roof" with "black boys" (and all must be sold). Reduced prices. All the world knows Iams and his "peaches and cream" horses. 1913 promises to be a bumper year to Iams and his customers. He saved $300,000 to stallion buyers in 1912. Watch "Iams' smoke." Iams' 31 years of successful business make him a safe man to do business with. Iams sells horses "on honor." A boy or a lady can buy as cheap as a man. Iams' 1913 horse

Catalog is an "eye opener." It has a "laugh" and a $1,000

bargain in every line. A "bunch of gold" to stallion and mare buyers. It is full of the real "peaches and cream" stallions. It is the finest, most elaborate and original up-to-date horse book in the world. Iams, the "square deal" horseman, makes every statement in ad or catalog good—or you get the $500 he hangs up. Iams guarantees to sell you a better

Imported Stallion at $1,000 and $1,400

(few higher) than are sold to stock companies for $4,000. Imported mares, $700 and $1,000. Iams gives 60 per cent breeding guarantee; pays freight on horse and fare of one buyer. He can furnish $1,500 insurance. Iams buys and sells every stallion himself. Saves buyers $1,000 in middlemen's profits. He buys stallions by "train load." He speaks languages—(saving 20 per cent). He is not in the "stallion trust." No partners to share profits. He "pays cash" for his horses—and sells "topnotchers" by "hot advertising" and having "the goods." "Big Ikey," leave your "happy" home and buy a "top" stallion or pair of imported mares (of Iams) that bring colts that sell at $500 each. "Papa," don't let those "auction men" "hand you a lemon" in one of those "so-called" "American full bloods" of questionable breeding. Buy an imported horse of Iams, the "reliable horseman." (Then we will "all wear diamonds.") Iams' "selling clothes" fit all buyers. Write for Iams' million-dollar horse catalog. Iams won't let you go without a peaches and cream stallion or mare. "He sells the horses." Iams' guarantees are backed by "half million dollars." References—1st Nat'l and Omaha Nat'l Banks, Omaha; Packers Nat'l Bank, So. Omaha; Citizens State, 1st State and St. Paul State Banks, St. Paul, Neb. Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

ST. PAUL, NEBRASKA

OUR FIFTH ANNUAL

30-Day Sale Starts March 1st

THE offering consists of a choice selection of imported and American-bred Percheron and Shire stallions and mares. We were never better equipped to furnish the most discriminating buyers with first-class stallions than we are at present. Our horses were imported last October. Are perfectly acclimated, are two and three years old, all dark colors, weighing from 1,800 to 2,200 pounds. The mares are of the large brood type of serviceable age and are in foal. We give our customers fresh, clean, sound horses each year. They are not stale from overfitting. They are the right type with plenty of size and bone. We sell our horses at prices any farmer can pay. We have a large assortment to select from. Every animal guaranteed sound and a satisfactory breeder. If you want the best at prices that defy competition do not fail to visit us before buying elsewhere. We have a few good aged horses that have been replaced with two year olds, sound and good breeders, that will be sold very cheap. Terms to suit any one. Come and see us or write today for full particulars. Homewood is conveniently located 23 miles south of Chicago on Big Four and I. C. R. R., with trains to and from the city every hour. Barns near station. Bell phone, Homewood 58 W. Address

Get Your Cream Separator NOW

Most Women Prefer the New Butterfly

Only $2 DOWN

One Year To Pay

Here is the opportunity you have been waiting for—a chance to get one of these big-capacity, light-running, easy-cleaning, close-skimming New Butterfly Cream Separators without taking the money out of your pocket.

By paying only $2 down, you can get the biggest machine we make, use it 30 days free, then if you decide to keep it pay us the rest of our low factory-to-farm price (only $24 and up) in small, easy installments. You can make these payments monthly out of the extra cream profits which the machine will save for you. You buy direct from the manufacturer and save half. You try the machine 30 days on your own farm before you decide to keep it. You get a signed lifetime guarantee. You have the benefit of this great labor-saving machine while it is earning its own cost and more. You don't risk a single penny. We pay the freight both ways if the separator fails to please you. Get your separator NOW at factory prices and on terms so easy you won't feel the cost at all.

New Butterfly Cream Separators

will make you $10 to $15 a year more profit from every cow you own. They are handsome, high-grade, durable machines. The most modern and convenient separator you can buy. No other separator costs more to make, has so many patented improvements or gives you as much value for your money. We will prove this on your own farm, or no sale. Thousands are in daily use all over the United States. Read the letter at right.

Davenport, Iowa.

Dear Sirs: I like the separator; I think it is a daisy. It certainly is everything you claim it to be. I would not exchange it for any other separator, regardless of make or price. The——, which I am shipping you today, took all the strength a man had to run, but my little 8-year-old boy can run this one easily. It skims perfectly clean, and is so easy to wash.

EDWARD SCHMIDT.

K-R-I-T

Are you a "K-r-i-t-Farmer"?

If you are not, we will send the K-r-i-t out to your farm and show you why you should be a "K-r-i-t Farmer."

You show us what you want a motor car to do. Show us your roads, your hills, your mud, your sand and the cost you can afford for up-keep, and we'll show you the car that can do it. It is the K-r-i-t.

Four thousand farmers are driving K-r-i-t-s. We want to show you why they bought K-r-i-t-s. We want you to ask them how they like their K-r-i-t-s. We'll put you in touch with them. Write us for names and addresses of K-r-i-t—farmers.

We know why they bought K-r-i-t-s. The three dominant reasons are—The K-r-i-t Motor, the K-r-i-t Transmission, the K-r-i-t Axle. Those are the Three Prime Essentials of the car that is Sturdy, Reliable, Durable and Economical.

The K-r-i-t has the ball-bearing unit powerplant; four-cylinder water-cooled motor, cylinder cast enbloc of the highest quality grey iron casting. The K-r-i-t has the annular ball-bearing sliding-gear transmission with chome nickel gears.

The K-r-i-t has axle and springs made of Vanadium Steel and steering arms of Chrome Vanadium. The K-r-i-t in every essential part has more durability, more construction strength, more power, more real sturdiness than a car of its rating actually needs. But that is what has lifted the K-r-i-t out of the $1000 class. That is why four thousand farmers are driving K-r-i-t-s.

Write us for the name of the nearest K-r-i-t dealer and he will bring the K-r-i-t to your farm.

Slashing Offer on Harrows and Harrow Carts

I am making the most startling, the most amazing price slashing offer ever made on harrows and harrow carts. Write me at once—or order right direct from the amazingly low prices given here—act quick. Sold on 30 days' approval test. Backed by ***$25,000 bond.***

Get My Big FREE Book Now

Galloway's Prices Are Lower Than Dealers Pay in Car Load Lots

Yes, Sir,—I will sell you a genuine Galloway Guaranteed New All Steel High Wheel Harrow Cart for $5.50, and a Galloway Guaranteed All Steel Flexible Lever Harrow as low as $11.00—both for $16.25—less than your dealer would have to pay for inferior articles in car load lots! Last year we sold thousands of these carts and harrows. This year we are going to sell three where we sold one before. The price will do it. Here is your chance—act quick.

My Particular Hobby

This Galloway Harrow Cart is a pet of mine. I made my start with Harrow Carts—sold 4,400 the first year, 7,200 the second year and have been selling thousands every year since at prices that smashed all competition.

My All Steel Harrow Cart is different—original—with special patented features that put it in a class by itself. It will successfully follow any harrow without interferring with levers and sections, and at the same time will turn perfectly without changing position of driver in seat. It is closely connected to the harrow and has high spring seat that raises operator up out of the dust. Heavy steel angles; axles have oscillating arms made of solid steel bars; dust proof boxes.

Prices F. O. B. Waterloo or Kansas City

N1993—New High Wheel Harrow Cart, 30-in. wheels: dust proof boxes; weight, 80 lbs.; price..... **$5.50**

N1994—New High Wheel Harrow Cart, 38-in. wheels; dust proof boxes: weight, 85 lbs.; price..... **$6.25**

You can't afford to walk behind a harrow, when you consider the saving in time and shoe leather my Harrow Cart makes you. It means at least one hour a day besides the greatest saving in labor for the money ever offered a farmer.

World's Greatest Harrow

Since developing my Harrow Cart, I have perfected Galloway's New All Steel Flexible Harrow—the only harrow made that can be adjusted with levers. For years when I traveled on the road I sold a wooden flexible harrow to dealers and it was a good one, but it didn't have any levers. It was not adjustable. It was wooden, which naturally in time, exposed to the weather and elements, would soon give out and warp out of place. I sold these harrows at wholesale to dealers at $1.00 per foot. I am now selling my new Galloway All Steel Flexible Harrow direct to the farmer for less money than they used to pay for the old style wooden harrows.

Some Special Features

On account of its flexibility, the teeth of this harrow go down into the hollow places, follow close to the ground, go into all the low places and over the ridges without skipping a foot of space. Each section and each bar is entirely independent of the other; no side motion, no danger of one section riding on the other. With the teeth slanting back, this harrow is ready for corn stalk ground, smoothing or weeding grain ground, etc. When teeth are straight up it is ready for pulverizing fall plowing, and on account of the oscillating movement the teeth dig and tear up the ground similar to a cultivator.

Harrow Prices F.O.B. Waterloo and Kansas City

N5065—2 Section Harrow (80 teeth); Width, 11 cut ft.; Weight, 198 lbs.; price..... **$11.00**

N5066—3 Section Harrow (120 teeth); Width, 16½ cut ft.; Weight, 305 lbs.; price..... **$16.50**

N5067—4 Section Harrow (160 teeth): Width, 22 cut ft.; Weight, 432 lbs.; price..... **$22.00**

Special Combination Prices

If you order one of these New Harrow Carts and New All Steel Flexible Lever Harrows together, we will make you the following special combination prices F. O. B. Waterloo factory or Kansas City.

N1868—30-in. Cart and 2-section Harrow....**$16.25**
N1869—30-in. Cart and 3-section Harrow.... **21.60**
N1870—30-in. Cart and 4-section Harrow.. **26.95**
N1878—38-in. Cart and 2-section Harrow.... **16.75**
N1879—38-in. Cart and 3-section Harrow.... **22.00**
N1880—38-in. Cart and 4-section Harrow.... **27.45**

I would like to see one of these High Wheel Harrow Carts and All Steel Flexible Lever Harrows on every farm in this country. You can safely order direct from this announcement, or if you prefer I will send you

DES MOINES, IOWA, THURSDAY, APRIL 3, 1913.

One Year of the Farm Adviser

What Pettis County, Mo., Has Accomplished in Less Than Twelve Months Under the Leadership of "Sam" Jordan and How the Record Serves as an Inspiration to the Entire Grain Belt.

SIX hundred men and women, mainly from the farm, sat down together at banquet tables which literally groaned with good things to eat. At the speakers' table sat the leading jack breeder of the country, a man, who, starting with only a jackknife as his capital, is now the owner of many hundreds of acres of fertile Missouri land and herds unsurpassed in the country. By his side sat a slight, semi-deaf man, fifty years of age, born in a log cabin in Missouri, who has come to be recognized as the seed corn expert of a great state, who interested 7,000 boys in a state-wide corn growing contest, who has left a field, the bounds of which were the confines of the state, to devote all his time and energy to one single county, realizing that the state-wide and nation-wide wealth depend upon individual efforts and success. With these two men sat the former immigration commissioner of the state, now a specialist in the gentle art of boosting, who is devoting his time and energy to exploiting to the world the advantages of the county and town in which he lives. The occasion was the first annual "Get-Together" meeting and banquet of the Pettis county, Missouri, Bureau of Agriculture. The three men were Louis Monsees, Prof. S. M. Jordan (better known as Sam Jordan, Missouri seed corn man) and M. V. Carroll, secretary of the Sedalia Booster Club.

"SAM" JORDAN ADDRESSING A DISTRICT TEACHERS' MEETING INTERESTING ALL IN THE GREATER POSSIBILITIES OF THE RURAL SCHOOL.

With approximately 100 counties in the country taking advantage of the opportunity to employ a farm adviser and with no less than nine counties in the state of Missouri alone carrying on this new work, the credit of being the first county to take up the movement unaided, and to go farther than any other county in the work accomplished, belongs to Pettis county, Missouri. It is less than twelve months since Professor Jordan was induced temporarily to leave his post at the state college of agriculture and devote all his time and energy to solving the multitude of problems which beset the rank and file of the farmers of Pettis county, but in that short length of time miracles have been accomplished. With such a start, in so short a length of time, it is not absurd to predict that Pettis county will set the pace not only for all of Missouri, but for the greater part of the grain belt. At any rate the work which has been done stands as an object lesson for the emulation of other counties. Given the proper amount of enthusiasm and the necessary working fund, what has been accomplished by Sam Jordan in Pettis county may be duplicated in other counties of the grain belt.

It was at a farmers' institute held in Sedalia in March, 1912, that the movement was inaugurated. After hearing addresses by the institute lecturers sent out from Columbia, the question was asked, "Why not have these men for all the year instead of for a single day?" The conference which followed this question had not adjourned before the proposal was put point blank to Professor Jordan to leave his state field and concentrate his efforts in the one county. The matter was taken under consideration and when the details of salary had been arranged the contract was closed and work immediately begun. The fund with which to pay Professor Jordan his salary o $3,000 a year and the necessary running expenses was raised altogether, at first, without state or government aid. The county court, under the authority of the Nelson law, appropriated $1,500. The city school board, realizing that on the prosperity of the farmers depends the prosperity and the good work of the schools, met the situation by an appropriation of $600 a year, in return for which Professor Jordan gives two lectures each week on agriculture in the Sedalia high school. The balance of the fund was raised by private subscription from farmers and business men. Subsequently it was discovered that $1,000 a year aid could be had from the Crop Improvement Committee of the American Grain Exchanges, at Chicago, but the credit for starting the work unaided by outside money belongs altogether to the Pettis County Bureau.

One had only to engage any of the banqueters at Sedalia in conversation to find ample proof of the excellent work done the first year and of the value of the new movement. Two days of each week (Saturday and Monday) are office days with the farm adviser, but the balance of each week is spent by him in active field inspection and demonstration. The farm adviser, who, like Sam Jordan, is able to mix and to give good practical advice, finds his time well occupied. Visiting farms was the first call upon Professor Jordan and it was but a short time until his every hour was booked more than thirty days in advance. The short visits were ordinarily occupied in soil tests, the selection of experimental spots for the growing of alfalfa (in which Pettis county farmers are greatly interested), the location of the silo, the planning of the barn, the treatment of an orchard, the selection of additions to the herd, practical advice on the treatment of smut in oats or whether a crop of weeds had better be burned or plowed under, proper location for a well, testing of grain and grass seeds, advice upon practical farming and a hundred and one other matters of importance to the individual farmer and upon which his ultimate success or failure may depend. From these preliminary, casual visits grew the wider campaign for rallies and neighborhood meetings at the homes of the various farmers, with notice in advance so that all might attend ready to ask questions, to submit samples of grains and weeds and secure the greatest possible help from the farm adviser. As Professor Jordan remarks: "There is no limit to what can be done, the man's capacity is the measure." No better idea of what has been done in the past year in Pettis county, or what may confidently be expected in the future, can be had than from this report of Professor Jordan on the results of his first year's work:

"We found the soil acid, and means are being taken to treat all soils where alfalfa is expected to grow. The Bureau secured inquiries from twelve different states from apple buyers, and our farmers found a market for all marketable stuff. We found that buyers of clover and alfalfa seed

PETTIS COUNTY HAS REVIVED THE OLD STYLE HUSKING BEE, ADDING ANOTHER SOCIAL FACTOR TO THE ENJOYMENT OF EVERYBODY.

THE MESSAGE OF THE STORMS.

In common with thousands of others, my heart has been touched during the past week by the suffering wrought by unprecedented storms. Death has ridden on the wind and the wave. The heavy hand of sorrow has been laid upon the farmers of the grain belt and of the Ohio valley. Strong men have broken down in despair as they saw their loved ones torn from them. In the bereft farm homes women have stretched forth empty arms in the night or crooned over lifeless forms in mad despair and futile hope. Children have been launched on the world parentless, crying for food and drink, where plenty reigned in the granary of the world but the day before. The lamentations of stricken families have sounded above the moan of the wind and the roar of the waters. All this has touched my heart as has nothing in many years past.

In the misery and loss of the past week the farmer has sustained a large part. The week opened with a death-dealing cyclone which devastated portions of the choicest farming country in eastern Nebraska and western Iowa, tore its way eastward and southward, leaving destruction in its wake in the richest agricultural sections of central Illinois and southern Missouri. The day following, when it seemed to us who had been miraculously spared, as though nothing worse could possibly happen, torrential rains accompanied by the bursting of straining dikes, levees and reservoirs loosened a flood of angry waters which rushed over fertile fields, bustling towns and thriving cities throughout Ohio and Indiana. Our hearts bled as we read the awful tales of thousands upon thousands of men, women and children, on the farms and in the cities, crying for food and drink, shivering as the blasts of bitter weather whipped their light covering to shreds, shutting their eyes and stopping their ears to the sights and sounds of desolation settling down upon whole states. Herds were scattered and drowned, farm houses disappeared in the swirling floods as the angry waters poured with whirlwind speed over farms which had been the pride and glory of the state and nation but the day before. As one story followed another, the awful tale gathering intensity as it proceeded, the week brought to me such mingled emotions of sorrow and sympathy as no other disaster of recent years has occasioned. There were many I loved and held most dear imperiled by the angry waters; farmers in whose homes I had visited; men whom I loved as brothers; little children in whose future I had planned; in the twinkling of an eye their lives were at stake in the maelstrom of the storm.

It has been a week when no man knew what horror the next moment might disclose. It has been a week, however, when there flowed through the land a stream which cannot be dammed, a stream deep as life itself, broad as all human endeavor, a stream full of the life-giving milk of human kindness. If it has been a week of misery, it has been likewise a week of charity, of the tearing down of the frowning walls of reserve, of the burning away of all barriers, of the opening of hearts to that greatest of all impulses: Brotherly love. Those who have escaped the visitations of death have given of their store freely. Even those who have suffered have divided their little hoard of supplies, that all might be nourished. Across swollen floods and places laid bare and waste by the winds men have clasped hands and gone forth, with uplifted heads and shining faces, to rebuild that which had been destroyed, to succor the helpless, comfort the fallen and sustain the stricken. Not in many years has there been such visible manifestation of the brotherliness of Americans, the common impulse to lend a helping hand to the weak and needy.

To the farmer mourning for his lost home and herds, crazed by the knowledge that loved ones have perished or maddened by the uncertainty of fearful suspense, there is little that we who were spared can say or do to alleviate his anguish. And yet my heart is so full that I must need find relief by giving what articulation I can to my sorrow and sympathy. I want every stricken farmer to know that there is not a moment of his suffering when the great heart of humanity has not sorrowed with him; that there is not a pain which has not brought a responsive tug at the heart-strings of the more fortunate who have escaped; that there is not a tear which has not transmuted the baser metal of some man's heart into the refined gold of friendship and sympathy. I want him to remember that while in the midst of life we are in death, still throughout all of death there is life everlasting. The message of the floods and the storms is just this: In the twinkling of an eye prosperity and happiness may be transformed into adversity and sorrow, but when trouble comes the hand of fellowship and the solace of loving assistance come, too; men are brought closer together, for the common good in the future, through suffering and sorrow; and the day is brought that much nearer when, as the poet sang:

The war drum throbbed no longer and
the battle flags were furled
In the Parliament of Man, the Federation of the World.

In the anticipation of such a day we clasp hands with the bereaved and march on together toward the better, bigger, braver life, just over the next hilltop.

JAMES M. PIERCE,
Publisher The Iowa Homestead.

THE PASTURES NEED ATTENTION

Those who have had an opportunity to study agriculture in European countries are quick to observe the great difference in the productiveness of pastures in those countries and the grass lands, for example, of the corn belt. With conditions no more favorable for the growth of clovers and grasses than they are here it is not an uncommon thing to find the acre carrying even three times the amount of live stock that the average farmer here is able to maintain. It is therefore high time that some attention should be given to increasing productiveness of the pasture land. A Kansas subscriber who claims that he has given some thought to this matter writes as follows:

Our pastures do not afford over 40 or 50 per cent of the grass that they are capable of supplying. In other words, one-half the land now in pasture, properly cared for, would support as much stock as our pastures now afford. The case might be stated—"One-half our pasture land is wasted." The price of land and live stock are so high that it seems that our pastures ought to be so handled as to cause the growth of as much grass as possible, so that in turn we could raise as much stock as the land will support. Until we are doing this we cannot claim to be farming extensively. This is the year to begin favoring farming our pastures. There are many bare spots in the pastures where grass would do well, were it only started. These spots will grow weeds if you do nothing for it. In fact, this is the reason why weeds are such a pest in our pastures—every rich spot that is not growing grass will produce a large growth of weeds. The farmer will never free his pastures from weeds until he systematically farms his pastures.

Get grass seed best suited to your local conditions, and scatter over the thin and bare places. Thoroughly disk all the pastures as soon as possible in the spring after the frost leaves the ground. Set the disks so as to cut the sod and the sod-bound roots will be torn apart and distributed more evenly over the pasture. The lumps of manure will be reduced and scattered so as to be more available.

This disking will cover the grass seed you have sown and it will grow. Disking will aerate the soil, sunlight and air will penetrate the soil, and the grass will respond quickly. If time permits, disk the ground the second time, going in the opposite direction, following up with a smoothing harrow.

Keep the stock off the soil until the moisture has settled and the grass has well started. Up to this time the grass has little feeding value and much harm is done the pastures by the tramping of stock.

By following the above the grass in the pasture will easily be doubled. The writer has tried this for years, and considers it the cheapest method of getting all the grass the land can afford. If the weeds come on, cut them before the seeds ripen, and in a few years you will have a "reasonably clean" pasture, that furnishes much grass and live stock. Manure scattered thinly on the pastures when you cannot get into the fields is also good for the grass.

Not only should attention be given to the bare spots in pasture lands, but we must realize the fact that even when there is a good stand of grass the amount of pasturage furnished is frequently insufficient to make the grass land really profitable. They need cutting up with the disk also because the surface sod is apt to become root bound. So much the better if a little clover seed can be scattered previous to disking. This will add variety to the pasture and as the clover roots decay the surface soil will be enriched. Where the disk is used the work should be done early in the spring before the soil gets too firm, otherwise but little can be accomplished by one or two diskings. No matter how sharp the disk may be nor how much the surface is torn up there need be no fear about killing the grass and as a matter of fact that is just the kind of treatment that is needed on many of our pastures to thicken them up and to stimulate a new growth.

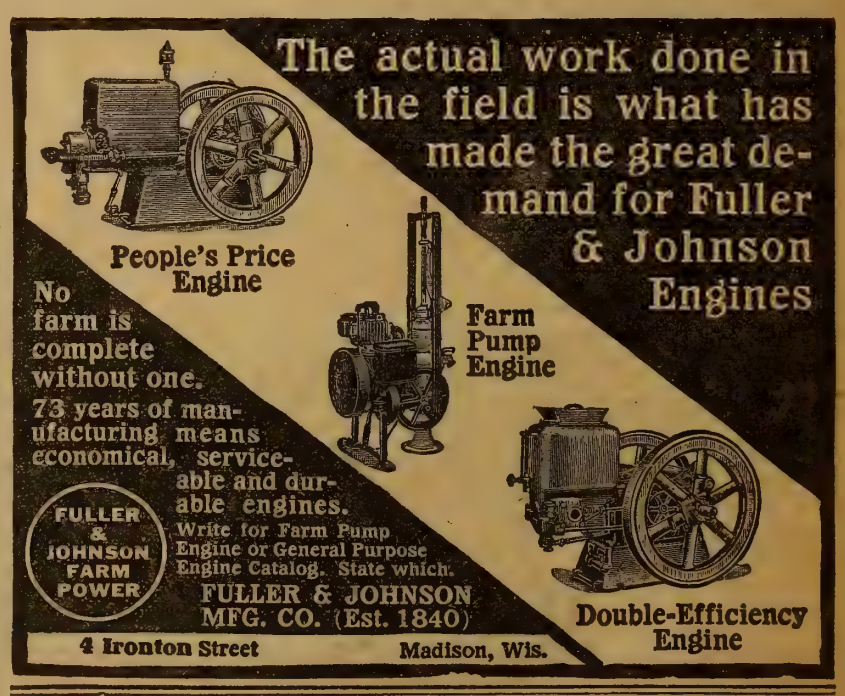
J. PIERPONT MORGAN DIES

J. Pierpont Morgan, one of the wealthiest men America has ever produced and quite generally recognized as the financial dictator of this country for some years past, died in Rome, Italy, last Monday afternoon, in his seventy-sixth year. The immense power which he wielded may be somewhat realized when it is stated that at one time he is said to have controlled eight billion dollars. Other men in the world's history have been richer, but it is doubtful if any man was ever the manipulator of so fabulous a sum, for Mr. Morgan not only controlled his own finances, but was the head of a powerful body or clique of financiers on whose word and will the great rulers of the world waited. In addition to being a master financier and captain of industry, Mr. Morgan was a patron of the finer arts, his collection of paintings, rare pieces of statuary and other relics being one of the most valuable in the world. In the midst of that which was to him the greatest of all games, the making of money, he found time to cultivate the finer graces and enrich the less fortunate by gathering together the world's masterpieces of art and literature.

During his lifetime Mr. Morgan was a much-maligned man. It was the penalty of his phenomenal success. That he deserved great measure of success for saving the country from the impending panic in 1907 is not to be denied. It was the farmer's money in the small banks of the middle West, the grain belt, which poured into New York and held back the panic that was crashing down upon the nation, but it was the confidence which Pierpont Morgan inspired and the genius which he manifested in critical times which made this yellow flood of gold from the middle West so effective. Mr. Morgan's greatest feat, so far as the general public is concerned, was the successful organization of the United States Steel Corporation. He was a financial giant, starting life with the advantage of a large inherited fortune, amounting to many millions. That American finance and commerce are in a splendidly sound and secure condition today was evidenced by the fact that the stock market was but slightly affected by his death.

For Sale, Boy Proof Watches

A SPLENDID timekeeper for any one, stem wind and stem set, finished in either nickel or gunmetal. Guaranteed and sent on approval to any address for only $1.50 postpaid. S. W. Harr, Watch Department, Riverside, Iowa.



INCREASING THE CATTLE SUPPLY BY LEGISLATION.

The Central Short-horn Breeders' Association has recently petitioned the Missouri legislature to prevent the enactment of a law which proposes to prohibit the slaughter of heifer calves for a given number of years. It seems that an act of this character was first introduced in the Indiana legislature after being adopted by the National Live Stock Exchange at the June meeting of 1912.

In the petition referred to this act is denounced as an infringement on the right of the producer to realize gain from honest and legitimate toil, that the state which proposes to encourage thrift and the creation of wealth cannot consistently at the same time prohibit by legislation the full fruition of labor. In other words, it is contended in this petition that the state has no right to compel the farmer to hold his female produce any more than it has the authority to force him to sell any farm produce at any specified time.

It is pointed out that an act of this character if it became a law would be a distinct hardship on the farmer. In cases where there is a limited supply of capital it is often necessary to realize quickly on live stock in order to meet urgent needs and therefore the law should in no sense, according to this petition, restrict the farmer in the exercise of his own free will. It is pointed out that instead of increasing the supply at some future period this act would work in the very opposite direction by restricting breeding operations.

A law of this character if enforced would result in withholding 35 per cent of the present beef supply from consumptive channels because this percentage of the animals marketed at the present time are females. The motive of the national organization of commission men which is behind the movement to prevent the slaughter of female cattle is impugned by this organization of Short-horn breeders, it being pointed out that it is an ill-timed attempt to augment the income of the members of the commission at the central markets, but that as a matter of fact the practical result of this kind of legislation, would it is claimed, as stated before, reduce the number of cattle and in the meantime work an untold hardship on producer.

THICKENING THE STAND OF ALFALFA

Sympathy will not help an alfalfa crop, but we do sympathize with the man who is struggling to thicken up a thin stand of alfalfa. One of our subscribers, Mr. Henry Saak, is in the throes at the present time and he asks for information that will help him out of his wilderness of difficulty. In this case the crop was seeded last fall and it is about half a stand, though the plants that are there do not appear vigorous. The problem therefore is to know whether to plow up the crop and start over again or, on the other hand, is it practicable to supplement the stand that is already there?

We are not very favorably inclined to the practice of supplementing a thin alfalfa crop. In this case, however, the alfalfa has been newly seeded and the difficulty is not so great as if it were an old alfalfa field that had to be dealt with. Where a good half stand exists we believe that it is a safe speculation to add six or seven pounds of seed per acre early this spring, at which time the surface should be freely harrowed. The harrowing will do no harm to the plants that are already there and, on the other hand, it will cover these seed, thereby making it possible for the crop to start quickly.

The one risk that must be run in carrying out this plan is due to the fact that annual weed seeds will take possession of the ground that should be occupied by the newly seeded alfalfa. However, if the ground is fairly clean there may not be much opposition, in which case there is every reason to believe that the plan outlined will result in making a fairly good stand.

In the case of an old alfalfa field that is gradually growing bald, as it were, the best plan in the long run is to plow it up, trusting to the old alfalfa as having inoculated the soil and try it all over again, making doubly sure that the seed bed is well prepared, that the seed is good and that it is sown early enough in the fall to insure a good growth before the ground freezes.

THE FARMERS' PUBLIC LAUNDRY A SUCCESS.

That co-operation is right in principle in many farm affairs is again attested to by the success that has been attained in the operation of a co-operative laundry. A Minnesota institution, although it has been running but three months, has during that time relieved the households of this arduous task at a cost of less than one dollar per family per week.

The plan has been carried out in connection with the Chatfield Co-operative Creamery. Profits in this concern were allowed to accumulate until the sum of $2,000 was available in the fall of 1912. Farmer and village folks to the number of 224 families agreed to have their washing done at the new laundry and to carry out the project $2,500 of stock was subscribed in amounts varying from $5 to $25. At a cost of $4,500 a building was erected and equipment installed so that the amount of stock taken together with the $2,000 on hand meant that a beginning was made free of debt. One boiler supplied heat, power and steam and the exhaust from the engine used in the drying room. In addition to the superintendent five persons are employed at wages ranging from fifteen to twenty cents per hour. The basis for fixing prices for laundry work is five cents per pound, this sum being charged for rough dried, flat work and underwear, while ironing is charged at fifteen cents an hour. It has been found after the end of a three months' period that the laundry of village folks amounted to 90.7 cents per family and for farmers 97.9 cents a week. We cannot see why the principle involved in this is not sound. Farm laundry work even with the best of equipment involves the heaviest kind of toil. It is seldom possible for one person to complete the task in a day. On an average we believe that it would require at least two days for one person so that on a basis of $1 per week for having labor done outside the home a real economy is effected, saying nothing of the conservation of strength that it means for those on whom housekeeping duties already sit none too lightly.

We are pleased to pass the word along as to the success the plan has attained in Minnesota, hoping that the plan may be ultimately worked out in those localities where the co-operative principle meets the practical endorsement of the people.

HARROWING THE NEW MEADOW

Throughout a considerable part of the corn belt conditions for new meadows have been reasonably favorable during the winter months. Where the growth was thick last fall there is every indication at the present time that no supplementary seed will be required. In those cases where the meadows are thin it might be difficult in some cases to determine whether they should be plowed up or a little additional seed used. Timothy seed is relatively cheap and because of this where there is doubt about the stand being sufficient to make a good crop the sowing of a quart or two of timothy is to be strongly recommended.

Whether any seed is used or not there are many meadows that can be harrowed to very great advantage. The crust that is always left on the surface after the period of frosts is more or less unfavorable to rapid growth and to the spread of such plants as have previously been established. For this reason one or two harrowings will have an exceedingly beneficial effect. The breaking up of the crust will tend to aerate the soil thus making conditions more favorable for the rapid development of the clover and timothy plants. It will conserve moisture and this of itself will more than justify the expenditure of the amount of labor required in case the spring should be a dry one.

Good sense must be used in adjusting the harrow and the condition of the soil must decide whether the teeth are to be run straight or slanting backwards. In any case the aim should be to produce a light mulch without unduly tearing out the clover or grass plants. This work should not be done while the soil is soft because more harm than good can be accomplished when the horses sink in above their fetlocks. As a matter of fact harrowing should not be done at all until the soil is firm enough so that no damage whatever results from tramping.

NOT RESPONSIBLE FOR PRICES.

Proof positive that it is the distributer or middleman who is responsible for the high price of farm products when they sell in the city, rather than the farmer, is found in the result of a canvass made on the milk situation in Rochester, New York. It was found not only that the large number of rival milk wagons made the city consumer pay a price altogether out of reason when the sum which the farmer receives is considered, but also that the unnecessary duplication of milk wagons was responsible for the impure quality of milk served. Here is the result as told by a writer in a recent magazine:

Altogether too many dealers are engaged in distributing milk, with the results that twice as much money and twice as many men and horses and wagons as are necessary are employed to perform this service. Of course, these facts mean that the dealers get less than a fair profit and cannot, therefore, be overly nice in the care and quality of their product. And they mean, too, that the consumers pay more than a fair price for milk—of an inferior grade.

For example, I found that in a section in which the most inhabitants were negroes, twenty-three distributors were traveling twenty miles daily to supply 165 homes which could be supplied by one distributor traveling only two miles. On an average, in each of four sections of American workingmen, forty-seven distributors were traveling thirty-eight miles to 431 homes, in every case a waste of more than forty men's work and twenty-five miles of travel. In each of four districts of foreign workingmen, forty-nine distributors were traveling thirty-seven miles to serve 317 homes which one dealer could supply in two and one-half miles of travel. Twenty-six distributors were traveling forty-eight miles to supply 443 homes of middle-class Americans, though one man could have performed the same service by traveling two and one-half miles. In each of five sections of well-to-do homes, twenty-three distributors were traveling twenty-two miles to perform a single distributor's service of traveling a little more than two miles to 173 homes.

A similar canvass is being undertaken in one of the large cities of the grain belt, with the prospects good of similar results. Nothing could more conclusively prove that the farmer is not responsible for the high price of living. The farmer receives approximately one cent out of every five paid by the consumer for a loaf of bread and yet the price of wheat is talked about as being one of the prime factors in the increase of living expenses in most of our cities. The fact is that the farmer can prove an alibi easily when it comes to an indictment for the present economic tendency of the times, but the middleman and the city distributor could not possibly escape so easily.

Dig Ditches With

DU PONT

RED CROSS

DYNAMITE

QUICKER and cheaper than the shovel method. Ditches from 50 feet upwards in length instantly excavated. One man does the work of many. No re-shovelling of dirt necessary.

For Collapsible Culvert Molds, Mixers, Buzz Saws and Power Washing Machines, Address Box 87, Dumont, Ia.

THE hailstorm cut at the head of this column is the trade-mark of the oldest, largest, strongest and most successful hail insurance association which ever did business in the state of Iowa.

FARMERS MUTUAL HAIL INSURANCE ASSOCIATION OF IOWA

We have repeatedly called attention to this organization and pointed to its splendid success in protecting the crops of its members from loss by hailstorms.

The first of January when the annual statement was filed with the Auditor of State this association had in force seven and three-fourths millions of dollars of insurance and cash in its treasury to the amount of $101,255.48. This splendid showing was made with an assessment of only $18.00 for a thousand dollars of insurance which is less than half of the stock rate.

The terrible Tornado and Hailstorms which have occurred in Iowa and adjoining states the past few days serve to emphasize the need of this kind of protection and call attention to this company. When solicited to take hail insurance if the literature shown you has the hailstorm cut on each piece and if it is at the top of the application you have the right company and need not hestitate. This company carries out its contracts and pays all its losses in full and liberally.

It stands out as an example of successful co-operation among farmers and should be recognized by them as a great help in times of trouble and misfortune. We do not hestitate to ask you to go fully into the record of this association as we are sure you will find everything right and the greatest list of losses paid of any association in the state.

5 Year Guaranteed Buggies At 1/2 Retail Price

$55.00 VALUE. PRICE $29.50

You take no risk when you buy a buggy from us. We guarantee it to please you, and to be a bigger value for your money than you can get anywhere else, or you needn't keep it. *Reference;* S. Ill. Natl. Bank, East St. Louis, Ill.

Mutual Buggies, Surreys, Wagons, etc., are the highest quality, handsomest, most stylish vehicles built. The only line guaranteed 5 years. We sell direct at prices—and save you $25.00 to $100.00. Write for catalog and delivered prices.

MAKE BIG MONEY PULLING STUMPS

Pull the stumps from your fields and replace them with big crops. Don't pay taxes on idle land.

The Hercules All Steel Triple Power Stump Puller

pulls an acre of stumps a day. Pulls biggest stump in 5 minutes. Guaranteed against breakage for 3 years. 30 days free trial. Send name for book, free—and special low-price offer. Address Hercules Mfg. Company, 941 21st St., Centerville, Iowa, U. S. A.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

The man who wants to know why his eight-year-old fruit trees do not bear can wrest an exceedingly small amount of reliable information on the subject from me, since I have some of the same kind, and, for the life of me, I don't know why they do not bear fruit.

Provide ample and snug shelter for the early pigs these chilly nights, but plan a sun bath for the little fellows every day. Without open air sunlight, no animal can do its best.

It does beat everything what a lot of things are bought each year with the egg money, to hear some women tell it. I sometimes feel ashamed of "us men" when I hear some of the stories told by certain women regarding the size and amount of their purchases, made wholly with the egg money.

As far as field work was concerned, the wages paid the hired man for the month of March drew very nearly a blank.

A day spent in taking the disk apart and cleaning out the oil holes and boxes with kerosene will mean easier work for the horses and more satisfaction to the driver. Not only the disk, but all the machinery should be thoroughly overhauled before the work season begins.

The idea that seed corn is almost perfect seems to be quite general this year. We hope this is true, but in order to be sure it might be a good plan to test at least a few ears before shelling.

The makers of gas tractors are trying their best to perfect a machine to take the place of the horse and to tell the truth they are doing quite well as far as the machine is concerned, but until a cheap substitute for gasoline can be found the breeder of draft horses does not need to worry much.

Letting things go usually results in folks being unable to make things go.

In this part of the country the single disk grain drill gives the best service because all the small grain is put in on cornstalk ground and very few care to rake and burn the stalks.

The farmer whose cows do not average 150 pounds of butter fat in a year should do some studying to find out whether the cause is with the cows or with the feeding, especially if he is a patron of a creamery and makes dairying a part of his business. Keeping cows at a loss will never build a barn.

Grain cleaners now do their work so well that there is no earthly excuse for planting or sowing a dose of weed seed. The best of us have weeds enough to contend with without sowing more.

A heavy jackknife with a sharp blade is the only tool needed for pruning young apple trees, but with older trees the saw and the pruning hook are sometimes needed. It does not matter much what tool is used, so a clean, smooth job is done.

What are you expecting from the orchard this season? Your efforts in putting it in a productive condition will answer that when the fruit crop is harvested.

A spring sign of a poor horseman: Letting his horses go for days at a time with the mud sticking to them that was splashed there while traveling on the roads or in the fields.

This is a most propitious time in which to brighten up the cultivator shovels, thus making sure that you are ready for the rush work that will swoop down upon us when the corn-plowing season opens up.

Somebody please tell us why a hog should be compelled to eat any filthier feed than the dairy cow or the horse. If no one can do it, most of us could turn a new leaf in the care of our swill barrels from which we feed the hogs.

Go carefully over the nuts and bolts of the carriage occasionally, especially those of the tongue, doubletrees and the shafts, to see that all are tight and in place. This may save you not only damage to the vehicle by their giving way while you are on the road, but it may avert a bad accident.

The well doesn't have to be situated very far from the house to make a walk of several dozen miles in a week for your wife in carrying her supply of water for house use. Measure the distance from the house to the well and you may find it time to provide a better way for the wife to secure her water supply.

Why not buy your haying machinery now? Of course, it's a bit early in the season, but your dealer or catalog house is apt to fall behind in filling orders when the usual rush buying season opens up. Even the factories are apt to be unable to furnish machinery at any price, in which case you might fail entirely to secure what you actually needed with which to carry on your hay harvesting. Again, this scarcity of implements almost invariably causes the price to rise considerably.

This is an ideal month in which to work among the blackberry bushes and raspberry patches. The old canes will be easily removed while the ground still is frozen slightly, and the roots of this season's fruit bushes will not be loosened nor torn up by the work, as is often the case where one waits to do this after the soil becomes wet, spongy and loose.

Winter is not only lingering in the lap of spring, but it seems to hold spring in a tight embrace. The weather prophet who wishes honor in his own county should advance the idea that our seasonal changes have slipped a cog, perhaps two.

Get These Facts Before You Buy a Buggy

Before you buy a buggy you should consider the many points of superiority of

KRATZER Quality CARRIAGES

Sold by Best Dealers

They are made *IN* the West, *FOR* the West; made extra *strong* to stand the wear and tear of pulling through deep mud and going over bad ruts and bumps.

Kratzer Buggies are made to give years' and years' of hard service. They are built of the very best materials—finest hickory, all wool broadcloth or genuine leather upholstery, flexible Cambria steel springs, etc. Every point of strain is reinforced by drop-forged iron. **Kratzer Buggies** are acknowledged the best, and they are sold at *fair prices* which make them cheapest in the end.

Studebaker

How Studebaker Automobiles Are Made

The Final Heart-to-Heart Story.

THROUGH four full page articles which have previously appeared in this paper we have been describing the manufacture of Studebaker automobiles.

From the raw steel we have advanced, step by step, along that wonderful process which builds a Studebaker car. We have told the story in a simple, plain way because it is too big for any other kind of description.

Number of Parts in a Car

Consider for a minute how wonderful an automobile is. Beyond its speed and power, which are familiar to all, there are interesting points seldom recognized. In an average car there are about 1,800 groups of parts, or separate assemblies. There are perhaps 3,000 different parts and, if you count duplicate, some 6,000 separate parts in a finished car. To build this marvelously efficient machine, approximately 50,000 distinct operations are necessary in order that every part shall be fit for its purpose. With such a conception of what an automobile is, it is easier to understand the immense advantage of Studebaker factories, the largest and best automobile plants in the world. When you buy a Studebaker car, you buy not only a high grade car but one which is built with extraordinary efficiency and skill.

The Steel Stamping Mill

A characteristic feature of Studebaker methods is our steel stamping mill. Here are stamped from cold steel plates the hoods, fenders, dust pans, clutch spiders, running board braces, and other light, strong steel parts in Studebaker cars.

The Studebaker Corporation is the only automobile manufacturer that owns and operates its own steel stamping plant. The initial expense was high but the results are profitable because our output is large and the use of strong steel stampings is highly advantageous.

The complete equipment of our stamping mill makes it possible for us not only to put the highest grade stampings into our cars but by the use of special dies we are enabled to make distinctive and attractive designs. The crown shaped fenders on the Studebaker "35" and Studebaker "SIX" are examples. These fenders, up to the present time a feature on foreign cars only, are today being used on Studebaker cars, and one high-priced car alone in the American field. Not a rivet or beading shows along the entire length of these fenders, and the ornamental crown design serves a useful purpose in converging mud thrown against it by the wheels, and serving to prevent the mud from being splashed against the sides of the car.

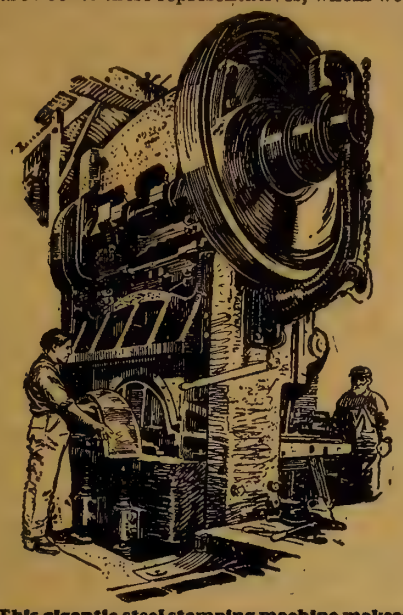
Enameling

Not only do we stamp our own fenders from the sheet steel but the glossy black enamel is baked on them in our own huge ovens. The vibration of many thousands of miles travel will not check or chip off this enameled surface.

It is in such methods as these that the quality of a Studebaker car is unqualifiedly assured, while at the same time costs are brought low.

Studebaker Inspectors

Every buyer of a Studebaker car has his direct representative at the factory. There are 200 of these representatives, whom we



This gigantic steel stamping machine makes it possible to equip Studebaker cars with beautiful fenders.

call inspectors, and it is their duty to see that Studebaker cars are in perfect order before they are shipped. Not a car leaves the factory before one of these men has supplemented all the previous inspections, by a final examination to which the inspector must sign his name. These final inspectors, your representatives, are far more critical than you yourself would be because they are expert automobile men. Their responsibility is to represent you.

A Summary

Let us now summarize the main points of this big, true story of Studebaker manufacture.

The Raw Material

All the iron and steel which enters Studebaker plants is made to our own specifications and thoroughly tested in our laboratories before we use it. These laboratories are wonderfully exhaustive and complete. No university possesses more efficient equipment.

Studebaker Shops

Raw material enters Studebaker manufacture through four main opening channels.

1. The Forge Shop, with 40 hammers, each of which weighs upwards of a ton.
2. The Foundry, where molten iron is cast in exact moulds
3. The Steel Stamping Mill, which presses cold sheet steel into useful forms.
4. The Heat Treating Rooms where 40 cavernous ovens bake and temper every vital steel part as a housewife bakes her bread.

Beyond these are myriads of machines, each for its special purpose, and many accurate within 1-1000th of an inch. We build also our own bodies and tops complete.

Expert Workmen

Ten thousand trained workmen build Studebaker cars. They are each skilled in special tasks.

Engineers

Back of the factories are a staff of engineers who are constantly at work testing out new methods and insuring the full value of Studebaker cars. They prescribe wide margins of safety in the specifications of every part.

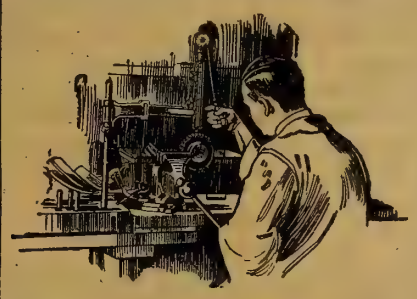
Purchasing Agents

Through its immense buying power The Studebaker organization purchases material at rock bottom cost. Where a small manufacturer buys in the thousands we buy in the millions. All this saving is represented in the price of Studebaker cars.

And now after we have referred to material, plants and workmen, there are three salient facts we hope will linger in your memory.

First—Manufacture

Studebaker quantity manufacture makes it possible to manufacture a better car for less money than can possibly be done in any other way. Studebaker cars are



The Scleroscope test where the hardness of metal is perfectly measured—it is one of the many tests that Studebaker parts must measure up to.

built complete in the largest and best factories in the industry. They are wonderfully good cars at unequaled prices.

Second—Service

Studebaker service is generous and exceedingly effective. In 30 branches all over the United States and with hundreds of Studebaker dealers, repairs parts stations are constantly maintained for the convenience of owners. The original Studebaker guarantee is liberally interpreted and every attention is given Studebaker owners by our dealers. If in time a repair part should be necessary it can always, no matter how old the car, be quickly obtained at a most moderate cost. A Studebaker car could be purchased by parts and assembled at only the price of the car plus a small percentage for extra expense in handling. In other words, when you buy a Studebaker you are sure of long-continued service and good treatment.

Third—Reputation

Back of every Studebaker car, explaining and warranting its quality, stands the name Studebaker. It represents a reputation won over 60 years of successful business and fair dealing. Such a reputation we guard and uphold as a most priceless possession. Today that name is stronger than ever and the man who buys a Studebaker buys sure satisfaction.

In this series of advertisements we have taken you into our confidence. We have talked with you as with old friends. We have a tremendously successful business, but no secrets. If any question should arise in your mind concerning the merit of Studebaker cars, write to us. You will have a full and frank reply.

Most of all we hope that we have gained your confidence. It is confidence and mutual trust, that really makes the world go "round." It is because Studebaker cars are the product of the honest and efficient industry of thousands of skilled men, that we have come to you and told you frankly how Studebaker cars are built.

As long as you are interested in automobiles we want you to be interested in Studebaker cars, and we in turn will reward that interest by continuing to build high grade automobiles at prices no reasonable man can ignore.

As you think about this automobile question remember two things.

1. Studebaker cars are built in the largest and best factories in the industry.
2. The man who deals with Studebaker never makes a mistake.

These two axioms sum up all the automobile buying wisdom any one need to know. Remember them today, next summer, next year and whenever the automobile question comes to your mind.

Send for the Proof Book

If you have not already secured our Proof Book, send for it now. It describes more fully than we have been able to do in these articles, how Studebaker automobiles are made, and gives much information valuable to those who are interested in automobiles. We are glad to send it without charge. It is completely illustrated and you will find it well worth your while.

Send the coupon now.

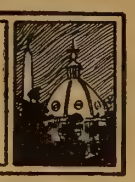
CURRENT EVENTS



TORRENTIAL rains, accompanied by the breaking of levees, dams, and reservoirs, caused the most disastrous floods of years in the Miami, Wabash and Ohio river valleys in Ohio and Indiana last week. It is impossible at this time definitely to fix the loss, in lives and money, but that the toll of death will mount high in thousands and the monetary loss approximate many millions is inevitable. One of the cities to suffer most severely was Dayton, Ohio, located at the convergence of four rivers, protected against just such catastrophes by heavy dikes, twenty-five feet in height, the city being built below the level of the Miami river. The inability of the dikes to withstand the immense pressure of the angry waters caused Dayton to be submerged under fifteen or twenty feet of water, business districts and residence sections alike suffering. A late dispatch stated that at least 65,000 people were imprisoned in their homes or were homeless in this one city alone. Indianapolis and Peru were two of the principal Indiana points to suffer similar damage, the waters rising in the cities with incredible speed and force, sweeping everything before them. The suffering of the homeless and starving people, with the temperature low and stinging wind and rain prevailing, can be imagined. The calamity is said to have wrought the greatest damage of any flood since Galveston, Texas, was literally swept away by a tidal wave a few years ago. The nation has rallied promptly to the support of the sufferers, sending food, clothing and money, for the American heart is quick to feel the impulse of practical charity and helpful sympathy. Such catastrophes bind the nation together in sorrow and give countless opportunities for showing that love and charity and kindly sympathy are still prominent factors in the American character.

ADRIANOPLE has at last fallen before the terrific assaults of the Balkan allies, the Turkish commander setting fire to the town and surrendering last week, after one of the most stubborn and deadly sieges of history. The victory was won by the allied Bulgarians and Servians and brings so much nearer the impending doom of Turkey-in-Europe. It will be recalled that the sultan absolutely refused to surrender Adrianople when the demand for it was made by the Balkan delegates to the peace conference in London last winter. The Bulgarians proposed to allow the sultan to retain possession of the mosques and holy places of the city, but this compromise was refused and war was resumed. Blizzards and severe winter weather have prevented a general campaign against the Turks, but the assault against Adrianople was persistent and insistent and the fortress was no longer able to hold out. It is also reported that the Turkish outposts at Constantinople have been conquered by the allies, which would indicate that the Turks cannot hold out much longer. The allies demand the surrender of practically all the Turkish territory in Europe and the payment of a heavy war indemnity. It is almost inevitable that the crescent will go down in complete defeat before the cross and the Mohammedans be forced out of Europe completely, unless a peace compromise is arranged in the very near future.

TARIFF revision will come up for immediate consideration upon the convening of congress the first of next week. President Wilson has been in conference with house and senate leaders for some days past and hopes to have the party plans so well formulated that but little time will be lost in agreeing upon bills. The president proposes to keep in close touch with congress and to this end will be a frequent visitor to the capitol, preferring this method rather than to hold himself aloof and possibly undo the work of weeks by vetoing a bill which does not meet his personal ideas or which he does not think fully measures up to the platform pledges. It is known that the president is desirous of securing currency reform at the special session, but no matters other than tariff revision will come up in the early weeks of the session. With the investigation already made by the ways and means committee of the house, under the direction of Representative Underwood, it is confidently expected that sufficient headway has been made to insure the early report of bills on which the house, at least, can agree. That the situation in the senate will be critical, however, is conceded. President Wilson has taken time by the forelock by calling in consultation a number of progressive senators, notable in the list being La Follette, of Wisconsin, who visited the White House for the first time in three years. The democrats have a slight majority in the senate, but unless they are able to hold party lines intact there will be difficulty in getting bills through without progressive support. The session promises to be one of the most important that congress has held in many years.

JAMES HAMILTON LEWIS, democrat, and Lawrence Y. Sherman, republican, were elected United States senators from Illinois last week. The election was a compromise between the two parties, which had been deadlocked on the senatorial issue for six weeks. Senator Lewis draws the full six-year term beginning March 4, 1913, and Senator Sherman fills out the two years remaining of the term to which Senator Lorimer was elected, but from which he was deposed by his fellow senators. Both of the new senators have long been prominent in their party councils. Senator Lewis was born in Virginia and has served in congress as a representative from the state of Washington. He is a brilliant orator and wit and is expected to make himself a conspicuous member of the upper house of congress. Senator Sherman was born in Ohio and spent his boyhood on a farm. He served in the Illinois legislature, was speaker of the house and finally elected lieutenant governor. He was a candidate for the long term against Lewis, who had won the fight at the party primary, but finally made the proposition to throw the necessary republican votes to insure the election of Lewis if the democrats would give him the short term. Illinois has been unrepresented in the senate since the deposition of Lorimer and the death of Cullom, but now has its full quota again. The election was not brought about without much bitterness and bids fair to make itself felt the remainder of the legislative session and for some time to come in the ranks of all three of the big parties in the state.

THE toll of death in the Nebraska and Iowa cyclones of ten days ago was heavy. The latest figures place the number of lives lost in Omaha at 200, while fully a third more were snuffed out in adjacent Nebraska and Iowa places. The severe wind likewise caused great life and property loss in Illinois (six lives were lost in Chicago alone), and Missouri, Poplar Bluff suffering severely.

(Continued on page 19.)

No-Rim-Cut Tires
10% Oversize

Our Average Profit
$2.90 Per Tire

Goodyear tires sell all the way from $15.55 to $104.95, according to size and type.

The most popular type—34 x 4—costs from $32.95 to $37.90, differing with type and treads.

And our average profit last year on all these tires was exactly $2.90 per tire.

Why We Tell You

This is something unusual—this stating of profit.

But the worth of a tire depends, in large part, to what the maker puts into it.

Tires may be made at half our cost, yet the cost per mile is greater.

Tires may be skimped to increase factory profit, but the skimping shows up in your tire bills.

Your object and ours is the lowest cost per mile. And the best way to show you that you get it in Goodyears is to tell you our profit, perhaps.

Low Making Cost

We are by long odds the world's largest tire builders. Our sales this year will doubtless reach $40,000,000. Yet our capital is only $10,000,000, and we have no bonded debt.

That is why a small profit per tire pays us fair returns.

Our mammoth output and modern methods bring making cost down to the minimum. Thus most of our cost goes into materials—into things that count.

Judge for yourself if any tire in the world can offer you greater value.

Note the Result

That's how we give you the uttermost mileage for as little as lesser tires cost.

That's how, at our price, you get tires that can't rim cut—tires 10 per cent over the rated size.

These two features alone, on legions of cars, have cut tire bills right in two.

And that is how Goodyears have come to outsell every other tire in existence.

2,000,000 Sold

Men have put into use, on hundreds of thousands of tires, two million Goodyear tires.

Legions of these cars have odometers. Tire mileage has been closely watched. On countless cars, rival tires have been compared with ours.

Two million Goodyears have been tested in these ways—in ways that can't mislead.

And this is the result:

Goodyear tires rule Tiredom. No other tire compares with them in sales.

As men know them better sales double over and over. Last year's sale exceeded our previous 12 years put together.

Now you know, as we know, that your results won't differ from the rest.

What these tires have proved, two million times over, they are bound to prove to you.

If you want tires that can't rim-cut—oversize tires — tires that cut upkeep down to the minimum—insist on Goodyear No-Rim-Cut tires. It is time you found them out.

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

RAILROAD TRACK SCALES.

A Subscriber, Kent, Iowa.—(1) Does the law of Iowa require railroad companies to furnish scales for the use of a shipper of live stock? (2) An old live stock buyer and shipper in our town claims that he owns the stockyards scales and charges me $1 to weigh a car load of stock to ship. Does he own the scales, and has he a right to make such a charge?

Answer.—(1) There is no law specifically requiring railroads to provide track scales for weighing cars of live stock, but the law requires railroad companies to provide and keep suitable facilities for the receiving and handling of any and all kinds of freight at any depot along the line of road, and this provision would probably cover track scales for weighing cars of live stock. The railroad commissioners of the state have power to order such scales if they deem the same to be necessary, and you should apply to them for an order to that effect. (2) We cannot determine from your statement whether the old stock shipper is the owner of the scales at the stock yards or not, and hence do not know whether he had a right to charge you for weighing the car.

LANDLORD AND TENANT—DELIVERY OF RENT.

A Subscriber, Alexander, Iowa.—I rent a farm on shares, the owner getting two-fifths of the crop as rent. The contract calls for free delivery in town? (1) Am I required to pay shelling bill for owner's share? (2) Can the owner compel me to deliver all corn in the ear?

Answer.—(1) If the contract provided that the corn should be delivered shelled, then you will have to pay the bill for shelling, but not otherwise. (2) If no provision was made in the contract as to shelling the corn, the landlord can require you to deliver it in the ear. Such matters as these should be mentioned and provided for in all contracts between landlord and tenant.

OBSTRUCTED ROAD—OPENING FENCES.

An Iowa Subscriber.—(1) Has a mail carrier the right, in order to make his trip, to cut a good woven wire fence and go through a field when the road is drifted full of snow? (2) Under what circumstances has a man the right to cut a good fence and go through a field on account of the road being blocked by snow?

Answer.—(1) If the public road is made impassable or dangerous by reason of drifted snow, the mail carrier has a lawful right to cut the fence and go through adjacent land, around such impassable or dangerous place, doing no more injury than is absolutely necessary. (2) A traveler has no right to leave the road because it is merely bad or out of repair and open a fence and go through an adjacent field, but where a road is obstructed by temporary causes, such as snow, ice, washouts, trees blown across it, and like causes, which render the road impassable or dangerous, a traveler thereon has a lawful right to open fences, and go over adjacent private property around such obstruction, providing he does no more damage than is absolutely necessary.

VERBAL LEASE FOR ONE YEAR—FALL PLOWING.

A Subscriber, Ottosen, Ia.—A rented land to B in 1911 without a lease. In 1912 B, thinking he could have the land for another year, plowed it, but in December A rented the land to C without giving B notice. (1) Who has the right to use the land as tenant? (2) If C has such right can B get compensation for plowing it?

Answer.—(1) A verbal lease of land is good and binding for one year, but no longer. So when the term of one year expired, B should have renewed the contract for another year. The mere fact that he went ahead without such a contract and did fall plowing for another year, would not enable him to hold the place as tenant, after the first year expired, and, therefore, A had a right to rent the land to C and C can hold it as tenant. (2) By rights, B should be paid something for fall plowing, but it is doubtful whether he can recover anything by law.

REPAIR OF PUBLIC ROAD.

A Subscriber, Luzerne, Iowa.—There is a public highway in this vicinity that has not been worked for six or seven years, and was traveled by only two or three parties before it became impassable. It will require an expense of $400 or $500 to put this road in good shape for travel. Is the township required to do it, and if so, where will the township get funds to work the balance of the roads in the township?

Answer.—The board of supervisors of the county has general supervision of the public roads, but it is the duty of the township trustees to order and direct the expenditure of the road funds and labor belonging to or owing to the township. The trustees may certify a desire to have an additional levy made for road purposes in the township, and the supervisors may

SHINGLE SENSE, Mr. Farmer LUMBER ECONOMY SERIES, No. 5

There is real pleasure in talking "SHINGLE SENSE" to a man of known and demonstrated "HORSE SENSE". The man of "horse sense" has proved what he knows, and he sticks to it. If he hasn't proved the unequalled economic value of **Cypress Shingles**, we hope he will lose no time in doing so, and thus add "shingle sense" to his accomplishments. It is quite the custom in this country to accord a corner on "horse sense" to the farmer man, and we acquiesce in the practice—he has it, all right. Now, if you will but **test out** the **shingle** problem and learn the **truth** about the "benefit eternal" in using **CYPRESS**, "the Wood Eternal" for roofs, you will earn a diploma of graduation in "Shingle Sense", and be big **money in.**

In this house (all CYPRESS) in Sinepuxent, Md., Commodore Decatur was born, January 5, 1779. In 1884 a cyclone left it as photographed above—wrenched and half-denuded, BUT NOT DECAYED. CYPRESS IS EQUAL to an insurance policy against all ordinary Depreciation and Repairs. Cypress *LASTS*. TRY IT.

A Few Elemental Lessons in Shingles:

A SORRY BUNCH is that of the "ornery" scrub shingles you sometimes get when you simply say "shingles." They split in nailing, rot quickly, ooze gum until it drips from the eaves. No good. They may be offered to you, Mr. Farmer, as a *substitute* for Cypress. "The Shingle Eternal."

"KILLED IN THE KILN," is the verdict on many shingles that are shipped a long distance. Baked to death to save freight. They may be offered to you, Mr. Farmer, as a *substitute* for CYPRESS. "The Shingle Eternal." Next time you will know better. INSIST ON CYPRESS.

"A THIN PROPOSITION" applies to shingles that are not of proper thickness at the butt. Look pretty? But they do not last well. They may be offered to you, Mr. Farmer, as a *substitute* for Cypress, "The Shingle Eternal." You'll answer "nothing doing—give me CYPRESS".

COULDN'T SPANK A BOY WITH SOME SHINGLES. Too narrow. They will do for toothpicks, but not to cover your barn or house with. They may be offered to you, Mr. Farmer, as a *substitute* for Cypress. Leave 'em. The alternate soaking and baking that a roof has to stand will cause a very wide shingle to "buck" and then split. There is no help for it. *Moral:* use only *standard width* shingles, 4, 5 or 6 inches wide by 16 inches long. Then be sure you get *CYPRESS* SHINGLES—BECAUSE *"CYPRESS LASTS PRACTICALLY FOREVER."*

REMEMBER, Mr. Farmer, that whereas other shingles are doing extra fine if they last 8 to 10 years, **Cypress Shingles** are officially recorded by the U. S. Govt. as having lasted as long as 228 years. (Refer to Vol. 1, Cypress Pocket Library FREE for a postal. It also includes full list of all the other **36 Volumes.** Every one an authoritative reference work.

Nothing is more annoying to the owner of a new house (or a new roof) than to "turn the water off" onto the ground (when the cistern needs replenishing) for rain after rain until the "newness" wears off the roof. (And some roofs stain the water or make it taste "woody" as long as they last—which with some kinds of shingles needn't be long).

The only alternative to the total loss of good, soft water is to risk the staining of clothes if you wash with it, or the toleration of a "roofy" flavor, that cannot be filtered out, if you try to drink it. **CYPRESS SHINGLES NEITHER STAIN NOR TAINT THE WATER.** They are the only kind that do not. **CYPRESS** shingles—"and no substitutes!"—is the prescription.

DEMAND CYPRESS shingles of your dealer. If he tries to work off a substitute, don't take it. If he does not carry CYPRESS in stock, write us and we will tell you where you can get them.

Cut Out and Ship in the Coupon!

This little "Kitty-Cornered" coupon, if signed by you and sent to *us*, will bring *you* a booklet or two. Vol. 7 is all *about shingles*—a book of "Shingle Sense." Vol. 20. *"Farm Lumber Needs"* is a dandy. JUST ASK.

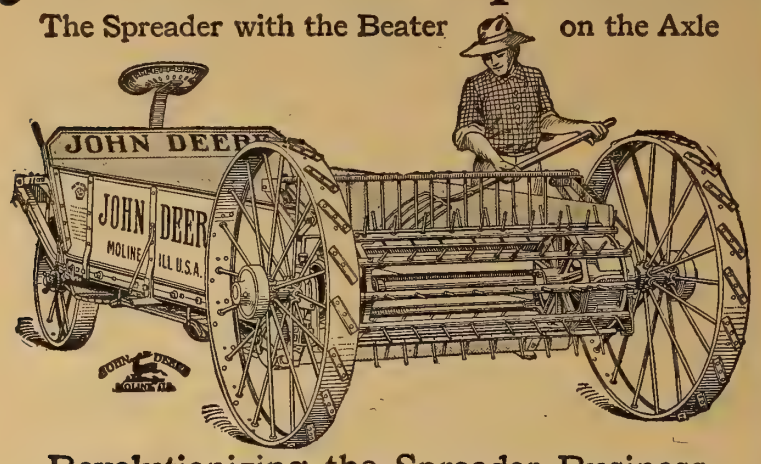
John Deere Spreader

The Spreader with the Beater on the Axle



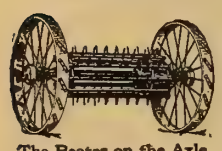
Revolutionizing the Spreader Business

Simplest and Strongest Spreader

On the John Deere Spreader, the Spreader with the Beater on the Axle, two hundred working parts that continually give trouble, are done away with. This spreader is so simple and strong that it does not get out of order. It has no clutches, no chains, no adjustments.

The John Deere Spreader is the greatest improvement in spreaders since their invention. It is as much in advance of ordinary spreaders as the self-binder was over the old reaper.

The Beater on the Axle

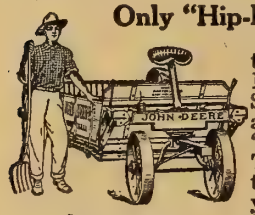


The Beater on the Axle

Mounting the beater on the axle makes the John Deere Spreader possible. This feature is fully patented. You cannot get it on any other spreader. The beater on the axle does away with all chains and clutches. It puts the strain and stress of spreading on the main axle—where it belongs—not on the sides of the box or the frame of the spreader.

Mounting the beater on the axle makes the John Deere Spreader easy to load—low down.

Only "Hip-High"



Easy to Load

Sides of the John Deere Spreaders are only 'hip-high." The first three feet you lift a fork of manure are easiest of all. From there on to the top of the ordinary spreader is hard work.

You lift manure only three feet with the John Deere Spreader. You always see into the spreader, just where each forkful is needed. Wheels do not interfere with loading.

Few Parts

There are no clutches to get out of order, no chains to give trouble, and no adjustments to be made on the John Deere Spreader. On old style spreaders, ten to twenty adjustments are necessary before they will work at all. Any one of these, wrongly made, might put the spreader out of business.

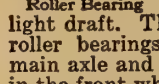
Out of Gear

To start spreading with a John Deere Spreader, move the lever at the driver's right back until the finger or dog meets the large stop at the rear of the machine—there is no clutch.

The John Deere Spreader does not get out of order. It is always ready for use.

Roller Bearings

Roller bearings, few working parts, the center of the load comparatively near the team and the weight distributed over four wheels, make the John Deere Spreader light draft. There are four sets of roller bearings, two between the main axle and the beater, and two in the front wheels.



Roller Bearing

Bridge-Like Construction

The substantial steel frame on John Deere Spreaders has high-carbon structural steel side sills. Like modern railway bridges it is built on the best known principles of steel construction.

Built Like a Steel Bridge

It is securely bolted, insuring rigidity and perfect alignment, even after years of use.

Valuable Spreader Book Free—Get this book at once. It contains reasons for using manure—how to apply it to the land, how to store it, and a description of the John Deere Spreader, the Spreader with the Beater on the Axle. Ask us for this book as Package No. Y 27

John Deere Plow Co., Moline, Illinois

Spreader Users! Notice!

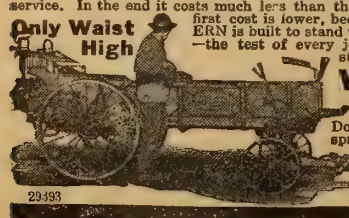
Send for the book that tells *all the facts* about *every* part of the Spreader that stands on its record of twelve years' use; that is used and endorsed by over 100,000 progressive farmers; a spreader that has more *good advantages, simpler design* and *better construction than any other.*

Great Western Now Made "Low Down" For Easy Loading

This is the *old reliable*—retaining all the features that have made it famous and successful—but built *low down—waist high*—with *safe clearance* from the ground. Wheels *under* the load. Buy the *best* spreader while you're buying. Avoid trouble, delays and expense.

Buy Your Last Spreader Now

It will be a GREAT WESTERN, because this is the machine for longest service. In the end it costs much less than the shoddy spreader whose first cost is lower, because the GREAT WESTERN is built to stand the strain of all conditions—the test of every job—and to give years of steady, continuous service.



Special Features of Real Merit

Wheels *under* the load. Short wheel base and roller bearings making lightest draft. Simplest possible drive. Fewest parts. No enclosed gears or transmissions. Nothing complicated. Endless roller apron running on *three* sets of large rollers. Indestructible front. Double bolster. 16-inch malleable fifth wheel.

Write TODAY for the FREE BOOK, describing the GREAT WESTERN. Don't buy a fad. Don't buy an uncertainty. Don't experiment. Buy the *proved* spreader—now low-down so it's easy to load. And write today for the GREAT WESTERN Spreader Book. It's FREE.

HORTICULTURAL TOPICS

THIS department is conducted by an experienced horticulturist. All questions relating to horticulture will be answered if of sufficient general interest to warrant a reply in this department. Communications and inquiries upon horticultural topics should be addressed to this office.

THE AMATEUR GARDENER.

It is a fact that there are thousands of farmers who, if they undertake a small vegetable garden this spring, will be doing amateur work. There is supposed to be such a gulf between farming and gardening that many farmers never "come across;" but, of course, this gulf is more imaginary than real. The same soil, sun, moisture and culture do the business for one as well as for the other.

But gardening may be called microscopic farming, and it is that very fact which makes it so distasteful to multitudes of farmers. They don't like to putter with small things. They delight to take a good team and big harrow and cover forty acres per day, but it is too much like puttering to spend a day in a half-acre garden.

It may (and it has) happened that a half-acre garden well tended has produced as much in cash as the whole crop of some forty-acre fields, but we will not claim that this is the rule.

Still it may be claimed, and the claim may be well substantiated, that a half-acre garden well tended and wisely planted does as a rule yield as much in money value as any two or three acres of field crops. Think of that, all you farmers who think it don't pay to putter.

Some farmers excuse themselves from gardening work by saying that their families don't like vegetables. Perhaps it is true—at least it is certain that many families have never had a chance to cultivate a taste for them, but it is claiming more than is justifiable to say that they don't like vegetables when no opportunity has been given them to ascertain whether they like them or not.

There ought to be this spring, in this year of new beginnings, governmental and otherwise, a change. There ought to be 10,000 farmers who would decide to undertake a sensible vegetable garden. And as they have never done any real earnest garden work it might well be called amateur gardening.

Now, to begin with, the amateur farmer-gardener ought to decide what are the staple garden crops and what are only novelties and frills.

In the following list of staples we leave out sweet corn and potatoes, for they are really field crops grown more or less by most farmers for stock feed. But the staple garden crops are these: peas, beans, cabbages, tomatoes, parsnips, celery, squash and onions.

This is the list which every family should be supplied with in a civilized community With these, either fresh or stored in some form, you may have a healthful and appetizing variety for your dining table the year around. We would possibly add to this list lettuce and radishes, but they are only transients and do not really come into the clear distinctions of staples. We name these as staples because they are the more valuable for your home table use. They are the varieties which will make and save you money.

If you have the time and the room to spare you may enjoy planting and cultivating a dozen or more other vegetables. Beets, carrots, salsify, "cukes," cauliflower, turnips, melons, peppers, spinach, etc. But we are assuming that you want to make the most for your labor, and while there will be some satisfaction in this latter list there will not be much money. So keep it clearly in mind that the staples will pay in dollars and cents, while the others rarely (and only under certain circumstances) will pay for the labor and time which they require.

Better stick to the staples until you have acquired such a taste for gardening that you don't care whether it pays or not. The question will first be asked by the amateur, "In about what proportions shall I plant these staples?" That is a very sensible question, for some are more desirable than others. It depends, in a measure, upon the taste of the various families.

We can indicate what seems to be the right assignment of space. Say

POTATO bugs

and the host of enemies of your vines are on the job early and late.

Your best defense is in using our Devoe & Raynolds Co.'s Pure Paris Green. Use it when the bugs first appear.

You'll have a better fruit crop if you use our Devoe Sprays—Arsenate of Lead, and Lime and Sulphur Solution.

Specify these goods in ordering. It will pay.

Ripe Berries In 4 Months

This wonderful EVERBEARING Tree Raspberry is a valuable acquisition. Not only is it grown a handsome bush 6 feet high, but it bears and should be grown in every garden for its berries. It yields a crop of fruit the same summer you set it from plants set in April or May. Plants set in April gave ripe fruit July 4th and continued to produce fine berries until the end of October.

Berries are large and beautiful, as large as the largest Red Raspberries, brilliant crimson color, firm, and fine flavor. The plants are perfectly hardy even in the coldest regions and do well on any soil. A dozen plants are worth several dollars each to any garden and we want every reader of this paper to try them. Send us a dime and if we are not satisfied we will fruit this summer, mail you plants which we guarantee will grow in North or South, as interesting novelty for your garden. Order Quick For This Offer Will Not Appear Again. Plants ready to set in Garden, 15c each —3 for 30c—12 for $1.00, postpaid.

QUICK GROWING PEANUT

With every order for plants of this great BERRY, (If you enclose M. O. or Silver) we will send FREE A Sample of our NEW EARLY QUICK GROWING SPANISH PEANUT which will grow in North or South, as interesting novelty for your garden.

HARVARD NURSERY, Box W HARVARD, ILL.

you have selected a good, well-tilled patch of a half acre Let it be about six rods by fourteen. It is best to have it in that shape, for you are a wise man, and you plan to cultivate with a horse. With rows four feet apart you will have, say, twenty-four rows.

Reserve two rows for peas, early and late, and four rows for beans. This will include all kinds—string and shell beans, white navy for winter and a few lima or butter beans.

Then allow three rows for cabbage, some early and some late, and you ought to have a supply of this vegetable lasting from July to the following May, and you can if you will take a few simple lessons in winter storage. Then two rows of tomatoes. This will be ample, and you will doubtless have this fruit for market—sell them to your less provident neighbors.

Then allow one row for parsnips. If this is too much, use part of it for some other root crops, but with most people parsnips are a staple for spring.

Then three rows for celery; that is, use that space, but set only two rows —you will need the earth for banking. There are some difficulties about celery growing, but they may be mastered, and it is one of the sure-enough staples.

Then three rows for squash; that is, save a three-row space, but only plant one row. They will cover the ground. Do not be fooled in variety, but plant the one only satisfactory, the reliable Hubbard.

Then take two rows for onions. You may try as many varieties here as you fancy—seed, sets (white, red, yellow and brown—some large and some small). Then you will have four rows left for experiments with any of the other vegetables which you have a fancy for, for in spite of advice given you will be sure to think some of them just as sure to be profitable as those named. We know better, but also we know that you will want to have your own way, so we have planned from the start to have a little space where you can "buck the tiger."

Now such a garden, with a favorable season and good care (and notice that good care will do much to make a favorable season), will yield an output of $200, as much as six acres of corn sold at seventy cents per bushel.

TAKING BULB NOTES.

To the Editor of The Homestead:

Along about the first of February the negligent flower lover begins to think about a bed of tulips or hyacinths for the spring, only to find they are too late. The next year they forget all about the last year's experience and do the same thing over again. Others remember about planting in the fall all right, but don't know what they want, and can't remember what the flowers were that they admired so much in the spring when they saw them blooming in their neighbor's yard. Now there are others who do not know the varieties when they see them, and hesitate about asking all the questions they wish, and the information they obtain is not retained, as no effort is made to impress it on the memory and no notes are taken. I am going to give you a few points of interest about the various spring flowering bulbs, and you can then take notes from your own and your neighbor's garden and be in a position to order your bulbs intelligently when the time comes, as you will have a list of your needs all made out.

In making your notes note well the size, form, color and habit of growth; height, form, color and lasting qualities of the blossoms; and any special characteristics that appeal to you, for all these will be helpful when you make up your final selection. Beds in the garden should be planned carefully, keeping in mind the beauty of the whole, rather than the individual. It is a mistake to try to crowd all sorts into one bed. It is much better to plant twenty-five tulips in a bed than to plant two or three bulbs each of a dozen different kinds.

The three classes of bulbs mainly used for bedding are the hyacinths, tulips and narcissus. The lilies are used for clumps, and the crocus for planting scattered through the grass of the lawn.

The tulips are the most brilliant bedders of the group, and the cheapest. Probably more tulips are planted than all other bulbs put together. The single tulips are preferred by most growers to the double, and I have always liked the single late better than the early. The Darwin tulips are a popular variety of single late, and have stems eighteen inches or more in length, and very rich colors. The single earlies have stems six to twelve inches in length, and have a wider range of colors, but hardly so rich as the lates. The Parrot tulips are dwarf, but the flowers are very large, with odd, fringed, and brilliantly marked petals. They are rather late bloomers. More of the single and double early tulips are planted than any others, and they can be purchased of almost any florist either mixed or in separate colors and of such varieties as bloom at the same time and are of the same height.

Hyacinths bloom earlier in the spring than the tulips, and nothing can be more welcome than their beautiful spikes of fragrant bells. The colors are delicate, and range through the shades of red and blue, from pure white to deep purple. The little Roman hyacinths bloom very early, and should not be planted too early in the fall or they will come up before freezing weather, and be ruined. Don't confuse the Romans with the Dutch Roman, for the Dutch Romans are not Romans at all, but are young bulbs of the regular Dutch hyacinths. I much prefer these for bedding out to the large bulbs, as they will give several years more of bloom before dividing up, as all hyacinths will do when fully matured.

After the hyacinths in popularity comes the narcissus, and there are numerous varieties, but only a few that are planted generally, though a good collection of these will be well worth the money and trouble it costs, and you will be surprised at the pleasure you will have in watching the development of the varied forms and and colors. While the tulips are brilliant and the hyacinths delicate in coloring, the narcissus are extremely modest, being white or some shade of yellow. The polyanthe varieties bloom in clusters, but are seldom planted in the garden, as they are not sufficiently hardy to succeed well. They are used freely for house culture, the Paper White and the Chinese Sacred Lily belonging to this class. The Poeticus, or poet's daffodil, is a very pretty single white, with a yellow cup. The Poeticus Ornatus is identical with Poeticus except it is earlier, and has a scarlet edging to the cup. Probably the one variety that gives the greatest pleasure to its grower is the Von Sion, the large yellow double variety known as the Dutch Daffodil. All the trumpet varieties are fine, and easily grown. The jonquils belong to the narcissus family and have the same hardiness and fragrance.

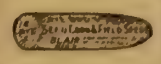
The lilies are another class that vary so much they hardly seem to belong to the same family. The hardiest and most easily grown of the lilies is the old-fashioned tiger lily of our grandmother's garden, and the newer double form of the same. The Candidum is a splendid pure white lily, often known as the Madonna lily, and as hardy as the tiger and as easily grown. It is especially fine for the cemetery, and usually blooms about Decoration Day. The Japanese lilies, Speciosum Album and Speciosum Rubrum, are beautiful and rapidly gaining in favor. The Album is pure white, and the Rubrum is white with a deep crimson stripe down the center of each petal, and crimson dots on the white.

There are many beautiful other lilies advertised, but these are the best that are hardy enough to be generally planted. The Lilium Longiflorum is hardy in Oklahoma and blooms finely in the open ground, but I have never tried them here and doubt if they would come through a severe winter. They are grand lilies, identical in flower with the Harrisii, or popular Easter lily of the florist, and, in fact, are grown extensively in place of the Harrisii, which is subject to a bulb disease.

Now there is one other variety I want to call your attention to before closing this article, as it is not generally planted, but I am very partial to it. It is the Spanish Iris, a hardy bulbous form of the well-known Per-

SEED CORN at farmers' prices. Reid's Yellow Dent, Iowa Yellow Dent 90 day, Iowa Silver Mine, Boone County White and Big Boody Butcher; germination practically perfect; prices $1.75 for seed shelled and graded selected ear seed in bags $2.25, in crates $2.50; R. R. free with 5-bu. lots or over, any variety. We ship on approval. Write for catalog and free samples. BOTNA VALLEY SEED CO., Box E, LEWIS, IOWA.

5,000 BUSHELS SEED CORN



From seed corn center of the world. Reid's Yellow Dent, Silver Mine, White Cap Yellow, Legal Tender, Blair Yellow, Nebraska White Prize, Pride of the North, Blair White. Send for free catalogue.

AYE BROS., Blair, Neb.

Box 1. Seed corn center of the world.

LEAMING YELLOW CORN

HIGH in oil and protein; best for stock; will produce two to five tons more of ensilage per acre than many varieties. Guaranteed to test 97 per cent germination. Price $2.50 on the ear, or shelled and graded. Address

WOODLAWN FARM STERLING, - - - ILLINOIS

SEEDS. Fire dried SEED CORN husked before the frost, dried on independent seed ear racks with air and steam heat. Sure to grow because germ is preserved. Also Clover, Alfalfa, Oats, Rye and Garden Seeds. Write at once for FREE CATALOG and receive FREE SOUVENIR. Address

FRED ECHTENKAMP, Box B. Arlington, Nebraska.

RIST'S SEED CORN

IS carefully grown, carefully selected and tested. Four of the leading varieties and plenty to fill your order. Lowest prices for the class of seed to be had anywhere. Also other seeds. Send for cat alog. Mention Homestead. Address

FRANK J. RIST, - HUMBOLDT, NEB.

Strawberries

FOR 40 years we have specialized on strawberry plants, and can furnish most any variety in any quantity desired at money-saving prices. All plants guaranteed. Send for money-saving list and full description. Geo. W. Bridgman Nursery Co., Dept. A, Benton Harbor, Michigan.

SEED POTATOES FOR SALE—Pure-bred, best varieties. Address Guy Anderson, Ogdensburg, Wis.

SALZER'S Seed by actual Test Doubles the Yield

Has done so for thousands of farmers in New York, Ohio, Illinois, Indiana, Wisconsin, Minnesota, Iowa, Dakota, Kansas, Nebraska and other states east and west. Why not for you?

These farmers have the same soil as yours.
They work their land the same.
Why do they have larger crops?

Wheat Barley Corn Grasses Clovers Alfalfa Potatoes Oats &c.

Salzer's Seeds is the answer. Our seed is carefully tested for germination and vitality. It's pedigreed Added to that, it is northern grown, insuring thrifty condition and sure maturing. Salzer's Seeds cost but little. We sell direct—no commissions. We save you middleman's profits. Valuable premiums given on every dollar's worth you purchase make our seed the lowest priced reliable seed on the market.

Let us send our new catalog and Premium List for 1913 for you to read and be convinced. It has the biggest, best things in Farm and Garden Seed, Flowers and Nursery Stock. We list a large number of money-saving Flower and Vegetable Seed Collections that will delight you with their splendid variety and completeness.

Salzer's Hardy, Northern-Grown Alfalfa

Will grow where clover grows and three times more valuable as a food producer. One ton equals ten tons of timothy. Hardy as an oak. Biggest, quickest, most continuous money-maker for the farmer.

Salzer's Seed Corn

Golden Glow (Wisconsin No. 12) and Silver King (Wisconsin No. 7) have been brought to greatest perfection. These varieties have revolutionized corn growing in Wisconsin—making it first in yield per acre west of Ohio. A strong grower and matures early. Our seed for 1913 is extra choice.

Salzer's Earliest Potato Collection

Four rare earliest sorts and one later. Separately packed, full weight, $3.90 per barrel. Farmers planting this collection have realized more than $100.

Salzer's Rejuvenated White Bonanza Oats

Has a record of 259 bushels per acre. The most prolific oats in cultivation. Grain heavy and plump. Long heads. Straw stout and not readily lodged. We have made extra low prices for 1913, so that everybody will plant this great oats. Write for quotations from one bushel to one thousand bushels.

SUCCEED WITH SALZER'S SEED
10 Big Sample Packages 10c

For **10c** we mail big packages of Salzer's famous Alfalfa Clover, White Bonanza Oats, Silver King Barley, and many other packages fine farm seeds. **14c** Flower seed collection—six generous packages—brilliant bloomers, **14c.** Vegetable seed collection—six big packages—enough for a good garden—**16c.** Both collections for **25c,** or send **30c** and we add a package of wonderful new Earliest Red Riding Hood Tomato Novelty, alone costing 15 cents.

Our 1913 catalog is bigger and better than ever. Send for this catalog. It is free for the asking.

JOHN A. SALZER SEED CO. 124 So. Eighth St. LACROSSE, WIS.

SEED CORN--BRED for HIGH YIELD

BY "THE MAN WHO DOES THINGS WITH CORN"

will average an increase in yield of ten bushels per acre, above what even the best pure-bred varieties will give under identical conditions.

EVERY EAR GROWN ON MY SUNKIST FARMS! SELECTED IN EARLY FALL; DRIED ON A RACK!

Practically 100 per cent strong sprouts, both root and stem sprouts starting vigorously at low temperatures, and showing ability to withstand cold rains and unfavorable conditions at planting time!

Sold on ten days' approval—if it doesn't please in every respect, ship it back at my expense and get your money back. I think it's the best seed to be sold this year—but you can be judge.

Get my Free BOOKLET No. 3, telling how I breed, care for, and sell this different seed—my famous **high-yielding strains.**

Address TODAY,

sian and German Iris, better known as "flags." The Spanish Iris comes from bulbs, and soon form fine clumps. The flowers are borne on long, wiry stems and have much more substance than the German Iris. The colors are various shades of white, blue and yellow, and one bronze or purple and gold variety has about the richest coloring seen in flowers.

L. H. Cobb.

EVERGREEN WINDBREAK.

To the Editor of The Homestead:

Subscriber, writing from Shellsburg, Iowa, asks about an evergreen windbreak, which he is preparing to plant this spring. His plan is to set three rows of evergreens of three different kinds, arbor vitae for the inside, then Norway spruce, then either jack pine or Scotch pine.

We would prefer the Scotch for the outside row, as it is a more vigorous grower, branches out better and makes a windbreak quicker than a jack pine. The jack will run taller, but in the course of fifteen years will make far less timber than the Scotch. There are a number of varieties which would do well answering your purpose. For instance, you might substitute red cedar for the spruce. In our judgment the cedar will make a better windbreak in a given time than will the spruce, though the spruce will be taller than the cedar. The Austrian pine is very hardy and for some reasons more desirable than the Scotch. It is a slower grower, but makes a more compact, solid tree when it is grown, but it is more difficult to start than the Scotch. In fact, the Scotch pine has this to its credit: It is one of the easiest to transplant of all our commonly grown evergreens.

If you were to add a fourth row it would be well to put in the Austrian after the spruce or cedar, and just before the Scotch.

Instead of the Norway spruce you would do well to take the Black Hills, one variety of the white spruce. It is hardier than the Norway, and, while a little slower grower, is in consequence a thicker topped tree and a better windbreak. It is also more attractive in form and color.

Your high, black prairie soil ought to be good for all of the evergreens named. It is only a question of getting them well started. If the first season is wet enough to give them a good send off and you conserve moisture by either mulching or culture your windbreak should be a success.

Of course, you should use care in getting trees that have been well handled. Be sure that the roots have not been exposed to sun or wind, and dried out. To be sure of that, buy of some responsible nurseryman. It is best to go with your own wagon to the nursery and see the trees dug, and pack them yourself. Using earth in the wagon box, or at least a generous quantity of wet straw, you cannot fail to get them home in good shape. Then when you set out the trees drive to the field and take out the trees one at a time.

Of this be sure: you cannot take too much pains to make sure that each tree you put into the ground is in first-class condition. It is extremely discouraging to go to the expense and labor of buying and setting trees only to find after a few months that they are all leisurely dying and all your work has to be done over again.

If so situated that you cannot go to the nursery, demand of your nurseryman a guarantee that the trees have been well handled. Let him know that if they fail to grow because the roots have suffered injury you will hold him responsible for damages. That understanding will spur him up to care at his end of the line.

M. C. Hinkley.

With the open range now supplying the poultry more and more bugs, worms, etc., those poultry keepers who have been feeding beef or meat scraps should carefully cut down the supply considerably in this ration, as it is very easy to overdo such feeding at this season, and an oversupply of it is a check on the egg yield, at the same time being liable to cause serious diseases among the flocks.

THE PREPOTENT SIRE.

To the Editor of The Homestead:

An animal that has been bred for a long time along certain given lines is more apt to be prepotent because the qualities he possesses have become fixed and are therefore transmitted from one generation to another with a greater certainty. This accounts for the fact that animals that have been pure bred for a long time are more apt to be prepotent, as are also the offspring of prepotent sires. It has also been found that animals that are line bred, or in other words, trace back through several different lines to the same great ancestors, are more apt to be prepotent. This is due to the fact that "heredity transmits with certainty only what has become a fixed characteristic in the race." Breeders have also found that the greater number of the ancestors that have shown unusual merit and the nearer they appear in the pedigree to the animal in question the better.

The above principles will be of help to use in our search for the prepotent sire, but it is not always easy to recognize him when found. Hambletonian 10 was not recognized as one of the greatest sires the world has ever produced until long after he was dead. The great Jersey bull, Stoke Pogis 3d, was sold for beef before his real worth was known. The great Jersey cow, Jacoba Irene, was bought for about the price of an ordinary thoroughbred, and two of the greatest Holstein cows now owned in New York state were bought in Ohio for almost nothing because their owner did not appreciate their real worth. When animals of this kind are given a chance to show what they can do in other hands the loss is not so great, but when sacrificed in our slaughter houses as an offering to lack of knowledge and proper business methods the loss is a pitiable one.

Nowhere does the saying that "the best is the cheapest" apply more forcibly than in the selection of a sire, and the sooner this fact is thoroughly recognized by us the better for all concerned. If we are tempted to use a poor sire we must remember that "we cannot gather grapes from thorns nor figs from thistles," and that "the sins of the fathers are visited upon their children, even unto the third and fourth generations." The importance of this fact will be better seen when we consider how rapidly the individuality of a herd is changed. With the first cross we have introduced 50 per cent new blood, with the second cross 75 per cent, with the third cross 87½ per cent, and with the fourth cross we have introduced nearly 94 per cent new blood, so that the offspring from the fourth cross carry only about 6 per cent same blood as the original herd. Thus in a very brief time we have almost a complete change in the character of our herd, and whether that change is a marked advance in the right direction or a step backwards depends upon the wise or unwise selection of the sires that have been used. Just think of it for a moment, nearly 94 per cent of the blood in the last generation is of our own choosing. How important then that we should make a wise choice because the wisdom of that choice determines whether the individual members of the herd are to be worth a few dollars or a few hundred dollars each. If we economize here we are certainly "penny wise and pound foolish," and I believe we can truly say that there is no place except in the education and care of his family where a farmer can invest money to as good advantage as in a high-class thoroughbred sire. By this I do not wish to suggest that one should pay more than an animal is worth, but if they are bought "worth the money" they will repay the investment many times over.

Another advantage in securing a good sire from a progressive herd that is making history for the breed is due to the fact that in many cases of this kind we have the great pleasure of seeing the value of such a sire doubled or trebled by the large records that are made by members of the herd from which the young sire has been chosen, and we are thus able to reap a fair and legitimate benefit from the labors of others.

In our search for a prepotent sire we are only doing that which every successful business man does, that is seek to increase the efficiency of our plant and add to the value of our product. How long do you think a manufacturer would use an inferior machine if by a comparatively small investment he could double or treble the value of his output? He would not hesitate one moment and if we would reap the same degree of success we must use the same good business judgment. Large financial institutions have well-laid plans by which they seek to lay the foundation for increased future profits. For instance the bankers are considering plans by which they can assist the farmers in producing large crops, so that the farmers in turn will have larger sums of money to deposit with them; the railroads are also trying to assist the farmers in raising larger crops so that their own traffic may be increased. This is not an altruistic effort on the part of either, but rather good business judgment in planning for future results. We believe our farms are worthy of the same careful forethought and that the prepotent thoroughbred sire is one of the sure sources of increased profit.

The farmers of the country, as a rule, have been quick to appreciate the advantages of up-to-date machinery for doing their work, and even the good family horse and carriage are in many cases being supplanted by the automobile. Farm homes are taking on many of the comforts and luxuries of life, but in the midst of all this improvement the dairy interests in many places seem to have been at a standstill and made no progress whatever. Many farmers, while joining in this great forward movement in other ways have been content to milk and care for cows that at the best are only able to produce about 150 pounds of butter fat in a whole year. The greatness of this loss can be better understood when we remember that the dairy cattle of the country produce over $800,000,000 annually, and at a conservative estimate one-third of the cows that help to produce this vast

You can't think "silo" without thinking of the "INDIANA SILO"

You can't look at *any* Silo without mentally comparing it with the Indiana Silo. You can't read about the value of silos *in general* without remembering some *special* advantage possessed by the Indiana Silo exclusively. For example, there is the method by which the two-piece staves are joined in the

INDIANA SILO

Look at the picture. Notice the air-tight, self-draining, all-wood mortised joint. That patented joint has revolutionized the whole business of building silos by making it possible to construct a perfectly solid stave silo of any desired height. When put together with a little white lead at these joints, a two-piece stave Indiana Silo is as good as if it were made of one-piece staves, and very much less expensive. There is no metal at these joints to become corroded by the acids and no outside moisture can collect in them to rot the wood. This joint adds years to the life of your silo and many dollars to its value, as proven by experience.

When you buy an Indiana Silo you not only secure this scientific and permanent form of construction but you know that it will go up easily and will stay up for years and years without repairs.

Order now—today—on our easy buying plan.

WRITE today for our catalogue and a free copy of the book "Silo Profits", which is the story of the Indiana Silo as written by scores of owners of Indiana Silos. And ask us for the name of our representative in your locality.

"You *buy* an Indiana Silo—but it *pays* for itself."

amount of wealth are kept at an actual loss, another one-third hardly pay for what they eat, so that all the net profit is made by the other one-third. Considering the millions upon millions of dollars that are thus lost each year we can better understand the great need and importance of better and more prepotent sires. In considering the many advantages of an animal of this kind we must bear in mind the fact that when the excellence and prepotency of the sire are greater than that of the females his influence is correspondingly increased. This is a very important fact and should always be borne in mind, as it affords the means of making very rapid progress in the improvement of the herd. Ordinarily the sire and dam are each supposed to give 50 per cent of their characteristics to the offspring, but when the sire by repeated reproductions of a certain combination of qualities has acquired an almost certain ability to transfer those qualities to the offspring we have in our possession as already stated the means of making sure and rapid progress in the development of our stock. Under circumstances of this kind the old saying that "the sire is half the herd" does not by any means express the real facts, and I believe we may truly say that such a sire is 75 per cent of the herd, and probably even more than that.

The possession of a sire of this kind has frequently been the source of a large income and sometimes of a competency. Coupled with the financial gain comes the great pleasure of being the owner of an animal of this description, and in many cases this is of more real satisfaction than the money itself. With such a sire one may well aspire to become one of the "master builders of the breed, and not a mere peddler of pedigrees." That the name of the wonderful cow De Kol 2nd appears in so many of the pedigrees of the greatest cows in the country is in a large part due to the wonderfully prepotent sons which she produced. At a time when there were 56 Holstein cows, each of which had produced 30 pounds or more of butter in seven days, her name appeared in six-generation pedigrees of those animals in the direct line of descent sixty-six times. Her name appeared in 39 out of 56 of the pedigrees. The name of her mother, De Kol, appeared 42 times, and next to her comes the great cow, Pauline Paul. Her name appears 22 times and is found in 17 of the 56 pedigrees. Next comes Pietertje 3rd. Her name appears 20 times and is found in 19 of the pedigrees. Next comes Pieterje 2nd. Her name appears 19 times and is found in 17 of the pedigrees. In these pedigrees the name of Netherland Prince appears 55 times; that of Milla's Pietertje Netherland 37 times; Paul De Kol 30 times; Duke Netherland 26 times; De Kol 2nd Prince 23 times, and so on among other great sires of the breed.

With the ownership of a great sire comes great responsibilities because prepotency in its highest sense comes to but few, and therefore the great importance of being able to detect it and make the most of it when once it is in our possession. Under circumstances of this kind if one would succeed, he must have a uniform standard of excellence in mind and must not only have the courage to follow his own convictions, but must work continuously and persistently for the realization of his ideals. Perhaps his ideals may never be realized, but if he can so mate the members of his herd that each generation will show an improvement over the preceding one he will gradually approach nearer and nearer to the desired type. If one would achieve the highest possible degree of success he must remember that such success cannot be attained without long and continuous effort, and he must be content to work year after year, if necessary, in order to secure the desired results. Patience and continued effort are the only sure sources of success.

G. H. Dimock.

COWS SHOULD FRESHEN IN THE FALL.

To the Editor of The Homestead:

Like every other great industry, progressive dairying is fast demonstrating the fact that only those who familiarize themselves with each detail pertaining to their vocation succeed. It is often the dairy farmer's unwillingness to face his own errors that stand between him and success. He does not like to give old customs for new, but prefers to trudge along in the same old track rather than take the trouble to familiarize himself with new methods and apply them in his business. Often we see a farmer who realizes from sixty to seventy dollars a year from each cow in his herd while his neighbor receives but little more than half that amount. The conditions of soil and climate are practically the same in both cases yet one farmer becomes richer while the other grows poorer.

You may wonder why this is, but the reason is easy enough to understand. One exercises a wider range of knowledge in the management and is determined to have the best that study and experience can give; the other is content to take whatever comes so long as he does not have to think for it. Dairying has been and is bringing many benefits to the American farmer.

It is enriching his soil, rendering it more productive and thereby adding to the money value of his farm.

It is a plain fact that the basis of improved dairying is selection of cows. Every farmer who is engaged in or expects to be engaged in dairying must remember that no matter how well fortified he may be against the difficulties with which the dairy farmer must contend if his cows are of an inferior grade much of his labor is thrown away. It would be a great advantage to a community if the farmers could come together and decide on some breed that would be adapted to their needs, then co-operate in the purchase of pure-bred sires for breeding their herds. The old practice of having cows freshen in the spring and go dry in the fall must give way to better methods. It has been proven that the best way of increasing the milk supply is by having a cow freshen in the fall, rather than any other time in the year. A cow naturally begins to fall off in flow when six to seven months in lactation. So a cow coming in in the fall or early winter reaches this condition when pastures are fresh and the feed good. This counteracts the natural tendency and through June and July she will hold her own with the cow fresh in the spring. The fall fresh cow is ready to begin to dry off as she reaches the dry weather, short pasture and flies of August and September. The cow fresh in the spring reaches this period at the same time that nature tends to diminish the flow. It is almost impossible to keep up her flow, and if the flow of milk is diminished for three or four weeks it can not be fully restored until she is fresh again.

Most farmers have more time to care for their cows during the winter months, and are by this method enabled to hire a man for twelve months in the year instead of eight or nine. To succeed in this system the farmer must have a supply of succulent feed, either roots or silage, and

I will say right here that in regions where alfalfa can be grown it is one of the most economical of dairy foods. Its yield is three to six tons to the acre, and where favorable conditions exist I have seen it yield seven and eight tons to the acre. Oats and peas combined also make a profitable crop, and the importance of corn silage as a feed for dairy cows cannot be overestimated. Considering that corn is the staple crop grown in the dairy district of the central West it is the best and most economical feed for either fat or milk production.

Wm. Sorenson.

HANDLING THE BULL.

To the Editor of The Homestead:

We frequently hear the expression, "The bull is half the herd." I believe this to be true, and further believe that of equal importance with the selection of the sire is the care and handling of the bull in service. On him, to a degree much larger than is generally supposed, depends the vigor and consequent future usefulness of the calf; on his own stamina depends his ability to transmit to his offspring health and strength and with them the physical characteristics for which the sire was chosen.

A liberal supply of strength-giving food, plenty of exercise and great care in his handling are all essential. He should have some grain the year round, of a strengthening rather than of a fattening nature. He should be fed in some degree with reference to the work his female offspring is expected to do. In other words, it has always seemed wise to me that wheat bran, oil and cottonseed meal should hold a prominent place in the ration of the dairy sire, while corn and other fattening foods should be fed more largely to the sire of beef animals. Corn, oats and wheat bran are available on every farm, or almost every farm; add to these plenty of good, sweet clover hay; use them wisely and the bull will be well fed. When silage can be had, use it by all means.

Exercise in plenty is necessary, absolutely necessary, for the bull, and if possible provide a tightly fenced yard or pasture lot for him and use it daily. If taken in time almost any bull can be trained to do work, such as drawing a cart or running a treadpower, thus adding to his usefulness and giving him, at the same time, the very best kind of exercise.

At an early age a ring should be put in his nose and from the first he should be fed and handled by it. It teaches him at once that man is his master and goes a long way toward establishing a gentle disposition. But the fact must never be lost sight of that however quiet a bull may seem to be, he is always an uncertain animal and should be watched. Failure to recognize this fact has been the cause of many horrible tragedies. It is best never to take any risks. It is not the part of wisdom to encourage the youngster to be playful with his head. Remember that it is but a short step from a playful toss to a hard blow.

The bull should not be allowed to run with the cows. It is bad for the cows, very bad for the bull and in many cases extremely unsafe. Allow only one service, never under any conditions more than two. This is one secret of long usefulness in the herd bull. It is a matter so generally overlooked and neglected that a large majority of the bulls in use today are worn out at the age of five years, when their real usefulness should be only beginning.

These few points apply to the breeder of the thoroughbred cattle and to the farmer who is seeking to improve a grade herd by the use of a good bull. To the man who is using a scrub bull I wish to say, by all means get rid of him. And never forget that scrubs will breed scrubs, no matter how well they are handled or fed.

Rist, a Successful Seedsman.

Nebraska has few men of the stamp of Frank J. Rist, Humboldt, Neb. Mr. Rist is a comparatively young man, yet he has attained a degree of success rarely found in one of the number of years. He has in fact grown up in the seed business and his early training has been supplemented with a liberal amount of schooling at the State University department of agronomy. Mr. Rist is now president of the Nebraska Pure Bred Seed Growers Association. He is offering choice seeds for sale, as per his advertisement on another page. Mention The Homestead when you write for prices.

TRADE in your old separator on account of a new DE LAVAL

An up-to-date De Laval Separator will, on an average, save its cost every year over any other separator.

In addition to the actual saving in more and better cream there is also the saving in time of separation and cleaning, in easier running, greater durability and fewer repairs.

Because of these savings more than 40,000 users of inferior and worn-out separators of various makes last year took advantage of the De Laval exchange allowance and traded in their machines on account of De Lavals.

USERS OF OLD DE LAVALS, on account of the many improvements in the modern De Laval over machines sold 10 to 25 years ago, including closer skimming, easier running, better oiling, etc., will also find it to their advantage to exchange their old De Laval for an up-to-date De Laval.

SEE THE NEAREST DE LAVAL AGENT. He will tell you how much he can allow on your old machine, whether a De Laval or some other make, toward the purchase of a new De Laval. If you don't know a De Laval agent, write to the nearest De Laval office giving make, number and size of your present machine, and full information will be sent you.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office

SYMPTOMS AND TREATMENT.

LAMPAS.

(1) What causes colts to have lampers or swelling of the gum? I have a three-year-old colt that is very much affected. (2) Have seen a yeast treatment for bringing cows in heat recommended, but the amount used has not been stated. Can you give me this formula?

(1) Lampas or lampers is a swollen condition of the bars of the palate just back of the upper incisor teeth and generally is caused by the irritation due to cutting of teeth. Gums may have to be lanced over incoming teeth, or milk tooth crowns removed. Give the colt some old, hard ears of corn to chew on daily. Do not have the swollen parts cut or burned; but swab them with strong alum water twice daily. (2) Use one cake of yeast to make a paste with a little hot water; then allow to stand in a moderately warm room; then add a pint of warm water, stir, allow to stand as before, strain and inject entire amount into the vagina an hour or so before breeding. It also may be injected once a week until the animal comes in heat.

WARTS.

We have a nine-year-old cow that has warts on two of her teats, also on her udder. They have been there about two years but are getting worse all the time. I feed corn, straw and corn fodder. Can you give me a remedy?

Rub the wart covered parts twice daily with best castor oil and the warts will soon disappear. Large warts with narrow neck may be cut off with scissors and the bleeding stopped by applying Monsill's powder or solution. The exact cause of warts is unknown.

RINGBONE.

A brown two-year-old mare got cut last August on outside of left hind foot just above the hoof, the cut three inches in length running around foot about one inch above hoof. I had this all healed up soon after, perhaps a month. There is an enlargement of the foot above the hoof and below the ankle, perhaps two inches running from back corner to hoof on either side around front of foot. Have tried blistering prescribed by veterinarian here but can see no benefit. It seems hard as bone to the touch. She is not lame. Any information will be received with thanks.

A ringbone apparently has formed and as lameness is not present blistering should not be repeated. If you keep cold, wet swabs upon the part the growth may be checked thereby. Should lameness be caused by the ringbone later on, puncture firing and blistering should be done, and a long rest allowed.

IMPACTION.

A three-year-old steer got sick with what seemed to be some kind of bowel trouble. He did not chew his cud and did not eat, but drank a little water. His bowels did not move and he died in six days. What remedy should be applied in such a case?

You should have opened the animal to make sure of the cause of death. Impaction of the paunch or intestines is due to the feeding of large quantities of roughage for a long time, without adding sufficient laxative or succulent feed to regulate the bowels. A full dose of physic, given at once, might have helped. A pint or more of castor oil shaken up in milk makes a good physic in such cases.

LAMENESS.

Have a five-year-old light bay mare that has been lame in the left hind leg for two years. There is a lump or enlargement all around the leg and the lump is hard. Last summer she got over her lameness, but the lump was the same. This winter she has been lame again and the flesh on the left hip has shrunk away. Can she be cured?

You do not state the location of the lump; but we take it to be either a bone spavin or a ringbone which will need firing and blistering by a qualified veterinarian. Then tie the mare up short in stall for a six weeks' rest.

RUPTURE.

I have a colt, which will be a year old in May, that has a rupture on the navel about the size of a large hen egg. Please prescribe.

Have a veterinarian operate by reducing the rupture, pulling up its sac and the loose skin and enclosing them between wooden clamps to cause sloughing; or he may prefer some other method of operating.

THUMPS.

My six-months-old pigs have some disease which is similar to thumps. They seem to have fever for about a week, then commence to run at the nose and breathing seems difficult. Sometimes they have to open their mouths to get their breath at all. What is the matter with them?

If true "thumps" is not present you will probably find that the pigs have quinsy sore throat. Separate well from sick. House comfortably. Rub throat daily with a mixture of one part turpentine and three parts raw linseed oil or melted lard. Throats should be sprayed with Dobell's solution; or a solution of peroxide of hydrogen. Flour sulphur may also be puffed into the throat. Feed milk and middlings in form of slop.

DEPRAVED APPETITE.

I have an eight-year-old registered Jersey cow that freshened on February 24th. I feed sugar cane and alfalfa hay and timothy occasionally for roughage, and ground corn, cob meal and oats. Her appetite is fairly good but every time she gets a chance she eats the rotten part of boards, sticks or any pieces of decayed wood that she can find. I give her salt in her grain every day. What can I feed her to stop that craving appetite for rotten wood?

Discontinue the feeding of cane hay and corn and cob meal. Substitute clover or alfalfa hay, silage and a mixture of cornmeal, bran, ground oats (screened) and oilmeal. Allow free access to rock salt. If the habit persists mix two teaspoonfuls of precipitated phosphate of lime in the feed night and morning.

ABORTION.

My sows are losing their pigs. Have carried them about six weeks. They have been running behind feeding cattle that have had all the silage they would eat with all the corn they would clean up in a half hour. The sows have been fed a thick slop of ground oats that were boiled and then fed cool. They are not too fat, as there were fifty-six hogs behind about thirty cattle. Do you think it is abortion? If so had I better sell the sows or

Horse-Training and Colt-Breaking

Prof. Jesse Beery, King of Horse-Tamers and Trainers, Will Send Horse-Trainers' Prospectus FREE

PROF. JESSE BEERY
World's Master Horseman

If you love horses and are ambitious to make more money, you will be intensely interested in the remarkable Horse-Trainers' Prospectus, which tells all about it. After a wonderful career as a professional horse-trainer, which brought him fame and fortune, Prof. Jesse Beery, acknowledged to be the World's Master Horseman, is devoting his time to teaching his noble profession to a few carefully chosen pupils, entirely by correspondence.

$1,200 to $3,000 a Year at Home or Traveling

Hundreds of Beery's graduates are making all kinds of money training horses, breaking colts, teaching horses to drive without bridle or lines. Owners gladly pay $15 to $25 a head to have their horses tamed, trained, cured of bad habits, or to have green colts properly broken. A good trainer can always keep his stable full of horses.

Is Your Horse Vicious, Tricky, Balky?

You can cure any horse of bad habits and actually double its value by this wonderful system. Everywhere are unruly, tricky, balky, dangerous horses—"not worth the powder to blow them up." These horses, by the Beery Methods, can quickly be made safe, useful, valuable.

Ignorance of the simple principles discovered by Prof. Beery has cost the lives of thousands. He tells his pupils the priceless secrets of conquering the most vicious "man-killers"—enables them to actually **duplicate** his most marvelous feats.

The Beery System Making Money for Thousands

Prof. Beery's graduates in all parts of the world are making money training horses, breaking colts, giving exhibitions, buying up cast-off "tricksters" and "man-killers," taming and training them and **re-selling at high prices.** For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional Horse-Trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy **a home and an automobile** solely through earnings from training horses as taught by your excellent methods." A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

CLIP THE COUPON, sign and mail at once for the Free Book, written by a man who won fame and fortune, thrilling vast audiences everywhere, by marvelous skill in training horses and man-killing stallions. Send the coupon today. Tell him about your horse. (44)

PARKE, DAVIS & CO.
DEPARTMENT OF ANIMAL INDUSTRY
DETROIT, - - MICHIGAN

would it be all right to breed them again in June for fall litters? As nearly as I can tell two-thirds of the sows have lost pigs. They got some of the silage, but it was not moldy. The oats were heated in a bin until they would stand alone, but they didn't get very moldy or do not smell very musty. What can I do for the sows?

There is every reason to conclude that the abortions have been due to the feed and there is no reason why the sows should not be retained for breeding. Moldy oats is sufficient to cause abortion. The cooked feed is unnecessary and possibly has not agreed with the sows. Keep them away from feeding cattle and feed light, laxative slop of sound feeds.

DIABETES.

I have a brood mare eight years old in bad condition. Every spring for the last four years she gets very thin but eats heartily all the time. Her hair turns the wrong way. In plowing she stops to urinate something like twenty-five times a day and about a tablespoonful at a time, very thick and the color of the yolk of an egg. She suckled a colt last year, but is not in foal now. Any information would be appreciated.

Moldy hay is a common cause of such urinary trouble. If your hay is poor in quality better feed wet oat straw, along with oats and bran. She will do better if you have her teeth put in order by a veterinarian and also have her clipped this spring. It would be well to give her a physic.

WEAK KNEES.

Have a four-year-old mare in good working flesh which has not been pulled hard this winter. Ten days ago I noticed a popping sound in her knee joints. The joints are not swollen and she is not lame. I can see the joints work back and forth as she walks. Please tell me what to do for her.

The true knees of a horse are the stifle joints, in front of which is the patella (knee cap). In weak colts the patella sometimes slips back and forth during action. Blistering or use of stimulating liniments strengthens up the parts in time so that the patella stays in place. The horse has to be kept tied up for a few weeks while under treatment. If you mean the knees of fore legs, the condition is unusual and one that we do not quite understand. Try hand rubbing three times a day and at night rub with liniment.

INDIGESTION.

I have some sows that root around and seem to eat their droppings as soon as it falls. I feed them ear corn, alfalfa hay, meat meal and a slop of shorts and ground corn. Can you tell me what causes it and what I can do to prevent it?

You are overfeeding the sows and allowing too little exercise. Stop feeding ear corn and also reduce other feed. Add roots to the ration and make the sows take plenty of exercise every day. Allow free access to wood ashes, charcoal and slaked lime.

BARRENNESS.

I have a heifer coming three years that does not get with calf. Is there any way of getting her with calf?

If the heifer is of common breeding and in good flesh you might as well sell her to the butcher, as there is no specific for barrenness and the causes are many and different. If you do not care to do this have the mouth of her womb opened an hour before service and meanwhile inject into her vagina two or three times a week a gallon of warm water containing half an ounce of pure phosphate of soda.

SWELLING.

I have a black mare fifteen years old. Last fall she had blood poison and it left a swelling in her hind leg between the ankle and hock. She limps considerably. She has been running out all winter. The blood poison was caused by the interfering of her back shoes. What treatment would you prescribe?

Hand rub the leg dry each time she comes into the stable; then wrap with cotton batting and bandage snugly. Allow her a box stall in stable. It is rare for such a swelling to cause lameness; therefore a careful examination should be made, as there may be some other cause, such as spavin or ringbone.

THIN MARE.

Have a bay mare coming three years old. Ever since last August she has been running down. She is very poor. I feed her twice a day on corn fodder and give her either oats or a good feed of corn. She eats greedily but her feed does her no good. She runs out during the day. She bites her legs as though they itched. She ran in a pasture all last summer and began getting poor there. Kindly tell me what to do for her.

Have her teeth attended to by a veterinarian and then have her clipped. Feed whole oats, wheat, bran and best of mixed hay. Feed the grain from a large shallow box so that bolting cannot occur. If she fails to improve give her half an ounce of Fowler's solution of arsenic night and morning.

Learn What You Buy

In his laboratory work of a lifetime and selling his various scientific products Dr. Hess (M.D., D.V.S.) has always taken our farmers into his fullest confidence. He believes that the farmer should know exactly what he buys. It is his belief that the more people that know what Dr. Hess Stock Tonic is made of the better. Then there is no mystery, no exaggeration—all claims that Dr. Hess Stock Tonic will increase growth and milk and relieve stock ailments can be verified by referring to the medical writings or the U. S. Dispensatory. The formula for

Dr. Hess Stock Tonic

Dr. Hess Stock Tonic contains:
Nux Vomica. Digestive and Nerve Tonic.
Quassia. Digestive Tonic and Worm Expeller.
Sulphate of Iron. Blood Builder and General Tonic.
Sulphate of Soda. Laxative and Liver Tonic.
Common Salt. Appetizer, Cleanser.
Epsom Salts. Laxative.
Nitrate of Potash. Stimulates kidneys.
Charcoal. Prevents Noxious Gases.
Fenugreek. Tonic and Aromatic.
The above is carefully compounded by Dr. Hess (M.D., D.V.S.), with just enough cereal meal to make a perfect mixture.

is printed in the left-hand panel here with extracts from the U. S. Dispensatory. Dr. Hess even goes further and makes this proposition: **Our Proposition:**—Feed Dr. Hess Stock Tonic to your horses, your cattle, your hogs and your sheep; especially when you are preparing for market. If you are not convinced beyond the shadow of a doubt that it has proven a paying investment by increasing digestion, improving the general condition and appearance, keeping your animals free from disease and free from worms, go to your dealer and he is under contract with us to refund your money.

Dr. Hess Stock Tonic in 25-lb. pails costs you $1.60; 100-lb. sacks $5.60. Only costs 6 cts. per month for the average hog.

Furthermore, for any condition which Dr. Hess Stock Tonic does not remedy, write us care of the Information Bureau and special prescription will be furnished you free of charge.

DR. HESS & CLARK
Ashland, Ohio

Dr. Hess Poultry Pan-a-ce-a

The ingredients of this poultry tonic are also printed on the package. Your druggist will tell you what beneficial effects poultry must derive from these ingredients. We guarantee it to make your hens lay more eggs, help chicks to robust maturity, shorten the moulting period and keep your flock hardy and well. Your money back if it doesn't. If your dealer cannot supply you, we will.

WE SELL OCEANA FARMS—GREATEST fruit county. Also Potatoes, Corn, Alfalfa, Stock. List free. HANSON & SON, Hart, Mich.

HINTS·SUGGESTIONS·DEVICES

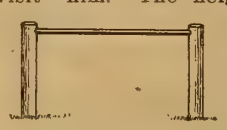
WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

A CONVENIENT TOOL BOX.

A handy tool box may be made out of eight-inch boards. Saw them three or four feet long or the length desired, one board for the bottom and two for the sides. For the ends saw pieces eight by eight inches with the upper edge extending to an angle. A rod may be extended from angle to angle of each end which may be used as a handle for carrying or lifting the tool box. This box can be kept in the house or shed and will keep tools nicely.

Put up a Good Hitch Rack.

As spring opens up the farmer will be inspired with a desire to do some improving about his place which will add to its attractiveness and convenience. There is nothing more beneficial than a good hitch rack in front of the home where the farmer can hitch his own team and his neighbors can also be accommodated when they visit him. The neighbor who is thoughtful never likes to hitch his horse to a fence for fear the animal may break the fence or hurt himself by jumping over it or getting his feet caught in a wire. Put up a good rack and the farmer who visits you will be glad to tie his horse there. A good rack can be made by setting two posts in the ground about ten or fifteen feet apart. Bore a hole in the top of each and insert the end of an inch or two-inch pipe. This will cost but little and will be very convenient and look well.

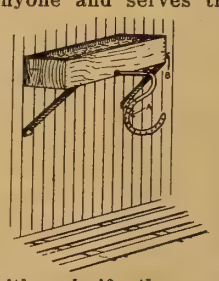


To Splice Timber.

The accompanying illustration shows a neat way to splice timber and after being spliced in this way it is as strong as it was before breaking. This plan is especially suitable for splicing tongues, etc. A is the block placed between the two center bolts to keep the tongue from pulling apart; B is an iron brace which for light or ordinary places may be supplanted by wood, and C represents bolts.

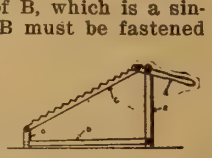
Homemade Shower Bath.

The homemade shower bath is a convenience which may be enjoyed by anyone and serves the purpose fully as well as the best city shower baths. The body or tank may be made of anything that will hold over five gallons of water. The circular tube is a piece of rubber hose with a number of holes cut in with a knife the correct size to suit the amount of water desired by the operator. The rubber hose, A, may be supported by a wire and to make it more convenient it would be well to supply a faucet between hose, A, and tank, B.



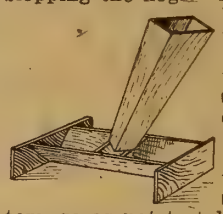
Wagon Jack.

A handy wagon and vehicle jack may be made at home which for ordinary use is better than the large, expensive ones, for the reason that with this one there is no adjustment and it will lift the weight of a wagon with ease. The end piece, A, is six inches high, consisting of two pieces, one on each side of B, which is a single piece. A and B must be fastened together very securely so they will not give. The two long back standards, E, may be made any length to suit the operator and E must be fastened to B with a single bolt to allow a free-turning joint. Figure C. shows a one-by-five-inch piece cut out to hold the object to be lifted, and D is the lifting handle. D, the lifting handle, must be bolted to E with a single bolt and attached to C with two small pieces of iron or wood which will allow a free-working joint.



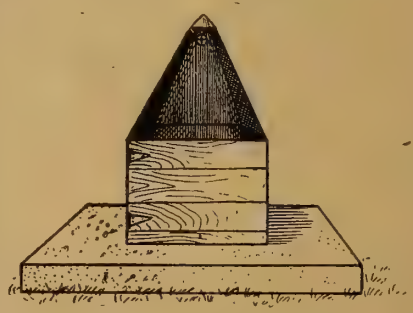
Hog Waterer.

Below is given an illustration of a handy device used in watering and slopping the hogs. The trough should be located near the fence of the pen, so that the feed may be poured into it from the outside. The spout leading down to the trough should be made small at bottom, so as not to take up room in the trough, while it should be big enough at the top to easily admit the contents of a bucket. By using this device none of the feed is wasted by missing the trough or pouring it on the hogs.



A Sanitary Well Curb.

A well house like the one below is a guarantee that impurities will not get into a dug well. The curb is set in a cement platform. This platform is built around the curb, thus holding it solid and preventing surface water from trickling down. The curb is made from matched lumber with a roof that has a sharp slope. The well wheel is hung on the center pole of the roof. The forms for the cement platforms are made from six-inch boards. The concrete is mixed half cement and half ballast. Apply three inches of concrete, then spread on a layer of hog wire. Put bent rods around all the corners. Apply the rest of the concrete. Smooth off well and let stand three days before removing forms. The well curb should have lids attached with hinges, these can be closed when the well is not in use, thus preventing dust from blowing down.



We do not believe in raising any crop in a young orchard between the tree rows. All the strength and moisture of the soil should go into tree growth. Sharing it with a crop often means a half failure with each.

$200

Takes possession of a fertile quarter section in

Southwest Kansas

There's not much vacant land left in Kansas. The five southwestern counties have remained unsettled and undeveloped because of inadequate transportation. The Santa Fe is building new lines to serve this territory, and thousands of farms next season will be put to creating wealth. This is your opportunity to get a good Kansas farm cheap. The terms are advantageous, the results certain.

If you had taken a Kansas farm ten years ago and developed it with intelligence and vigor, you, too, would now be lending money to Wall Street, as other Kansas farmers are doing. You, too, would have a piano in your parlor and an automobile in your barn.

The next best thing is not to lose this opportunity of securing a quarter section of this splendid wheat land.

Besides wheat, oats and barley, you can get good profits out of speltz, milo-maize and kaffir-corn fed to your own stock. Hogs thrive on milo and kaffir, and disease is unknown. Western Kansas farmers find peanuts a splendid hog feed, easily grown and easily fed. Broom corn brings fancy prices, and potatoes, garden truck, fruit and alfalfa will all do well for you.

There are some flowing artesian wells in this territory, and everywhere that wells have been put down water comes to within thirty to sixty feet of the surface. Irrigation by pumping will doubtless be commonly practiced, and the tremendously increased yields will pay big dividends on the small investment required for gasoline or oil driven pumps.

The climate is pleasant and healthful. Your boys and girls will find good schools. Churches, social clubs and farmers' institutes are being organized. Rural telephones and free delivery are coming in. In every way development is rapid, and only a few years will give you every advantage that older communities have.

You can secure a quarter section (160 acres) for only $200 down. The price is $10 to $15 an acre. The terms are astonishingly liberal. Only one-eighth down and one-eighth each year after the second year, with interest at only 6 per cent. You see you have two full seasons before a second payment on the principal is required.

For further information write for illustrated descriptive folder containing map and full details.

Santa Fe Land Improvement Co.
Topeka, Kansas

"Kuhn California Project"

In the Sacramento Valley

The canal, drainage and road construction completed, these lands are now being sold in small subdivisions. The soil, a deep alluvial silt loam, the best in the valley.

RAILROAD PASSES THROUGH THE LAND

Towns, Schools and Churches Near At Hand

CROPS—All kinds of fruits (including oranges and lemons); vegetables, seeds, berries, alfalfa, cattle, hogs and chickens.

WATER SUPPLY—Unlimited. Water delivered to boundary of every 40 acre tract. Canal and drainage system perfect.

TRANSPORTATION—Both by rail and river to the great metropolitan centers.

LAND PRICES—Low, and terms of payment easy.

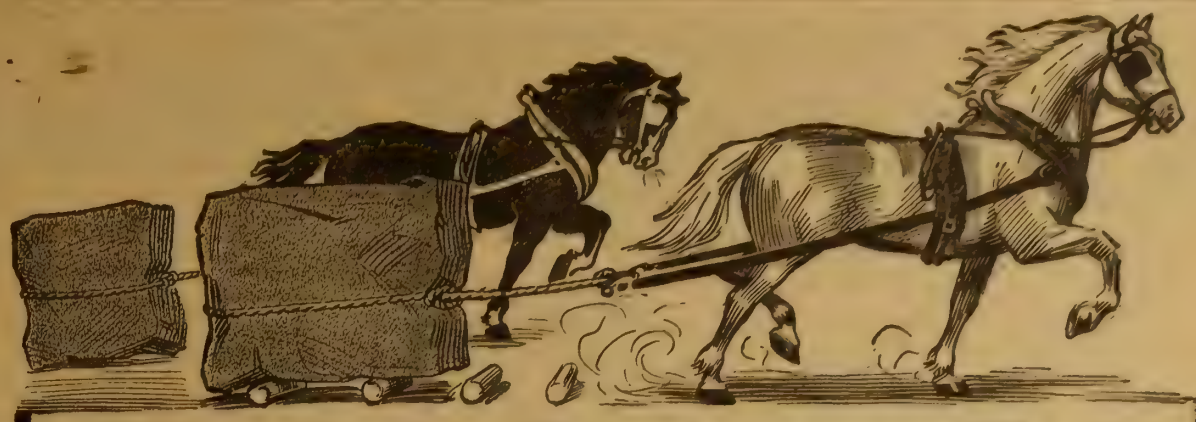
TEN YEARLY PAYMENTS

CURRENT EVENTS.

(Continued from page 8.)

The cyclone struck Omaha on Easter evening and the religious rejoicing was quickly turned to sorrowing and suffering. Neighboring cities quickly came to the relief of Omaha, but there was little that outside help could do. Already the sad task of burying the dead has been performed and the work of rebuilding the stricken city is well under way. Omaha is the natural gateway to the trans-Missouri west and has been built up into one of the proud and prominent cities of the grain belt. It will suffer only a temporary setback as a result of the cyclone and will soon be rebuilt, stronger and better than ever before. It is a stock-shipping and stock-slaughtering point of prominence.

THE Illinois legislative commission which has been investigating the woman wage problem, particularly as it applies to the social evil problem, has enlisted the aid of President Wilson. It is highly probable that a nation-wide investigation, under the authority and direction of congress, will follow the work of the Illinois legislature. Already more than a dozen states have pledged themselves to join hands with Illinois and investigate the extent of the evil resulting from the low wages paid to girls and women, particularly in the large cities. Iowa and Missouri are alive to the situation and although the problem is not so serious in either state it is expected that the investigations will be of far-reaching value. In Ilinois it is proposed to establish a $12-a-week minimum for women workers, although this sum is declared to be entirely too high by the large employers of Chicago, who assert that it will result simply in driving women out of employment and filling their places with men. A minimum wage of $9 a week is said to be acceptable to most of the large employers. Incidentally the whole investigation is being used as an argument in favor of equal suffrage, it being declared by the suffragists that were they given the right of the ballot the problem would disappear because of the fact that more attention would be paid to the needs of the sex as a whole in order to secure its support. Lieutenant Governor O'Hara, of Illinois, chairman of the Illinois Commission, believes that the greatest good will result, however, in raising the wages of men, thus making it possible for a greater number to establish homes of their own and thereby minimize the number of women wage earners.



Why Roller Bearings are Best

You know how much easier it is to draw a stone on rollers than to drag it along the ground. You have seen houses moved on rollers many times. Our mechanical engineers have applied the same principle to wagon building. They have invented and perfected an improved roller bearing with specially hardened steel bushing, for farm wagons, that runs ⅓ to ½ easier than the ordinary frictional sliding bearings. This invention has revolutionized farm wagon construction, and every wagon will soon have roller bearings. Official tests of Road Experts of U. S. Department of Agriculture show remarkable results.

Peter Schuttler Roller Bearing Wagons

Do One-third More Work and Do It Easier

because the roller bearings run so much lighter and require less power to pull the load. They save time—money—horses—harness—feed—repair bills—greasing—trouble, and wear on the wagon. They are much easier on the horses, and soon pay for themselves by economy of operation.

The Schuttler Roller Bearing Wagon is not an "all steel" wagon with steel wheels—but the "Old Reliable" Peter Schuttler Quality Wagon—the "One Best"—with standard wood wheels, steel axles, and our latest and greatest improvement—the Schuttler Patented Roller Bearing.

Write For Our Free Book

which explains the improved Schuttler Roller Bearing construction and gives records of official tests by United States Government.

GROWING SOUP BEANS.

To the Editor of The Homestead:

No farmer's wife need ever be without soup beans all through the winter season, as they are so easily grown in the summer. There is more than one variety of soup beans, the large white flat ones being our favorite. Any variety of the soup bean family may be grown successfully by planting them in the cornfield. Soil that will grow good corn will also produce soup beans. When corn-planting time arrives we go into the field and plant our soup beans in the richest soil the field affords, dropping one bean in every alternate hill until the desired amount is planted. The corn supports the vine, which is a rank grower and also a prolific bearer, bearing blossoms and beans from the ground to the top of the cornstalk. The only cultivation required is done when plowing and cultivating the corn.

One farmer's wife in our neighborhood raised twelve bushels of these beans besides those that were saved for home use. The twelve bushels were sold to a merchant for $3 per bushel.

Until a few years ago we grew the bunch navy bean for our winter supply of dried beans, but since we began growing soup beans in the corn we have entirely abandoned the navy bean. It takes a great deal more labor to grow the navy bean and besides they do not have so delicious a flavor when cooked as does the big white soup bean. Nothing in the vegetable line is better in winter time than a kettleful of these soup beans in which has been cooked a ham bone.

In the fall the beans which are the first to mature are those near the ground. These we gather in sacks or baskets and spread them upon sheets in the sun for a day or two. We then hull them out by hand and put them in a dry place until needed. Later on when those which grow higher up on the vine are dry we gather them also and treat them in a like manner.

S. E. M.

1,001 Knights of the Spalding Deep Tilling Machine

have told us in dollars and bushels just what deep tilling means to them. They relate their *actual experiences*—not their *theories* of deep tilling. In this mass of evidence are several letters relating to soil conditions similar to *yours*. Below are a few of these letters. If you want more deep tilling facts, write us for the book entitled, "1,001 Knights."

These Men Saw the Light

Alliance, Neb., Nov. 16, 1912.
In answer to your letter in regard to the Deep Tiller as to the effect it had on my crop, would say that the corn made 60 bushels per acre while that raised on the mouldboard plowing made about 20. That on the deep tilled land would have yielded 75 bushels if it had not been so thick on the ground. There was very near double the stand that should have been. I don't consider that this last summer was as good a time to show the merits of the plow, as if it would have been a dry season. We had double the rain we needed to make a crop.
We have done some fall plowing where we plowed with it last spring and it pulls considerably lighter than the first plowing did. I consider it the most profitable machine that I have and would not take $500 if I could not get another one. Yours truly,
(Signed) J. P. BARGER,

Fulton, Mo., Nov. 30, 1912.
Until last spring I had never seen real plowing. One end of the field was so hard and stony that no mouldboard plow could be held in the ground. The Spalding Machine cut its way through everything and left the surface in beautiful condition. It was so well pulverized that it was in much better condition undisced than was the shallow plowed portion after double discing.
It was easy to pick out the deep tilled corn from a distance by the vigorous growth.
C. J. SMITH.
Mgr. Mo. State Hospital Farm.

Highmore, S. D., March 29, 1912.
I used the one they had at the experiment station here on two or three acres of my farm last year. I had corn on that land this year, and winter wheat was sown in the corn. I observed last fall that the winter wheat on the deep tilled land showed at least 50 per cent better crop than the more shallow tilled land.
H. H. STONER
Supt. Farmers' Institute.

Spalding Dept. 68 GALE MFG. CO., Albion, Mich.

GET Longer Better & More WOOL

HIGH SPEED EASY ACTION

that will net you from 15c to 20c more on every sheep you shear with a Stewart No. 9 Machine. Don't labor with hand shears, in the old, hard, sweaty way. Don't have aching, swollen wrists. Don't scar and disfigure your sheep with uneven shearing and spoil the wool with second cuts. Take off the fleece smoothly and quickly in one unbroken blanket with a

Stewart No. 9 BALL BEARING Shearing Machine

and get a length and quality of wool that will bring the highest price. The Stewart runs so easily a child can turn the handle while you shear. Extra profits soon pay for it. It's the most perfect hand operated shearing machine ever devised. Has ball bearings in every part where friction or wear occurs. Has a ball bearing shearing head of the latest improved Stewart pattern. Price complete, including 4 combs and 4 cutters of the celebrated Stewart pattern, only ..... PRICE $11.50

Get one from your dealer, or send us $2.00 and we will ship C.O.D. for the balance. Money and transportation charges back if you are not pleased with it.

CHICAGO FLEXIBLE SHAFT COMPANY,
734 La Salle Ave. CHICAGO, ILLINOIS

Write for FREE catalogue showing most complete line of Sheep Shearing and Horse Clipping Machines.

The Best for Clipping Horses, Mules and Cows

Stewart Ball Bearing Clipping Machine

It's a valuable outfit that should be in every stable. Those who know the horse best have agreed that to clip him at the proper time improves him in every way. He looks and feels better, does more work, rests better and gets more good from his feed.
Insist on having the "Stewart." It's the easiest to turn, does the fastest work, stays sharp longer and is more durable than any other clipping machine made. Get one from your dealer, price only..... $7.50 or send us $2.00 and we will ship C. O. D. for the balance. Satisfaction guaranteed.

Wool Growers, Beware of the Tariff "Bugaboo"

Don't let this *tariff talk* scare you. Even though the tariff is being revised, you will get a good price for your clip, *provided you sell at the right time.*

To take care of our customers during this season of surprisingly quick-changing prices, we are going to send FREE Special Market Reports *frequently*, from now till September. These Special Reports will be authentic and reliable, being based on our 47 years experience, during which time we have become one of the biggest wool merchants in the world.

By watching our Reports closely, our customers can pick the best time to sell. Last year our customers made an average of 2c to 3c per pound more for their wool by following our advice. *This* year they will profit *even more*, as a result of our Special Reports.

Now, if you have as much as 200 pounds of wool, you can have your name put on our mailing list. You'll get our Special Reports, free, *all through the season.* You won't make the mistake of selling at the *wrong* time, or of selling to some buyer who, on account of the tariff agitation, is afraid to pay you the market price, or will scare you into taking less than the market value.

Remember, we charge nothing for this service. We place you under no obligation whatever. We must print about 50,000 Reports anyhow for our old customers. It's no particular trouble to print a few hundred extra for other wool growers.

Merely send us your name on a postal. Then, every time we get out a Special Market Report you will be remembered. You certainly can't *lose* anything by watching our Reports, and they may be the means of saving you a lot of money—*good, hard coin that rightfully belongs to you.*

This is no season to be selling wool to any old buyer at any old time. GET POSTED. If you send your name on a postal *now*, you'll get some interesting Wool News by return mail. (12)

Kill the ROUP Germ

Stamp out this disease in your poultry yard. Roup germs lurk in the drinking water, nests, coops, everywhere they can find a breeding place. **Stamp them out—use B-K.** Just put a few drops of B-K, the powerful, non-poisonous, colorless germ destroyer in their drinking water. Sprinkle the nests, floors, roosts, coops with a dilution of this wonderful germicide and you will Knock the Roup Quick. Try it at our expense.

WITH B-K Bacili-Kil (32)

Sample Free B-K is not only the best germicide but the cheapest to buy—the easiest to use. It is ten times as effective as clear carbolic acid, yet it is perfectly safe to handle and keep about the house. For Cholera, Gapes, White Diarrhoea, etc., it has no equal. B-K does not cause your hens to drink less or slack up laying. Send for FREE SAMPLE BOTTLE—try it without cost. The result will please you. Don't wait—send NOW—while you can get B-K to try FREE.

GENERAL PURIFICATION Co., 601 Pioneer Bldg., Madison, Wis.

WHY INCUBATOR CHICKS DIE.

THE book entitled, "The History of White Diarrhoea, or Why Incubator Chicks Die," will be sent absolutely free by return mail, to anyone sending us the names of 7 to 10 of their friends that use incubators. This book can save you $100 this summer. It describes white diarrhoea or bowel trouble. The cause and tells of a cure. **Book Absolutely Free for the Names.**

NOLAN LICE KILLER

Send for our booklet telling how, after many years of trial to secure a remedy for our own use, we found a successful exterminator of Lice, Mites, Bed-bugs, etc., on poultry and live stock. It is absolutely guaranteed and is now quite well known over the state. Endorsed by prominent breeders, fanciers and hotel keepers. The book is free. You will learn how to get rid of the vermin on your live stock and bed-bugs from your home. Address

NOLAN BROS., RUTHVEN, IOWA.

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

THE FIRELESS BROODER.

To the Editor of The Homestead:

Several subscribers have asked the writer to explain the fireless brooder mentioned in a recent issue of this paper. Some of the questions asked are:

Please tell me how to build a fireless brooder such as you mentioned in your recent article. Is the fireless brooder you mentioned patented? Have I the right to construct one for my own use? Explain the principle on which it is operated. Will it brood baby chicks without any application of artificial heat? What would such a brooder cost me and how long will it take to build one?

Compared with the more expensive brooders offered on the market, the fireless brooder is a homely looking affair, being constructed from a soap box or a few boards. We have made them in half an hour and have found that they will rarely cost over twenty-five cents each.

The best size for the fireless brooder is eighteen inches square and eight inches high. This size brooder will brood fifty chicks for the first week, twenty-five for the second week and fifteen chicks as long as they need brooding. After you have made the box part of the brooder, construct a frame of two-inch material that will fit in the inside of the box portion. Tack to this frame a strip of muslin so that it will sag in the center. Allow plenty of room to permit the muslin to sag properly.

Cut up an old quilt or small sack filled with cotton and place it over the muslin. This will aid in keeping the heat rising from the bodies of the chicks from escaping. As the weather grows warmer it is necessary to do away with this quilt altogether. You must use your judgment and do not use it on warm nights, or the chicks will lose all their feathers as a result of becoming overheated.

The fireless brooder is operated on the principle that the heat in the chick's body, if properly utilized, is sufficient to keep it warm, even during the coldest weather. By an application of sufficient "cover" this is retained and is ample to keep the little fellows comfortable. Because it is natural heat and is supplied in a way that cannot possibly injure the chicks, the chicks grow rapidly and are large and husky.

They are not bothered with a hen tramping on them or giving them lice and other pests to fight. They are given a fair start on life's journey which accounts for their rapid growth and development. The writer has had day-old chicks in these fireless brooders, when the coops and ground was covered with snow, yet they are as happy and contented as if it were a warm spring day. It is hard to believe this statement, we will agree, but if you will give it a fair trial, we are confident that you will use no other method of brooding next season.

It is necessary to provide some other shelter for the fireless brooder. It will not be at all successful if placed out by itself. You should either keep it in the barn or in some shed, or you can build a coop especially for the purpose. The coop should have plenty of windows and ample means should be provided for plenty of ventilation. This coop need not cost over $5 and it will last a lifetime. The chicks should be kept confined until they are at least three weeks old. If you allow them to run free from the time they are hatched, many of them will drop by the wayside and die, for they cannot stand wet grass or long tramps. They should be well feathered before you allow them their liberty.

The fireless brooder is not patented and everyone in the land that wishes to do so may make all he or she chooses without fear of infringing on the patent of any individual. Happily, the originator of the fireless brooder was a humanitarian and content to give something to humanity free of charge. Chesla Sherlock.

ENLARGED LIVERS.

The following inquiry has been received from W. R. Hukill, Appanoose county, Iowa.

Will you please tell me what to do for my chickens? The flock looks healthy, but two or three die every day. They droop around about twenty-four hours and then die. They are fat and in good condition. I cut one hen open and she was very fat and looked all right, except her liver was a little too large and the gall sack was very large. She had an egg with a hard shell on, ready to lay. They have had a good variety of feed all winter.

This trouble, hypertrophy or enlargement of the liver, is not so prevalent this winter as it was last year. The weather conditions have been more favorable, with the results that poultry of all kinds have been out of doors the greater part of the time, insuring fresh air and exercise.

Because your fowls droop around only about twenty-four hours does not signify that this is the beginning of the trouble. In the first stages it takes an alert care taker to detect

Remarkable Success With Incubator Chicks.

Dear Sir: I run several incubators and have good success with my hatches, but have lost thousands of the little downy fellows from bowel trouble. A lady recommended Walker's Walko Remedy, so I sent 50c (M. O.) for a box (postpaid) to the Walker Remedy Co., U9, Lamoni, Iowa. I tried it on 350 chicks and they grew very strong, being nearly full feathered at four weeks. I never lost one from bowel trouble. It is certainly fine for incubator chicks; gives them strength and vigor as well as preventing bowel trouble.—Mrs. A. D. Wells, Bolivar, Mo.—Adv.

the trouble. It is very deceiving, and especially so because the comb keeps a bright red; abnormally so at some stages of the disease.

This enlarged liver business is solely due to improper feeding and lack of exercise. When the liver becomes greatly enlarged there is no cure. In the early stages, epsom salts, one teaspoonful to three or four hens, dissolved in water and given by bending a baking powder can so as to form a spout and pouring down their throats is the best known remedy. Great care is needed to prevent strangulation. Withhold all carbonaceous foods. Feed a little wheat in deep litter, keep them away from the hogs at feeding time and give all the green feed they will eat, any kind of vegetables you have stored—cabbage, turnips or potatoes. For the flock the salts may be administered in the drinking water.

Our correspondent is to be commended for examining her fowls. It is the only sure way of determining inward troubles.

TELLS WHY CHICKS DIE

J. C. Reefer, the poultry expert, of 1630A Main St., Kansas City, Mo., is giving away free a valuable book entitled "White Diarrhoea and How To Cure It." This remarkable book contains some new scientific facts on white diarrhoea and tells how to prepare a simple solution that cures this terrible disease over night. Everyone interested in poultry should certainly write Mr. Reefer for one of these free books.—Adv.

POINTERS.

—Hawkeye Poultry Yards, Mount Pleasant, Iowa, have Belgian hares for sale. See advertisement in this department.

—Mrs. P. R. Coady, Melrose, Iowa, is offering Barred Plymouth Rock eggs for sale in her advertisement elsewhere in this department.

W. M. Black, Knoxville, Iowa, will guarantee satisfaction on his Buff Plymouth Rock eggs as advertised elsewhere in this department.

—Buff Plymouth Rock eggs are offered for sale by L. L. Woods, Grinnell, Iowa, in his advertisement appearing elsewhere in this department.

—"My flock of Single Comb Brown Leghorns," writes Miss Bertha Moyle, Hillsboro, Iowa, in furnishing copy for advertisement elsewhere in this department. "They have the run of the farm. They are healthy and vigorous and are headed by males of the best. I will ship nothing but strictly fresh eggs, well packed.

—O. E. Sutcliffe, Clarksville, Iowa, writes: "We have a grand flock of pure-bred Single Comb Buff Orpingtons from which we have culled all that were off in color or shape. They are a splendid laying strain. Eggs are dirt cheap at the prices we are offering them for." See advertisement elsewhere in this department.

—The advertisement of Mrs. J. F. Stolley, Granville, Iowa, offering eggs from White Langshans, White Plymouth Rocks, White Embden and China geese, White Mammoth Pekin and White Muscovey ducks will be found elsewhere in this department of The Homestead. Mrs. Stolley is quoting very reasonable prices on eggs from the different varieties of stock named above.

—The Evergreen Poultry Yards, Waterloo, Iowa, have an advertisement elsewhere in this department. In sending copy they write: "The eggs we are offering for sale are from our heavy-laying, prize-winning Buff Orpingtons. Our Ancona eggs are from our Chicago and Waterloo prize winners. Our mating list will be sent free."

—"I have some exceptionally fine birds that have won prizes wherever shown, and am better prepared than ever to furnish my customers with eggs this season," writes Mrs. T. A. Gough, Bristow, Iowa, who is offering Rose Comb Rhode Island Red and White Orpington eggs for sale in her advertisement that appears elsewhere in this department. "My utility stock has been carefully selected and is headed by scored cockerels."

—Mrs. James McNally, Victor, Iowa, has three pens of Barred Plymouth Rocks mated for this season's egg supply. Pen No. 1 is headed by a 90¾ Bradley cockerel mated to nine hens weighing up to nine pounds. Pens No. 2 and 3 are headed by 98 point birds. Her range flock contains hens weighing eight and nine pounds with cockerels good in both shape and color. One of her pens is new blood for old customers.

—Geo. W. Livingston, Monroe, Iowa, in sending copy for his advertisement, offering White Wyandotte eggs for sale that appears elsewhere in this department, writes: "We have some very choice pens and fine utility flock. The eggs we are selling are from stock scoring from 94 to 96 and not a cock or cockerel that is not standard weight or over. Our sales the past year were

Think of it! Uses Only One Gallon of Oil to a Hatch

UNITED STATES TIRES

will *cut down* your tire bills

The average mileage yielded today by United States Tires is from 25 to 50 per cent greater than that given by any make of tires previous to the formation of the United States Tire Company, two years ago.

Our own records prove this.
Every unprejudiced dealer in the country will admit it.

Ask your friends who are using United States Tires, how much more mileage they are getting now than they were getting in 1910.

Two years ago we predicted that concentrating the efforts and facilities of four of the world's most modern tire making plants, on the making of one line of tires, would result in the most radical reduction in tire expense ever known to the industry.

We have made good our prediction.

United States Tires have today come to be everywhere acknowledged as

America's Predominant Tires

The simple reason back of it is this—they have cut down tire bills.

In that respect. All eggs will be properly packed, little end down in H. & D. patented egg boxes, and labeled "eggs for hatching," to insure safe arrival."

—Chas. McCaskey, Ogden, Iowa, has a number of pens of Barred Plymouth Rocks from which he can furnish eggs at prices named in his advertisement appearing elsewhere in this department. Mr. McCaskey also has a few cockerels left.

—Edward Meyer, Dyersville, Iowa, writes: "I am prepared to furnish eggs from high-scoring, prize-winning Partridge Wyandottes and from extra large Pekin ducks of a good-laying strain." See advertisement elsewhere in this department.

—"My Single Comb Rhode Island Red pullets and hens are mated to extra fine quality males and fertility of eggs will be guaranteed," writes I C. Welch, Bedford, Iowa, in furnishing copy for his advertisement appearing elsewhere in this department.

—If wishing to purchase Mammoth Bronze turkey eggs the advertisement of H. U. Arthur & Sons, Spirit Lake, Iowa, that appears elsewhere in this department will prove of interest. They are offering eggs from carefully selected, big-boned turkeys all nicely marked.

—Mrs. Chas Lasley, Floris, Iowa, writes: "I have a fine flock of Rose Comb Brown Leghorns in the best of condition. Cockerels are new blood from a good strain. No stock for sale." Prices on eggs will be found in the advertisement elsewhere in this department.

—The advertisement of A. D. Murphy & Son, Essex, Iowa, offering eggs from Barred, White Buff and Partridge Plymouth Rock, Buff Orpington, White Wyandotte, Single Comb Rhode Island Red chickens and Mammoth Bronze turkeys appear selsewhere in this department.

—For thirty-four years Strater, Bros., Monroe, Iowa, have been breeding Barred Plymouth Rock chickens. Their flock is composed of birds having both size and qaulity. The price at which they are offering eggs is named in the advertisement appearing elsewhere in this department.

—James Jenson & Sons, Newell, Iowa, have a flock of 150 White Plymouth Rock pullets selected from 400 and mated with eleven-pound pure white cockerels from which they will be able to furnish eggs to Homestead readers at prices named in their advertisement appearing elsewhere in this department.

—F. L. Reinhard & Son, Ottumwa, Iowa, have advertisements in this department, one under the head of Single Comb Rhode Island Reds, one under the head of geese and one under the head of ducks. They are quoting prices on eggs from the three different breeds that will be of interest to Homestead readers who contemplate purchasing.

—Thomas L. Morlan, Indianola, Iowa, who is advertising eggs for sale elsewhere in this department, writes: "I have disposed of my surplus stock and am now offering eggs from strictly first-class Partridge and Buff Wyandottes for sale. I have three yards, 100 hens, headed by high-scoring males. My whole flock will average a score of 90½. Those wanting eggs should order early."

—Mrs. Isaac W. Black, Macomb, Ill., has been a breeder of Barred Plymouth Rocks for eighteen years, selecting each year her best layers for her pens. She has an elegant laying strain. Her Buff Orpingtons are good layers and are buff to the skin. She states that her Buff turkeys are the kind "that come home to roost." She writes: "The Homestead gave me the best results of any paper I ever advertised in. I could not nearly fill the orders for cockerels." See her advertisement elsewhere in this department.

—Elsewhere in this department appears the advertisement of H. C. Saunders & Son, Montezuma, Iowa, offering Barred Plymouth Rock eggs for sale. In furnishing copy they write: "This is our sixteenth year in the business. Care and attention to our Barred Plymouth Rocks make them the best we have ever had. They are large, well boned and of excellent plumage. They have free range of the farm." For prices and other information write the address named and mention The Homestead when writing.

—N. W. Scales, Iowa City, Iowa, whose advertisement offering eggs for sale appears elsewhere in this department, writes: "I have as good a strain of White Wyandottes in shape and form and as layers as any breeder. Our stock came from R. W. Wales' strain, one of the best breeders in the United States. My pen of show birds was selected by Mr. Wales and the cockerels at the head, so Mr. Wales informs me, could have won first at Cedar Rapids if I had shown him. My farm flock is almost as good, having cockerels at the head that would be a credit to any flock."

—Elsewhere in this department of The Homestead appears the advertisement of R. O. Dickson, proprietor of the Premium Poultry Farm, La Harpe, Ill. Mr. Dickson is a breeder of Indian Runner ducks, Single Comb White Leghorn and Barred Plymouth Rock chickens. He makes a specialty in Indian Runner ducks and White Leghorns and reports a good trade in utility stock. He is prepared to furnish several other varieties from nearby fanciers. He has about 150 Indian Runner ducks in five matings and will be able to take care of a large trade in eggs or baby ducks. The price at which he can furnish same and also baby chicks will be found in the advertisement above referred to. If interested write him for circular mentioning The Homestead.

The Men Who Make Big Ben

About 26 years ago a German clockmaker came from the East to La Salle, Illinois.

His only baggage was an idea—the plan of an automatic process he had invented, and which would make more alarm clocks and better alarm clocks than hand labor could ever hope to turn out.

With the backing of some local merchants and with a handful of clockmakers, a small factory was started on the edge of the town. —Beginnings were hard, competition intense. They weathered storms that would have knocked the fight out of weaker hearted men.

But when success at last came in sight they had built one of the best equipped clock plants in the world and one of the greatest names in the American clock industry—*Westclox, La Salle, Illinois.*

Big Ben is the ideal of the Westclox people. He is their conception of what a perfect alarm clock should be. He is only two years old, but in this short time 18,000 jewelers—70 per cent. of the total United States number—have already adopted him.

Only the finest materials are used in his making—he is strong, massive and punctual. His face is frank, open, easy to read. His keys, big, handy, easy to wind. He rings steadily for five minutes or intermittently for ten. He calls you every day at any time you say. If you have him oiled every other year, there is no telling how long he will last.

He's sold by 18,000 watchmakers. His price is $2.50 anywhere in the States, $3 anywhere in Canada. If you can't find him at your jeweler's, a money order mailed to *Westclox, La Salle, Illinois,* will send him anywhere you say express prepaid.

$1 90 FOR THIS DANDY GATE

These gates are not a special lot built down to a low price, but are full of the same quality, satisfaction and durability which can be obtained in any of our **triple-galvanized, high-carbon steel**

levy an additional sum, but the amount for the general township fund and the county road fund, must not exceed in any year five mills on the dollar on the value of assessed property.

RIGHTS OF CROPPER.

A Subscriber, Hurdland, Mo.—Last spring I rented land to a neighbor to be used for the raising of a crop of corn. Can he hold the land and pasture stalk ground until March 1st?

Answer.—In this case the tenant was a mere cropper, entitled to the use of the rented land until the crop was gathered, and no longer. A reasonable time after the crop was matured would be allowed for the renter to gather it, and after that time he would have no lawful right to possession of the land. He had no right to pasture the land at all. If by the terms of the contract the fodder or stalks, or part thereof, belonged to him he should have removed the same within a reasonable time after the crop was ripe.

MECHANIC'S LIEN.

Mr. M. E. Wood, Caldwell, Idaho.—A contracted with B to sell him a certain property in Iowa on monthly payments. B engaged C to make some improvements on the property, but failed to pay C for the same, and C filed a lien for his claim. The title to the property is in A and he knew nothing of the claim of C until notified of the lien. Is said lien good on the property?

Answer.—If C filed his lien within ninety days after making such improvements, the lien will hold good against the land.

RIGHTS OF LANDLORD AND TENANT.

A Subscriber, Garrett, Kan.—(1) Where a tenant on land does fall plowing, does that enable him to lawfully hold the land as tenant for the next year? (2) Has a landlord the right to put live stock on a rented farm and compel the tenant to take it? (3) What steps can a landlord take to have his tenant haul out manure and do other little jobs that are generally provided for in farm leases?

Answer.—(1) The mere fact that a tenant does fall plowing upon the rented premises does not give him the right to hold the same beyond the time when his term as tenant expires. (2) He has not. (3) A landlord cannot compel his tenant to do such things, unless it is so provided in the contract between them. All such matters should be agreed upon between the landlord and the tenant when the renting contract is made.

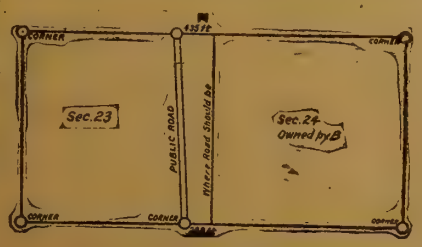
PARTITION FENCE—MISSOURI.

A Subscriber, Bland, Mo.—(1) Is the law in Missouri in relation to partition fences the same as it is in Illinois? (2) Please state the Missouri law on the subject.

Answer.—(1) It is not. (2) Where owners of adjoining land cannot agree as to the part of the partition fence each shall construct and keep up, either party may apply to a justice of the peace of the township, who must then summon three disinterested householders to appear on the premises, giving both parties three days' notice of the time and place, and the householders shall under oath designate the portion of the fence to be kept in repair by each owner. Either party owning land adjoining a partition fence may upon the failure of the other party to keep his part in repair, repair the same at the expense of such other party, and recover by law such expense, and also double damages for any injury caused by the failure of such other party to repair his part of the fence.

RECOVERY OF LAND OUTLAWED.

Mr. A. J. Wellfleet, Neb.—I own the east half of section 23 and B owns section 24, as shown in diagram. B does



not reside in Nebraska. Recently I had my land surveyed by the county surveyor and find that B has possession of 43.8 acres of my land. Good corners are on the northeast and southeast of section 24 and on the northwest and southwest of section 23. The public road is 435 feet too far west on the north line of the section and 288 feet too far west on the south line. There are corners where road runs, but where these corners should be has been farmed by B for several years. The party who laid out the road and did the former surveying owned the land now owned by B, about eighteen years ago. Can I recover my land by law, and if so how should I proceed?

Answer.—B and the former owner of his land, having held posession of the same for more than ten years claiming to own it, has the effect of giving B title thereto, so that your claim to the strip 288 feet wide at south end, and 435 feet wide at north end is barred by the statute of limitations, the law in Nebraska providing that an action for the recovery of title or possession of land can only be brought within ten years after the cause of such action shall have accrued.

PARTNERSHIP BUSINESS—WAGES.

A Subscriber, Beaver City, Neb.—A, B and C own together a half section of land in Nebraska. Half of it is used for pasture only, and the other half has buildings and improvements on it, and about ninety aeres under cultivation. It was agreed that C should move on this land and farm it, and care for a herd of cattle and some hogs, in which all are equally interested. C is to furnish one team, wagon and harness and all necessary farm implements and is to have all proceeds from as many cows of the herd as he cares to milk. He is to stock the place with chickens and have all the proceeds therefrom, and have also all proceeds from a garden and truck patch. A and B are to furnish one horse and harness each, and together they are to pay C a certain amount of money every month for performing their part of the farm work and caring for their share of the live stock. C is to furnish grain for the cows and chickens when it has to be bought. All of the crops raised on the farm are to be fed to the cattle, horses and hogs which are owned jointly by A, B and C as partners. (1) How much money should A and B pay C for his services? (2) Should he be paid at the same rate as though he were a disinterested party?

Answer.—(1) Your letter states that A and B are to pay C a certain amount of money every month for his services. This indicates that the amount C is to receive has already been fixed by agreement between the parties. If, however, the amount has not been so fixed by agreement, they should pay C what would be considered a reasonable compensation according to the general custom of the neighborhood. (2) C should be paid at the same rate as though he were a disinterested party.

INJUNCTION—FAILURE OF DEFENDANTS—COSTS.

A Subscriber, Corydon, Iowa.—About two and a half years ago a certain contractor called upon the township trustees and obtained permission from them to put in a culvert on the public road where I drive out upon it. I thereupon obtained an injunction to prevent the contractor from putting in the culvert. The contractor and trustees failed to prosecute the matter any further, and have dropped the case from the docket. Who is responsible for the costs for serving notice on the parties?

Answer.—You will have to examine the records of the court, and see what order was made as to costs, when the case was dismissed. In all cases where a case is dismissed or stricken from the docket of a court, it is the duty of the judge to enter in his minutes who is to pay the costs of the proceedings up to that time. In your case, as the case was dropped from the docket on account of the default or failure of the defendants to appear, they should be taxed with the costs and the judge's docket should so state.

It is a good idea to wait until spring is really and certainly here before disposing of the entire winter coat off the horses with clippers. Clipping is all right, but a good thing to remember since late springs have been the rule is to "wait a little while."

WITH THE EDITOR.

Mary E Wilkins' "Rebellion of Mothers," summarized here With The Editor some ten or twelve years ago, relates the strike of one woman. Edna Kenton's "Solidarity," published in the January Century, tells of the concerted strike of sixteen women. In the first story the mirror is held up to a single farm home; in the second it sweeps an entire county.

If "Solidarity" has a heroine it is Sadie Hope. It was she who initiated the proceedings which made Morgan county a seven days' wonder and revolutionized a considerable number of its homes. The story is remarkable and well worth retelling:

The secret of Mrs. Hope's survival of the summer before with its heat and its work had been the promise that before the next summer swept around with its added labors she would have the desire of her life gratified—a sink and running water in the kitchen.

Three times during the autumn Sadie Hope asked her husband timorously if the laying of the pipes had not better begin before the frost set in. During the winter she waited with what patience she could command, meantime carrying through rain and sleet and snow most of the water required in the house, although the pump was 300 yards from the kitchen door. It had been placed there years before that it might be conveniently near the barn. During the spring she waited on, but four times she gathered up courage to suggest that now, the ground being thawed, was a good time for the pipes to be laid.

Until a certain day in late spring Jim Hope's only reply to the reminders of his wife was a "H-m-m," uttered absent mindedly, as if her remark had not pierced to his inner consciousness. On this day it was different. A recent purchase, a huge motor harvester, the latest model, had just been delivered. As they stood before it Mrs. Hope became hopeless, but in desperation she asked if he weren't going to start laying those pipes for the kitchen right away. Hope was eagerly inspecting the new machine. For a moment he did not speak. Then, not brutally—he was not a brutal man—but quite decisively he said, "Why, Sadie, I reckon not this year."

The wife knew there was no appeal from her husband when he spoke in a certain tone, but she began to speak—"her words dripping from her:"

"I feel like I was goin' to drop dead this summer sometime without a kitchen sink, Jim. You haven't got an idea what it means not to have it, what it means to carry all that water every day. I won't let the children do much of it; I know what it does to my own back. And uphill to the house all the new harvester—I wonder how many hours a week I'd save with running water in the house, let stand the strength I'd have left at a day's end by turnin' faucets instead of bending under that weight of water all the way uphill! Lay me them pipes, Jim! It ain't goin' to cost you much."

Her voice trembled heart-breakingly along her throat; but Hope, busied with his first examination of the engine, failed to catch its quality, or, perceiving, chose to disregard.

"That new land cost too much, Sadie, for any more expense this year. It was all I could manage, this new harvester."

Leaving him absorbed in his new engine Mrs. Hope went despairingly to the house. Every nerve of her brain and body was quivering. She was at that state of nerve exhaustion where "the contemplation of a task ahead is more wearing than its performing could be, and already the burden of the coming harvest time was prostrating her."

Haying began in Morgan county on the day after the Fourth. It was three months away, but the woman could think of nothing else. Her distraught brain suddenly remembered that strange, worn, half-savage woman at the Holbrooke Farm, who several years before, right in the midst of the summer work, had killed herself and her three children. The vision of it all would come to her, even as she looked at her own children:

If it wasn't for the children I'd want to die, she groaned as she dragged herself up the hill with her brimming pails of water. Ten men to cook for, and all the washing—" she began, like a prisoner stupid under life sentence, to calculate vacuous things—the number of pails of water, for instance, that must be brought uphill during the summer to her hot, ugly workshop; and her disappointment became her obsession.

One day, about the middle of June, Hope proposed that his wife accompany him to a manufacturing town some twelve miles away. As they neared the place he said he wanted to call on the motor firm from which he had purchased his harvester. During the months since the arrival of the new machine Sadie Hope had nourished an unreasoning antipathy to the place from which it had come. The old rebellion seethed within her. She would not look at the motor works which had, as she felt, robbed her. She said she would get out and walk about the town. She did so. Walking about she lost her way and had to make inquiry as to her whereabouts. And thereby hangs "Solidarity."

It chanced that a strike was on in the glove factory. The girl of whom Mrs. Hope inquired the way was a "picket" who mistook her for a "scab." During the colloquy Mrs. Hope innocently asked why the girls, instead of striking, did not go to the factory owners:

"Lady," replied the picket, "did you ever try asking anybody in power for anything that would cost them a little money and would help you, and get it? But suppose you don't ask it alone—suppose hundreds and thousands like you ask it standing together, pledged not to back down—that's solidarity, standing together to win out on a wrong that you or I or anybody, standing alone, can't right."

Waiting at a department store for her husband Mrs. Hope picked up a stray newspaper and read a detailed account of the strike which in some vague way appealed strongly to her. On the way home she spoke of her adventure and of what she had read. Hope listened somewhat absent mindedly—a fashion he had when his wife was speaking, but commented, "Sure those mills ought to be shut down. A strike's the only chance; no use to try reason with the owners."

When they reached home, as he sprang out and held a hand to her, Hope said:

"Well, Sadie, this time next month we'll not be using this slow coach. We'll have a dandy new motor car—the dandiest little roadster you ever—"

Outraged his wife faced him.

"Jim," she uttered thickly, "do you mean you got another car for you, and me left with that old kitchen out there?"

"Now, that kitchen's done for this year," said Jim Hope, with a flash of sullen wrath. "Some time I'll get around to the house; till then, cheese it. You've turned real stubborn about that thing, Sadie."

She stared at him, her lips moving; then she turned and ran weakly up to the house, smothered by the old depression which was choking her.

(To be continued.)

HOME AND HOMEMAKING.

LITTLE HELPS BY THE WAY.

It is praise that lifts us! It is by praise that we live!
None of us are perfect—neither are any of us all bad.
There is so much good in the worst of us
And so much bad in the best of us,
That it ill behooves the most of us
To talk about the rest of us!

APRIL.

April is here!
Listen, a bluebird is caroling near.
Low and sweet is the song he sings,
As he sits in the sunshine with folded wings,
And looks from the earth that is growing green
To the warm blue skies that downward lean,
As a mother does, to kiss the child
That has looked up into her face and smiled.
Earth has been sleeping, and now she wakes,
And the kind sky mother bends and takes
The laughing thing in her warm embrace,
And scatters her kisses over its face,
And every kiss will grow into a flower
To brighten with beauty a coming hour.

Eben E. Rexford.

"THE GREATEST WOMAN."

"Who's the greatest woman in history?" was the query debated by Kansas school-teachers.

They considered Joan of Arc and Queen Elizabeth and Semiramis and Cleopatra, Cornelia, Catherine of Russia, Maria Theresa, Grace Darling, Susan B. Anthony and half a hundred others. When they came down to cases all the names known to fame were ruled out. And to whom do you suppose the judges awarded the palm? Here is the answer:

"The wife of the farmer of the moderate means who does her own cooking, washing, ironing, sewing, brings up a family of boys and girls to be useful members of society, and finds time for intellectual improvement."

CHILD'S PRATTLE.

While preparing her three-year-old daughter for bed, her mother on the discovery of a hole in her stocking exclaimed: "Why, Betty, there is a hole in the toe of your stocking."

Betty replied: "Yes, mother, but don't blame me, if my big toe ate a piece out of my stocking."

PREVENTION OF DISEASE.

Keep the mouth, nose, and teeth clean.

Bathe regularly, winter and summer.

Dress according to weather, not according to season.

Dry dusting moves dust, it does not remove it.

Don't let garbage and filth accumulate in your yard.

Do advanced preventive work against next summer's flies and mosquitoes.

If flies, mosquitoes, impure water and contaminated milk are responsible for typhoid and other diseases, why not remove the cause?

Every unvaccinated person is a fit subject for smallpox and a menace to the community.

Observe well established rules of hygiene. Keep your body in a normal condition, and you won't "run down."

Biting and cleaning the finger nails with the teeth has infection from kissing beaten to a frazzle.

Don't waste money on pastries and sweets. Eat good, plain wholesome food, and enough of it. A hungry man can't work, and a starving child soon peters out.

FOR THE COOK.

Breasts of mutton are economical if cooked in this way. Boil until the bones will slip out easily. When these are removed, lay the meat flat on a board and sprinkle with chopped sage and onion mixed with a few bread crumbs and pepper and salt. Roll it up, tie with string to keep in the stuffing, then brown in the oven, basting with dripping.

A nice dish is made of macaroni, cheese, tomatoes and cracker crumbs. Stew half a box of macaroni in salted water for fifteen minutes; then drain. Take one quart of tomatoes, fresh or canned, and put alternate layers of tomato, macaroni, cracker and cheese crumbs into a baking pan. Season with bits of butter, salt and pepper and bake one-half hour.

Pot roasts should be browned in a

The Spring Suit That Will Make Your $15 Go Farthest Now Ready at Clothcraft Stores

YOU have a right to expect a lot from a $15 suit. Beyond a perfect fit, you should have the inner qualities that count for durability and permanent shape—good cloth and scientific tailoring.

Clothcraft Blue Serge Special No. 5130 at $15.00 is made for men of taste who can't be comfortable in a suit that isn't just right in fit, style and quality.

We have had your measure since 1846. Clothcraft is the product of our 67 years' experience. The Clothcraft Dealer knows how to fit you. Clothcraft Scientific Tailoring takes the risk out of clothes buying, and gives you a suit that you can prove when you put it on—prove for fit with you own eyes, and for quality by the guarantee in the inside coat pocket.

In addition to Blue Serge Special No. 5130, Clothcraft is made in many other fabrics and colors, in all sizes and many styles at $10 to $25.

Every Clothcraft suit is guaranteed by both maker and dealer to be absolutely all-wool, and thoroughly shrunk. This guarantee further assures you first-class trimmings and workmanship, satisfactory fit and service.

CLOTHCRAFT

kettle on top of stove on all sides; then add two or three tablespoonfuls of water—just enough to "start" it; cover closely and set where it will cook very gently two or three hours. Turn often; season, and if necessary add a very little water, from time to time. The water should not be added for gravy until the meat is all done. Vegetables should always be put on to boil in plenty of boiling water, and if "underground vegetables," no salt in the water when boiled plain. But in soups and stews, boiled dinners, etc., always season before putting in vegetables.

Here is a tested recipe for a cake that keeps well, improving in flavor with age. Soak two cupfuls of dried apples and when tender add one cupful of raisins, one cupful of molasses, one cupful of sugar, a little cinnamon and cloves. Boil these to a sirup. When cool add one cupful of sour milk, one cupful of butter, two eggs and two liberal cupfuls of flour sifted two or three times. A teaspoonful of soda should be dissolved in the sour milk. Bake for two hours.

The best way to cook potatoes is to bake them, because, a dry heat being used, none of the food value is lost. Next in nutritive order is the boiling of potatoes with their skins on. Next comes steaming, which everyone should practice instead of the common way of boiling, because it wastes less starch, while giving the same kind of flavor and texture. Frying is the least rational process. Of the "fancy" methods "ricing" is one of the easiest and most attractive, and it has the great advantage of being useful for potatoes unfit for other uses.

AMONG OURSELVES.

Judges in our Home Department essay contests always have a difficult task. Their labors this time were more arduous than usual from the fact that one of the prizes differed materially in value from the others while as usual the quality of the articles submitted was in the case of at least a half dozen, almost the same. On advice being asked for, the word given was to use their own judgment, remembering only that the object of the contest is to stimulate interest and create demand for labor-saving conveniences for the farm household. In their report the judges possibly feeling that some explanation was in order, stated that first prize was awarded to the "iceless refrigerator" article because no greater difficulty confronts the farm housewife than that of doing without ice in hot weather; and that in deciding upon the other prize articles an effort was made that the four should treat of different things and the whole number present a sort of bird's-eye view of conveniences to be desired by the woman who would save her time, strength and energy and yet do her housewifely duty faithfully. Several articles not awarded prizes were mentioned as having special merit and these we shall present to our readers at some other time; today's program will present the prize-winning five:

OUR ICELESS REFRIGERATOR.

We live on a farm three miles from town. Nearly four years ago we built a new house with all the modern conveniences. The "guid mon" always said, "When I build I shall put in all the conveniences inside rather than 'ginger bread' on the outside." One of our neighbors who helped us during sickness remarked, "I never was in a house in which it was so easy to do the work." The one "convenience" without which I could hardly keep house, is our "iceless refrigerator." It is made of metal with wire gauze ventilators and never becomes stale, musty or rusty. It is round, thus avoiding corners, so hard to clean, and is fitted with removable wire shelves. It is lowered into a hole sunk four feet below the cement floor of the basement and requires just one-half minute to bring it up into the kitchen with crank, drum and cable. The temperature at the bottom of that hole is nearly the same as that of water fresh from the well, and everything put into it keeps in splendid condition. It saves innumerable steps up and down cellar and is a greater convenience than almost any of the others. The initial cost was $20 and we have no ice bills. Our town friends tell us they spend from $15 to $18 yearly for ice and then sometimes the ice man omits his rounds for two or three days—result, oily butter, sour milk, spoiled food, etc. In winter I use my iceless refrigerator just the same, as it keeps everything in fine condition and entirely out of the way. Ice for the farm is a problem and few farm homes are supplied. That is our reason for investing in an iceless.

Mary J. M. Stickel.

A QUARTET OF ENERGY SAVERS.

There are a goodly number of appliances now in common use, of which our grandmothers never dreamed in their day. First on the list, in my estimation, is the gasoline engine. By having a small building near the dwelling one can have it attached to the washing machine, the wringer, the churn, the separator and the pump, thereby saving a great deal of back-breaking labor. While the engine is running the washing machine one can be preparing the starch, rinse water and the many other things that must be done in doing the washing, and one can get a large washing over in half the time it would take to do it by hand. Then there is fresh water to be pumped every day in the week and every meal of the day and that an engine can do as well as do the washing. Next in labor saving is the vacuum cleaner. By its use there will be no everlasting dust when one cleans the rugs or walls or curtains, and certainly that is no small item in the work of keeping rooms clean. The bathtub is another great labor-saving article in every house. Where one can turn on hot and cold water and each member of the family take a bath before going to bed at night it saves a large amount of washing of bed clothes. Where there are men coming in from the field they cannot help being dusty and sweaty, and if there is no bath or water convenient their clothes will not stay clean half as long. Another labor-saving article that costs but a very little is the electric iron. There is no fuel to be brought or put in the stove, no fire to heat up the house on a hot day. I think that with it I can do the ironing for a fair-sized family as quickly as I used to do it for two when I had to gather up the fuel for ironing day.

Modern Mary.

MY LABOR SAVERS.

I have many articles in my home that are both time and labor savers, that enable me to keep my house in order and have more time for reading and sewing than formerly. I have a kitchen cabinet which places everything to my hand when cooking, thus saving many steps. My bread mixer I wouldn't part with, as I make just as good bread and with less trouble. My nine-year-old boy often turns it for me. Then I have a churn which churns in five to seven minutes as fine butter as I ever made. Our latest investment in the way of labor savers was the purchase of a vacuum cleaner for $6.50 and I consider it money well spent, for with it I can keep the dust out of my house the year round. Every other day I go over my carpets that are in daily use and once a week the bedrooms. The house cleaning this spring will be very light and really the price is very little, for you must pay a woman at least $1 a day in house-cleaning time. Last fall I cleaned three mattresses and a feather bed with my vacuum cleaner and it was surprising the amount of dirt it removed. Once a week I clean my window curtains without taking them down and it is just fine for cleaning a couch. Of course, there are more expensive cleaners than mine and they are probably better, still this one is in good condition after one year's constant use.

J. W. Leon.

CONVENIENCES POSSESSED AND DESIRED.

I thought I had nothing to write about, but find that I have several labor savers. We are renters, so will let that account for not having a water system, bath and laundry rooms, etc. I have a good six-hole range with fifteen-gallon reservoir (and a man to fill it). Also a three-burner wickless oil stove with two ovens, different sizes. A food chopper, which is also used for sausage and peanut butter making. My apple parer pares, cores and slices at one operation and is invaluable where they are many apples to care for. My kitchen cabinet I consider handier than a pantry, as everything is within reach without walking. A gasoline iron saves me many steps while ironing, besides saving fuel and being cool in summer. A mounted casserole is very handy for serving baked foods and saves the washing of an extra dish. Something I have never seen mentioned is a folding bench wringer with oscillating water board. This saves all changing of the wringer, but, of course, an extra one is needed for the washing machine unless you have a gasoline washer, which has its own. I know I am not the only woman Among Ourselves who does lots of her own carpentering, so if you others will get a hammer of your own you will find it very convenient. The things mentioned are a great help, but some day I hope to add a gasoline washer, a bread mixer, a dish washer, a fireless cooker and a cream separator to my labor savers. And when that "home of our own" is realized there are others that are not possible to renters.

Mrs. C. W. Lambert.

THREE THINGS HIGHLY VALUED.

The following three articles have been of invaluable assistance to me in keeping house: 1. A food chopper, price $1. With this I can in a few minutes chop or grind all meats, raw and cooked, vegetables, nuts, raisins, crumb bread and crackers, etc. I even run my soap through this chopper instead of cutting the bar of soap up with a knife. The food chopper saves me many hours of hard work and does the work better than an ordinary chopping knife and bowl. 2. A pair of scissors. There is no more useful article in the kitchen than a sharp, shiny pair of scissors. It is difficult, for instance, to slice off the slippery rind of bacon with a knife, but with the scissors every morsel can be quickly pared away without a vestige of waste. In preparing vegetables the scissors are incomparable. I use them in trimming rusty lettuce leaves, celery, cutting up asparagus, shaping flowerets of cauliflower, dicing pineapple, etc. I save my fingers by using the scissors to cut off fish fins and to cut up meat and fish for salad. The white pith of grapefruit, which is so hard to remove with a knife, is easily snipped with the scissors and then pulled out without trouble or mutilation. 3. A dustless mop. I made an excellent dustless mop from old stockings in this manner: Slash the stock-

Choosing the Right Paint

How to have the best-looking buildings in your township at moderate cost

Has it occurred to you that great progress has been made in recent years in other things than automobiles and telephones?

By scientific analysis of paint materials, by clear understanding of methods of manufacture and truer ideas of blending materials in the proportions that years of careful outdoor exposure tests have proved to be best—a properly equipped factory has come to know how to make a strictly high grade paint which will be approved by any painter or farmer.

An unwarranted prejudice still prevails with some people, who say that "when we mix our own lead and oil we know what is in the paint." So far as this goes it is true, provided the exact character of the lead and oil is known, which is seldom true outside of the most modern factory. And the lead and oil are mixed purely by guess, whereas tests in actual use have proved conclusively that to make good paint you must know that the materials come up to certain definite standards, that they are blended in the proper proportions, and mulled to a fineness that experience has proved to give best results.

You can really know more about the paint you use and have a greater assurance of getting good results by using paint made by an honest manufacturer of high grade paints, who has a reputation to maintain. When you buy Lowe Brothers "High Standard" Liquid Paint, you can know absolutely that it is going to give the most permanent beauty and lasting protection to your buildings

The advantages in using "High Standard" Paint are that while it spreads freely and goes further, at the same time it is of such character that it sets tightly in a coat of exceptional weather-proofing qualities—therefore giving better protection and lasting longer than other paints. It is not the price per gallon that you must consider, but the cost for the entire job and the cost per year of wear.

There is a "High Standard" paint dealer near you who can supply you with any of our products. If you don't know who he is, we will introduce you. There's a Lowe Brothers Paint, Varnish, Enamel or Stain for every purpose and the "Little Blue Flag" on every can is your certainty of satisfaction.

Valuable Paint Books—FREE

prevent damage to eggs, garden truck, trees, live stock on road to market. Make any wagon a spring wagon. Soon save cost—produce brings bigger prices—wagon lasts longer—horses benefited—thousands in use—"my wagon rides like auto" says one. Get a pair at dealers. If not at dealer's write us. Insist on Harvey's. 40 sizes—fit any wagon—sustain any load to 10,000 lbs. Catalog and fistful of proofs free.

HARVEY SPRING CO. 734 17th St., Racine, Wis.

ings in strings an inch wide and twelve inches long, forming a fringe. With the machine stitch several thicknesses of this to a strip of cloth three inches wide and ten inches long. Fasten this in a mop stick. Saturate the mop with a mixture of one part raw linseed oil and four parts gasoline, doing this, of course, outdoors. Hang the mop in the open air until the gasoline evaporates. It is then ready for use. This dustless mop saves me much time and many steps, as I can go over an entire floor in a few minutes and without going once to the door to "shake the dust." I also made a dustless dust cloth in the same manner, only smaller, and without fastening to a stick. These dustless articles can be used for a long time without being washed. When it becomes necessary to wash them they are again saturated with the mixture after they have been thoroughly dried. The dustless mops can also be saturated with a good furniture polish. This lasts longer, but is more expensive.

Mrs. E. E. Fitz.

These essays summarized recommend a list of things I should dearly love to see in every farm house in the land, and it is my very earnest hope that discussion of labor-saving household appliances will increase investment in them in the homes represented by this circle. Right here I think I shall take the friends into my confidence about something. The number of essays submitted in this contest was considerably less than usual and this in face of the fact that one of the prizes offered was much

When Dreams Come True

Dreams of a better, bigger home!
Dreams of more comforts, more luxuries!
Dreams of more of those things that make life worth living!
Dreams of—

But why dream?

Why not put Montgomery Ward & Co.'s new 1000 page catalogue back of your dreams and turn dreams into realities.

Why not harness every one of your hard earned dollars and make them yield for you more value in the future than in the past—and *then* your dreams will come true.

The conservation of the dollar is the vital issue in these days of high cost of living.

And the Montgomery Ward & Co.'s catalogue is the great text book that will help more than any other book to solve that problem.

It tells how to purchase your foods, furniture, clothing, farm implements, luxuries, everything for the home, farm or field at the lowest possible prices, with all the useless middleman's profit left out.

It has a thousand pages, with a hundred thousand opportunities for saving.

This great text book is free for the asking. All you need do is to write us a note today saying: "Send your new 1000 page book without cost or obligation to me"—and it will come by return mail.

You have had the dream of better living, of getting more comforts for all the family than you have had in the past. Why not let this dream come true. Why not send for the book today—Now, while you think of it.

MONTGOMERY WARD & CO Dept. T171
Chicago Kansas City Ft. Worth, Texas

more valuable than usual. This has puzzled me a good deal. Is it that few or our housewives have modern time and labor savers? Perish the thought! Is it that having them they are indifferent about inciting other women to obtain possession of like conveniences? Perish the thought! I am on the horns of a dilemma. Can anyone help me to a more comfortable place?

As announced last week, our readers begin with this issue to become acquainted with the wonderful happenings in Morgan county which Edna Kenton presented to Century readers in her story entitled "Solidarity." "Solidarity," as will be seen, has a bearing upon this question of household labor savers and modern conveniences. Without reflecting upon men in general, let alone men in particular, I believe that if With the Editor be read aloud while "Solidarity" is being summarized it would be a very good thing.

THE YOUNG FOLKS

GEMS OF THOUGHT.

Cheerfulness and content are great beautifiers and famous preservers of youthful looks.—Dickens.

ROLL OF HONOR.

Adaline, Allie, Bertie-ha-ha, Bowneyed Marguerite, Chin Whiskers, Christo, Columbine, Country Lass, Cousin Grace, Daisy Deane, Doris of the Brown Eyes, Ethel, Fernwood, Filbert, Franklin, Garda, Gratia, Happy Farmer Girl, Heki, Housekeeper, Ideal, Iota, Lanhod, Lamplight, Lylic, Minnesota Girlo, Mischief Maker, Miss Hap, Nebo, Olina, Patriot Girl, Phyllis, Redwing, Spit Fire, The Golden Maid, Uretta, Van, Zerlina.

These young people sent good literary or handiwork, signed in full, and written on but one side. Indiana Lass and Phyllis win pansy badges for three insertions on the Roll of Honor.

AN UNEXPECTED BATH.

Once upon a time my sister and I went on a daisy hunt, and when we came back we went by the windmill. We had a large tank and we kept fish in it. We had some bread along with us to feed the fish. Sister was upon the side of the tank, walking along, and I had just turned to go home and I said, "Come on." Just as she turned I heard a splash. I turned around and saw that she had fallen into the tank. I ran and lifted her out, and she was soaking wet all over and her doll, Earla, was floating around in the water. We hurried home, which was about a quarter of a mile and told our brother about it and he went back after the doll. When he got there it was still in the middle of the tank and still on top of the water. Sister got on some dry clothes and she never got on the edge of the tank again.—Heki, age 11.

PLEASANT FIELDS OF HOLY WRIT

Save for my daily range among the pleasant fields of Holy Writ I might despair.—Tennyson.

THE INTERNATIONAL S. S. LESSON

1st Quar. Lesson 1, Gen. XXVII., 22-34. April 6,'

JACOB AND ESAU—THE STORY.

This eldest and sweetest of pastorals keeps on with an ever-augmenting interest. Sarah dies in Hebron, and the striken patriarch mourns and weeps for her sincerely. After twenty years twin sons were born to Isaac and Rebekah. They are perfect contrasts in appearance, disposition and occupation. There was certainly some preface to the crucial scene before us. It was not wholly fortuitous. The way to it was paved. Esau's contempt for his right as first-born was the outgrowth of his impiety. The priestly office incumbent upon the inheritor of that vast estate so discounted it in Esau's eyes that he did not care a rush for it; he believed he could get a fortune by some other means. On the other hand, Jacob plainly saw his brother's unfitness for the chieftainship: how a great patrimony was in danger of being dissipated. The prophecy of his birth, too, was often whispered in his ear by a partial mother. He thought he must needs use human expedient to help God carry out his plan. The hand of Jacob, the heelholder, had often been stretched out before to trip his brother. A half dozen verses suffice for one of the finest portraitures of opposite characters to be found in literature. Jacob is at his tent door, seething lentils into a savory porridge of a red color. Esau, coming from the field, fatigued and too impatient to wait until the game he had taken could be prepared for him, cried: "Let the red (one) gobble up that red!" It is the will of a wayward man. Jacob steps between the kettle and the hunter. He makes the most of his opportunity. "Ah, Esau! he has his hand upon your heel once more." Esau's answer is pure Epicureanism. "Let me eat, drink and be merry—tomorrow I die. The

Bake Less Often —Save Work and Fuel

Occident Bread keeps fresh and moist and retains its fine flavor longer than any other bread.

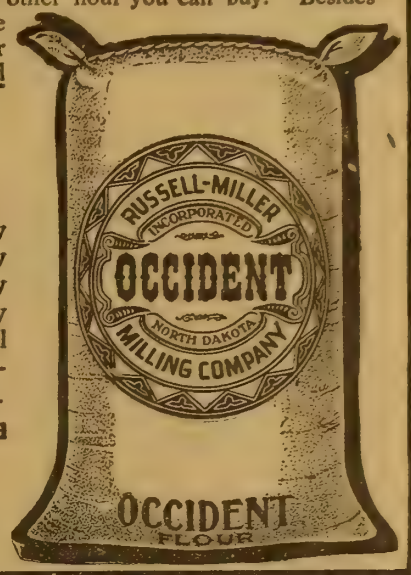
If you use Occident Flour you can bake a double batch of bread at one time. This saves the work and fuel cost of several baking days each month.

Won't you just test this on our Money-Back Guarantee?

The Guaranteed Flour

OCCIDENT

makes bread which stays fresh longer than other bread because Occident is cleaner than other flour. Every kernel of the wheat is positively washed and scoured by special machinery, and goes through more purifying processes than any other flour you can buy. Besides this extra cleanliness we use none but specially selected wheat for Occident Flour—the choicest bread wheat grown.



Costs More —Worth It

Occident Flour costs you only a few cents more than ordinary flour but we GUARANTEE every sack to please you better than any other flour you ever used—for all baking—bread, cake and pastry—or pay back the price of the flour.

Get a trial sack from your dealer and send for our free booklet, "Better Baking"

Russell-Miller Milling Co., Minneapolis, U. S. A.

Be Paint Wise this Spring

This means protect and beautify your home by painting, and prolong that protection and decoration for the longest possible time by using the right paint, one that starts its service by staying tight and strong through all kinds of weather—and gives the same good service for several years.

Such a paint is Sherwin-Williams Paint, Prepared, S W P. That is the decision of the largest number of people buying any one brand of paint. It is made of pure lead, pure zinc and pure linseed oil, combined with the necessary driers and coloring matter. It is thoroughly ground and mixed and put up in sealed cans, full U. S. standard measure. S W P not only covers the largest possible surface but also lasts for the longest time. It is just one of the Sherwin-Williams Paints and Varnishes made for various purposes about the farm, outside and in. Sold by dealers everywhere.

Send for our free booklet, "Paints and Varnishes for the Farm." It tells a most interesting story about the economy of wise buying, and which paint to use for different purposes, as well as why and how.

SHERWIN-WILLIAMS PAINTS & VARNISHES

Best dealers everywhere. Address all inquiries to The Sherwin-Williams Co., 583 Canal Rd., Cleveland, O.

birthright! I don't care a fig for it anyway." Esau eats, drinks, rises up, goes away—goes to oblivion, where he really belonged. Jacob rises to eminence, not, however, because of his unbrotherly craft, but in spite of it.

ONE YEAR OF THE FARM ADVISER.

(Continued from page 3.)

had no idea when nor where the seed was grown, and much of it was badly adulterated. Southern-grown alfalfa nor clover cannot be expected to do much good here. Seed too old will not grow well. One lot of alfalfa seed showed that sowing at the rate of sixteen pounds per acre there would have been more than 4,000 weed seeds sown on each square rod. I found red clover seed that showed eighteen dodder per square rod sown. We also found some seed as good as could be secured, and the Bureau is using every honest effort to assist in the sale of the best seeds, and using just as great effort to prevent the sale of poor seeds.

"We found that the law with reference to the disposal of carcasses of hogs that had died of contagious diseases was being violated, and have been insisting that every man who so violates the law be arrested and fined according to his offense.

"We found what some farmers thought to be a disease in alfalfa, but an investigation showed only the leaf hopper, and we could prescribe an easy cure. Maybe another did not know why his corn did not grow, and he did not see why, as the 'ground

"SAM" JORDAN DEMONSTRATING THE DIFFERENCE WROUGHT BY GOOD STRONG SEED AND WEAK.

was good,' but usually a look over the fence told the story before we did any digging. The little first blades were there and had been telling him all along, but the farmer had not been taught and did not know. Sometimes it was wire worms, sometimes root worms, and more often root lice, and when we would find his bugship or wormship, as the case may be, the first question was, 'What can I do?' and the answers to some are easy and others are not. Wire worms will pupate by and by, when it is pretty late to plant again, but for the season not much can be done. If root worms, don't put corn there next year. You cannot do anything now but just plow corn, and the same is true of root lice, the fighting must be done at another time.

"Maybe he does not know why his alfalfa died, but some blue litmus paper usually answers the question. In testing the soils for acid we found but one field in which the soil was sufficiently free from acid to make alfalfa growing successful. Up to the present time more than 300 tests have been made. Investigating the soils that were successful with alfalfa we found that lime or ground limestone had always been used in the early work with alfalfa; as a result, a few car loads of ground limestone have been applied, and we have several new trial fields of alfalfa put out the past summer. At the present time nearly every one of these seems to be giving much promise of success.

"One man's orchard was dying. The trees were about ten or twelve years old, orchard cultivated, but the trees showed a disease that attacks the sap layer, and the bark over it withers, and, of course, wanted to know what could be done. These trees were diseased when he put them out, and they were not true to name, so this means a loss and years of disappointment. So it goes from one end of the season to the other, and so the man who gets in close touch with the true situation and finds how rapidly the farmer is learning these things, and how anxious he is to learn them and the enormous importance to the welfare of the country that he does learn them, sees the county adviser idea, the greatest one ever launched in this county for the betterment of agriculture, and incidentally the betterment of every industrial condition.

"We found that the apple crop was perhaps the greatest in the history of the county. Every tree was loaded to its fullest capacity, and early in the fall farmers began coming to the office to inquire what to do with our apple crop. They had about made up their minds that to feed them to the hogs would be perhaps the most profitable way. I informed them that we would do our best to find them a market. I secured some interviews with some of the reporters on the daily papers and representatives of the metropolitan press, and those interviews were copied more or less over the entire country. As a result, within a short time I had correspondence from prospective buyers from eleven different states. We found many sections of the country with no apples at all. Many buyers came and would go into the country, and when they would see the quality of the fruit would become disgusted and take the next train away. Some of these buyers happened to find orchards that had been well cared for, and with fruit of a very high quality, but in nearly every case they discovered to their chagrin that the apples had already been sold. Thus it was that every bushel of good marketable apples found an outlet at a good price, where perhaps the loss from the orchards of the county on account of the apples being absolutely not fit for market approximated $10,000. As a result of this agitation the orchard men are considering the matter of combining their energies and by co-operation having their orchards properly sprayed and cared for. To get these men together and to assist them in carrying out their plans will be the duty that will fall to the county agent."

Nothing could have been more conclusive of the value of the work done in a single year, or more inspiring as an object lesson for others, than the "Get-Together" banquet at Sedalia. Only a few weeks ago the total membership of the Bureau of Agriculture was 270. On the day of the banquet, however, the membership had been increased to 525, while the auxiliary Home Makers Organization has a membership of 135. Already the two societies are planning for a home which shall include not only a demonstration farm, but also a commodious and comfortable building in which rallies and lectures may be held. Credit for this splendid record of one year belongs alike to Professor Jordan and Mr. M. V. Carroll, but without the co-operation of every farmer in the county the record would have been impossible to achieve.

OUR FASHION-DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5994 Lady's and Miss's Kimono.—This kimono can be made in either the long or short length. It can also be made with either the long or short sleeves. Any of the crepe materials can be used to make this garment, with the trimming of contrasting material.

The pattern, No. 5994, is cut in sizes 30, 32, 36, 40 and 44 inches bust measure. Medium size requires for the long kimono 4⅝ yards of 36-inch material with 1⅞ yards of 27-inch contrasting goods. If the short kimono is used it requires 2½ yards of 36-inch material with 1 yard of 27-inch contrasting goods. Price of pattern, ten cents.

6112 Miss's and Small Woman's Dress.—This dress is just the thing for the schoolgirl. The closing is made at the front. The skirt is a three-gored model and can be made with either the Empire or regulation waist line. Serge or linen can be used for this dress with the cuffs of satin.

The pattern, No. 6112, is cut in sizes 14, 16 and 18 years. Medium size requires 4 yards of 36-inch material with ¾ yard of 22-inch all-over and ¼ yard of 22-inch satin. Price of pattern, ten cents.

5911 Lady's Dress.—This dress is made with the new-style deep armholes. The skirt is cut in two pieces. The waist of the dress closes at the center of the back and the skirt closes at the left side. Voile or pongee can be used to make this dress, with the collar, cuffs and ruffles of satin.

The pattern, No. 5911, is cut in sizes 32 to 42 inches bust measure. Medium size requires 5¾ yards of 36-inch material, with 2¾ yards of 24-inch satin for the ruffles and trimming. Price of pattern, ten cents.

6066 Lady's Shirt Waist.—This waist is made with a removable chemisette and long or short sleeves. The sleeves are set in deep armholes and are finished with chic cuffs. There is a dainty turn-down collar and a frill of edging adds completion. Any of the pretty shirt-waist materials can be used to made this waist.

The pattern, No. 6066, is cut in sizes 34 to 42 inches bust measure. Medium size requires 2½ yards of 36-inch material and 1 yard of edging. Price of pattern, ten cents.

5660 Child's Rompers.—Every small boy and girl needs a pair of rompers and here is a good pattern for making such a garment. The closing is made at the back. Linen, percale or chambray can be used to make this garment.

The pattern, No. 5660, is cut in sizes 1, 2 and 3 years. Medium size requires 1¾ yards of 36-inch material. Price of pattern, ten cents.

This Makes Watches Vary

Unless Regulated to Offset Such Jars

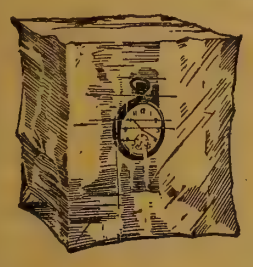
Bumps, Jars, Jolts and Shaking will ruin the time-keeping qualities of *any* watch that isn't *built* and *regulated* to offset these conditions.

South Bend Watches take six months to make and sometimes six months to test before they leave the factory. Then they are regulated to *your* personality by the expert retail jeweler who sells them.

The South Bend is the only watch made in America that is sold *only* through retail jewelers. You ought to *buy* your watch only through a retail jeweler, for then, and then only, can you *get that regulation*. Mail-order houses sell you a watch *only*. The expert retail jeweler sells you a good watch plus good regulation service. And this is the only safe and satisfactory way to buy a watch.

The South Bend Watch is hand and machine built by watch craftsmen — the most expert corps of watchmakers in America.

In the largest cities and in the smallest villages you will find at least one of the 15,083 jewelers who put their good reputations with ours behind the South Bend Watch.



Go see the nearest South Bend Watch dealer. Ask him to show you the watch that has 411 inspections, that is heated to boiling temperature, that is frozen solid in ice and *then* keeps absolute on-the-dot time.

Write for our free book, "How Good Watches Are Made." Brimful of interesting information about watches. Interesting — surprising — entertaining. Send for it today—now. You will get it by return mail, postpaid.

The South Bend Watch Co., 4 Ironton St., South Bend, Ind.

"The South Bend Watch"

The Original Air Cooled Engine

My Pride

I am proud of this engine. Ever since I placed it on the market more than ten years ago it has given good account of itself. From time to time I have improved it as experience taught me more about engines. Today I don't see where a single improvement is necessary. I sincerely believe the Original Air-Cooled engine the most economical and efficient of all farm power. I most heartily recommend it.
R. E. Olds, Pres.

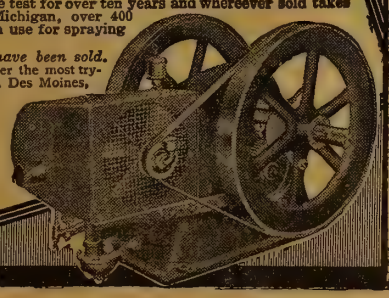
R. E. OLDS
Designer and Manufacturer

This engine was designed over ten years ago by the man who has *built* more gasoline engines and automobiles than any other man in the United States. The farmer needs a simple, reliable Air-Cooled engine for his work, an engine that can be started up on a moment's notice without the delay and annoyance of thrawing out or providing water for cooling. The Original Air-Cooled engine is simple in design, light weight for the power delivered, runs as steady as a clock and is sold under guarantee to cool when working under full load.

PUT TO THE TEST

This engine has been put to the test for over ten years and whereever sold takes the lead. In Allegan County, Michigan, over 400 Original Air-Cooled engines are in use for spraying and other farm purposes.

Thousands of these engines have been sold. They are giving the best services under the most trying conditions. N. M. Stark & Co., Des Moines, Iowa, have 15 standard cement mixers all equipped with 5 H-P Original Air-Cooled engines. *There is no work that requires a better engine than operating sprayers and cement mixers.* It is hard work all day with plenty of dirt to contend with. Drop us a letter or post card today for our latest catalogue.



THE ORIGINAL GAS ENGINE CO.
Dept. D, Lansing, Mich.

Fine Prize Pony Given Away

You see in this picture a boy riding one of the splendid prize ponies I am going to give away. In other parts of the picture are the faces of several other boys. They are rather hard to find, but by turning the picture about you can see them. Mark at least two of the faces with a cross (X) and send the picture to me. Be sure to send your name and address so I can tell you all about the contest in which you can win a beautiful pony and many other prizes.

1500 Votes Free

I will send you a special coupon good for 1500 votes toward the pony. All you have to do to get this coupon is to send your name and address at once.

PROF. W. H. STEVENSON PROMOTED.

Prof. W. H. Stevenson, who for the past three years has been head of the agronomy department of the Iowa Agricultural College, has recently been promoted by the state board of education to the position of vice-director of the Iowa Experiment Station. The duties of the new position will not necessarily interfere with Professor Stevenson's services in agronomy.

During the eleven-year period of Professor Stevenson's service in Iowa he has rendered a valuable service to the state. He has developed what might be called a new science, so far as Iowa is concerned, in the

W. H. STEVENSON.

close study he has made of the various types of soils. To him must largely be attributed the progress that has been made in recent years in the reclaiming of the wet lands. His department has performed a most important service to those regions in which drainage districts have been established and as a result of his work these districts have been able in most instances to cut their ditches at a minimum cost. Professor Stevenson is now undertaking a state-wide soil survey and in connection with this survey there will be established local experiment fields which will be used to determine what kind of treatment must be given to the various types of soils.

The state board of education in making this promotion has recognized the services of one whose work has been carried on painstakingly and zealously pursued in the interests of Iowa agriculture.

PUMPKINS AMONG POTATOES.

To the Editor of The Homestead:

Shortly after planting potatoes (or it could be done at the time of planting) we plant pumpkins in every other row of the patch, putting the hills abount every six to ten feet in the rows, two or three seeds to the hill. They are cultivated right along with the potatoes, care being taken while they are small and tender not to cover them up or break them off.

By the last cultivation, when the vines are beginning to run across the rows, they should be laid along the potato vines till one is through cultivating, when they should be laid back in their natural position. The thrifty vines soon overrun the patch, covering the ground and preventing the growth of weeds, which always spring up after cultivation where no other crop is planted. When the frost kills the vines, we rake them up and remove them from the patch, which leaves us a clean, open surface for digging the potatoes.

Sometimes we scatter turnip seed among the potatoes immediately following the last cultivation, raking them in with the hand rake or with a harrow that is not wide enough to tear and damage the potato vines or injure the tubers underground. At other times we sow millet, mowing it before it is thoroughly ripened and storing it away for winter roughage, for which it is a most excellent product. Again, we drill corn in between the rows of potatoes, putting it thick, so it will grow small, tender stalks for winter roughage, at the same make it an almost perfect, grain-and-roughage ration combined.

Cole Co., Mo. M. Coverdell.

A little difference in the salt makes—

a big difference in the butter

Combine Worcester Salt with the best cream and your product will lead them all when you cash in on your butter.

Worcester Salt isn't bitter. Its grains are fine and even—consequently work in rapidly.

It is tastier, saltier and more savory than any salt you have ever used.

It was pure salt long before the Pure Food laws were dreamed of.

WORCESTER SALT

The Salt with the Savor

Send us your dealer's name and address and we will mail you, free of charge, our booklet, "Butter Making on the Farm."

For farm and dairy use, Worcester Salt is put up in 14-pound cotton bags and 28 and 56-pound Irish linen bags. Good grocers everywhere sell Worcester Salt. Get a bag.

THE LIVE STOCK MARKET.

Union Stock Yards, Chicago, March 29.—The disastrous floods in Ohio, Indiana and in other sections east of Chicago have played a prominent part in shaping the conditions prevailing in the live stock trade during the week now closing. The cattle trade, which as noted in these columns a week ago, was on anything but a stable basis and ripe for declines, has been seriously affected by the disruption of transportation agencies over a large flooded area in Indiana, Ohio and Illinois, indirectly affecting an even larger territory further south and east. Shipments of both live stock and meats to Atlantic seaboard points has been seriously hampered, and the result has been very depressing, which will be in evidence all of next week and possibly longer. There is danger of a congestion of supplies during the coming week and light runs are imperative if present prices are to be sustained. Industry has been paralyzed over thousands of square miles of populous territory and a period of temporary stagnation is to be expected in the beef market which is peculiarly sensitive to such influences. A few days may radically change the situation, but congestion is the thing to be avoided for the moment.

Fortunately for the selling side, the week's cattle supply has been light, otherwise thorough demoralization of the market would have ensued. As it is the market is seriously in need of an apologist. Light and handy weight finished steers alone escape quotable decline and only choice goods of such weights have held fairly steady. Plain, medium and heavy steers are showing fifteen to twenty-five cent declines from a week ago. A slump in the feeder market has had its effect on all steers selling last week below $8.25. Country buyers, because of the restrictions placed on demand by crippled railroad service which eliminated buying for shipment to Indiana, Ohio and some other sections, have not been competing for $8 to $8.25 steers and relieved from this competition killers have hammered the low end of the price list hard and the range in values has widened. As predicted, heavy bullocks have become more unpopular, and as the season works along fat 1,300-pound and under bullocks will get much the best of the demand.

The best cattle here this week sold at $9.10, but $9 took a cut of the same qualitied steers toward week-end and the latter price is regarded as the present extreme limit of the market. Since Monday, comparatively few steers have sold above $8.65, and a lot of medium, light and plain heavy killers have sold here during the last few days at $7.65 to $8.25.

Feeder distribution has been paralyzed by the floods and declines ranging from fifteen to forty cents from a week ago have resulted, fifteen to twenty-five cents covering the loss in most instances. Until normal traffic conditions can be resumed, a big territory that draws its stocker and feeder supplies from Chicago cannot be served and this temporary restriction of demand must be met by curtailed receipts unless further declines are registered. A poor clearance has been made this week, although prices have been and are on a more attractive basis to prospective purchasers than at any previous time recently. The $8 quotation for choice selected feeders is debatable, $7.75 to $7.90 having bought a very desirable class here yesterday and today. Demand centers on quality and it is the chief price-working factor, rather than age or weight. High qualitied steer calves and yearlings are bringing as must per cwt. as fleshy feeders. Bulk of the fair to good 600 to 950-pound weights are now selling at $7.25 to $7.65, while $6.75 to $7.10 is taking plain light stockers and common feeders and common little stock steers are going downward from $6.50, few feeding heifers making $6.25, and a common light stocker sort going down around $5.50.

Butcher cattle have had a hard slump. It was coming to them, for everything in line of the stock and bulls has been relatively much higher than steers, and the decline in beef steers this week, together with the contraction in the outlet by reason of the floods merely accentuated the downward movement. There was a flurry early Wednesday in the trade for good fat cows and heifers and some selling at that period were as high as at any time this season, but the bottom fell out of demand before the close that day and sharp irregular declines have since been effected. Prime fed cows and heifers and low grade comers have been least affected but such are down ten to twenty-five cents, from the week's best levels, while all other classes show declines ranging from twenty-five to fifty cents and the bulk of the trading is on a twenty-five to forty cent lower basis than a week ago. Prime fat bulls are down ten to fifteen cents for the week, most butcher grades fifteen to twenty-five cents and bolognas twenty-five to forty cents lower, the demand for the latter being seriously curtailed by lack of shipping competition due to impaired railroad service to eastern points. Calf values have been pounded hard and further declines would not be surprising. Good to choice veals are selling at $9 to $9.25, against $11 to $11.25 a week ago and a $12 market for the best just before Easter. Quotations:

Apperson Apperson

The Lowest Priced Car

is not the cheapest car. For a moderate price you can get a lifetime car at the lowest cost of upkeep, in the

Apperson "Jack Rabbit"

How long will a cheap car last? Nobody knows.

Each buyer runs his own risk. None of them are over 4 or 5 years old.

The "Jack Rabbit" will last at least 20 years. We can assure you of that. There are Apperson-made cars still in use 17, 18 and 19 years old. When you consider how much more perfect and reliable than these are our cars of later years, you can understand what Apperson reliability means.

Not one "Jack Rabbit" has ever worn out. The average age of the 17,000 Appersons in use is already 8 years and constantly rising. There's no limit to the durability of the "Jack Rabbit." It is the lifetime car.

How much will a cheap car cost for mechanical upkeep?

Another uncertainty. You may be fortunate and get off easy. The repair shops are full of such cars. The junk-man is making a fortune out of them.

A "Jack Rabbit" car costs practically nothing for mechanical upkeep.

In spite of the fact that there are many relics of the earliest days of motoring among our cars still in use—the average cost of mechanical upkeep is only $5 a year. Other cars average $20 and over—and these are comparatively new cars

The "Jack Rabbit" is economical of fuel and easy on tires.

If you haven't money to waste, better look into this question of upkeep thoroughly. You can't afford a car if you have only enough means to get a **cheap car**

Write for the "Jack Rabbit" Catalog Today.

The Adriance Binder

For Over Fifty Years a Favorite the World Over

The above reproduction from a photograph shows an **Adriance Binder** in use in Siberia where thousands of **Adriance Binders** and **Mowers** are giving excellent service under most trying conditions.

In all parts of the world this time tested Binder is growing in favor, more and more each year.

It is growing because it is a better binder than any other. Gives better service—is more simple in construction—lighter draft—costs less for repairs. Its design is such that it works easier—without the strain and wear of other binders, consequently less time lost and less breakage.

Its materials are the very best and every wearing part has been carefully and scientifically designed to produce the greatest durability with lightness of draft.

FOR LONG OR SHORT GRAIN FOR HEAVY OR LIGHT CROPS

The Adriance Binder will handle long or short grain, heavy or light crops equally well. It can be instantly changed, without the driver leaving his seat, to bind grain anywhere from 20 inches down to 7 from the butts, making a square butted, well-tied bundle in every case.

ADRIANCE BINDERS GIVE BEST SERVICE FOR LONGEST TIME AT LEAST EXPENSE.

Adriance Harvesting Machinery

Fills 60-ft. Silos With Ease!

The day of the skyscraper Silo is here. No Silo too high for the Smalley! Mr. H. E. Williams, Clinton, Wis., says: "The Smalley No. 18 Force Feed cutter with chain drive blower did fine work. We filled one silo 14x35 feet in 8 hours with 8 teams hauling the corn." When C. I. Cook, Menominee, Mich., wanted to fill the 4 biggest Silos in the U. S. he got a Powerful "Smalley." Real business farmers like Messrs. Williams and Cook have no time to fool with the old slat-apron type of machine. They want this **force-feed chain-table, grip-hook** kind, made by Smalley only. Thus they save a **tremendous** amount of work and do a **quicker, cleaner** job. No coarse, uneven silage. All **uniformly cut.** Which means greater tonnage per silo.

POWERFUL SMALLEY FORCE-FEED SILAGE CUTTER

not only handles **green** silage, but is also a wonder at cutting **dry feed.** Handles alfalfa, for instance, **to perfection.** Letters in catalog prove it. Many farmers use their **Powerful "Smalley"** to cut corn in the fall and oats and peas in the spring for feeding when pastures dry up in July. Only one drive pulley on Blower outfits. No Idler to oother with. Ten per cent steel guaranteed in all foundry castings. No oiling by hand—hard oil cups on all important bearings.

You won't know what a **real** Silo Filler is till you've seen the **Powerful "Smalley"** or had the Smalley Catalog. Why not send a postal this minute for the latest Smalley Catalog and learn about the Silage Machine that four out of five silo owners now use? Write **now** and you'll get this **fine,** useful Book **by return mail.**

Acute scarcity alone is responsible for further elevation of hog prices this week. Prices are now on a twenty to twenty-five-cent higher level than a week ago, though five to ten cents lower than last Wednesday when the market hits the highest levels recorded since September, 1910. Some further advances during early April do not seem improbable, but with hogs now costing $1,500 to $1,600 a car, it does not seem a time for the dissemination of bullish opinion. An expansion of the marketward movement after oats seeding and another when corn planting is completed, is looked for, while in May eastern hogs will begin running and shipping demand, which has been the stout prop under the market all winter, will diminish. Yet, a high market all summer is more than probable. Cholera reports continue to come in from Nebraska. The disease has been raging all winter in that state and prediction is made that both Omaha and Sioux City will have light runs throughout the summer. Only 270,000 hogs reported at the six leading western markets during the first five days this week and for the year to date the shortage in receipts at these six markets is about 1,130,000 head.

Chicago packers profess not to be worried over light lard stocks. "At no time during the winter packing season," says John Roberts, of Roberts & Oake, "was it profitable to cut hogs with a view to making a maximum quantity of lard, as the money was in meats, but as soon as the spring pig crop is weaned the country will fatten sows, and corn being cheap and abundant, the weight making process will be carried to the limit. There will be big money in the conversion process, and once the summer run of 'widows' starts, lard will pile up rapidly. The Chicago market closed Friday on the following basis:

Pure-Bred Seed Corn.

Petty Bros., Liberty, Mo., breeders of pure-bred seed corn have this year the choicest lot of sede corn they have ever produced. Their Yellow Dent and Clay County White varieties are not excelled for yield and quality. They also raise Reid's Yellow Dent and Petty's Early Eclipse and when they have sold that produced on their own farms they have no more to sell until another year so order early. Each variety is grown on a separate farm and every precaution possible is taken to keep each pure. This year they will ship ear corn in sacks thus saving the cost of crate to the purchaser. Last year Petty Bros. sold all their corn early in April and during the latter part of the month hundreds of dollars in drafts and money orders were returned, so do not delay placing your order if you want Petty Bros. seed corn.

The Beautiful Moore Corn Book.

C. Ray Moore, "The Man Who Does Things With Corn," on the famous Sunkist Farms, adjoining Kellerton, Iowa, has written a corn book which, in its beauty of makeup and its ability to intensely interest any good corn grower, is a real gem. Mr. Moore, starting as a poor farm boy who had to learn the practical side of corn growing in the school of "hard knocks," has attained to an education in scientific corn breeding and development, and is becoming nationally known as a originator of high-yielding strains of farm seeds, especially seed corn. His corn book tells in the author's unique, original style how he rose from obscurity to success in corn breeding work; and describes the steps by which he perfected a strain of corn that has yielded exceedingly well. On Sunkist Farms he has built modern seed houses in which he dries early fall selected seed ears on rack driers of his own design. He has a characteristically striking announcement elsewhere in this issue in which he offers his corn book free to corn growers. Look up the announcement and write for a copy today.

Percheron Horses.

Dec. 9, W. S. Corsa, Whitehall, Ill.
Dec. 10, A. L. Robison & Sons, Pekin, Ill.

Percherons and Belgians.

Apr. 17, Frank S. West & Son, Wood River, Neb.

FIELD NOTES.

A good Shire stallion is offered for sale or exchange by Perry O. Brown, Lamoni, Iowa, elsewhere in this issue.

Any reader of The Homestead desiring to purchase a Scotch Terrier male, in age not over four, or a good male pup should read the advertisement, the address of which is Lock Box 37, Riverside, Iowa, that appears elsewhere in this issue.

W. H. Bryson, Lake Fork, Ill., will sell a draft of sixty head of Short-horns from his Forest Home herd Tuesday, April 29th. Forty-five cows and heifers and fifteen bulls will be offered, full particulars regarding which will be given in later issues.

The Hereford herd of Taylor & Welty will be dispersed at Wanatah, Ind., April 29th. Sixty head of good producing cattle will be sold, particulars regarding which will be submitted later. Applications for catalogs should be filed with Taylor & Welty, Wanatah, Ind.

On page 35 of this issue of The Homestead will be found the advertisement of Jas. H. Duncan, Lineville, Iowa, in which he is offering for sale heavy-boned Poland Chinas of both sexes and an age. He also has Barred and White Plymouth Rock chickens for sale.

Geo. S. Redhead announces in his advertisement on another page that he is making a specialty of selling Jersey bull calves in crates. Shipment in this manner can be made at greatly reduced prices. Mr. Redhead guarantees safe delivery and offers a line of breeding which is superior from a producing point of view. He also has one mature herd bull and two yearlings. Address Geo. S. Redhead, Des Moines, Iowa.

Short-horn Cattle Wanted.

Elsewhere in this issue will be found the advertisement of Perry O. Brown, Lamoni, Iowa, who is offering a good Shire stallion for sale or he will trade him for good registered Short-horn cattle. If you have the cattle you can make a good deal with Mr. Brown. Write him at once.

Baker's Angus Bulls.

Matt Baker, Mitchellville, Iowa, is advertising two Angus bulls that are of the herd-header kind. Both are double Blackbirds and are sired by the double Blackcap bull, Black Opal 125453. One is out of Blackcap of Leaside and the other is out of Blackbird of Cloverland, for which Mr. Baker paid a long price. These are extra well-bred bulls and Mr. Baker says they are as good as their breeding. See his advertisement elsewhere and write him mentioning The Homestead.

Russell's Holstein Sale.

The 200 head of Holstein cattle that T. H. Russell will offer at public sale at Geneva, Ohio, May 1st and 2d, will be one of the greatest lots of dairy cattle ever offered at public sale by one breeder. Mr. Russell has one of the largest herds in the country, headed by four of the best sires of the breed, hence is able to place before the public a very attractive offering. Mr. Russell has recently added to his herd the great bull, Pontiac Hengerveld Parthenea, sire of the senior four-year-old world champion cow and several thirty-pound daughters. This gives him four strong sires at Idle Hour Farm, the other three being De Kol Hengerveld Burke, Crown Prince Segis and Count Cornucopia Korndyke. So many outstanding sires cannot be found at any other breeding establishment, and when one considers that nearly all of the 200 females to be sold May 1st and 2d are either by one of these bulls or else bred to one of them, the worth of the offering is at once apparent. There will be cattle in this sale to suit you, the progeny of high-class sires from A. R. O. dams and many of them having records. Mr. Russell does not do things except in a broad-gauge way and he wants it thoroughly understood that every animal in the sale will be a choice selected individual, free from blemishes and guaranteed right in every way. Further particulars regarding this sale will appear in later issues. Write today for a copy of the catalog to T. H. Russell, Geneva, Ohio, mentioning this paper.

C. A. Saunders' Bulls.

Those of our readers who are going to be on the market for a good young Short-horn bull should write or go and see C. A. Saunders, Manilla, Iowa, as he is offering some good Scotch and Scotch-topped bulls for sale. A number of these will make splendid herd bulls and they are bred in the purple Make it a point to go and see these bulls just as soon as you can as the demand is so strong at the present time that they will not last very long. Please mention The Homestead when writing him.

Briggs Bros. Offer a Couple Choice Duroc Boars.

Briggs Bros., Seward, Neb., have for sale a couple of herd-heading fall boars. These are not the ordinary sort, but real herd headers, both from the point of individuality and breeding. They will also be hard competition to beat at the shows next fall. Our readers in the market for something of this sort will do well to write as above for full particulars and mention The Homestead. The writer knows the stock offered and we do not hesitate to recommend them to the stockmen looking for the best.

Good Hereford Bulls for Sale.

If you are on the market for Hereford bulls make it a point to read the advertisement of A. Spooner & Son, Mondamin, Iowa, elsewhere in this issues, and then go and see them at once. They have 100 young bulls for sale, all ready for service and bred in the strongest blood known to the breed. They can fill your order for a car load if you want that many and it is about the only place where we know you can get bulls just now, and it therefore behooves you to go and see them at once. They will also spare about a car load of cows and heifers.

HIGH-CLASS HEREFORDS AT AUCTION.

IN SALE PAVILION

SOUTH OMAHA, NEBRASKA,

WEDNESDAY, APRIL 16, 1913

SIXTY-FIVE head of extra select cattle from some of the most prominent herds in America will be offered. These cattle are all of desirable ages and of the very best breeding obtainable. There will be fifty choice young bulls, ready for hard service and in perfect health. The females are young breeding cows and either with calf at foot and bred again or ready to calve. H. J. Fluck, Goodenow, Ill.; W. H. Leslie, Auburn, Ia.; A. W. Elliott, Reynolds, Ill.; C. Bengen, Mynard, Neb.; J. C. Hatz, De Witt, Neb.; J. C. McNerny & Son, Coin, Ia.; W. N. Rogers, McCook, Neb.; Guy Schwab, Murray, Ia.; G. E. Stryker, Rising City, Neb.; C. T. Bailey, Lowell, Ind.; O. J. McCullough, Clarks, Neb.; Ben Broughton, Lake View, Ia.; H. A. Rogers, McCook, Neb., and E. H. Gifford, Lewiston, Neb., are the men who consign this offering. Their names are sufficient guarut some excellent polled specimens are Most of the offering is horned, but some excellent Polled specimens are listed. Keep the date and place in mind and plan to attend. Write for catalog today, and when doing so mention The Homestead. Address

W. N. Rogers, Mgr. - - - McCook, Nebraska.

Cols. Callahan & Zaun, Auctioneers.

NEXT WEEK'S SALE PROGRAM

Tuesday, April 8 } Aberdeen Angus, Walter Roberts' Estate, Atlantic, Ia.

Thursday, April 10 } A. C. Shallenberger, Alma, Neb.

When you write them kindly mention The Homestead.

McLaughlin's Short-horn Bulls.

A splendid Scotch bull is being offered for sale by W. M. McLaughlin, Shelby, Iowa, in Amercian Goods, that good son of Imp. Choice Goods. This bull has been at the head of his herd, and as he wants to retain his heifers he has made up his mind to part with him. Should someone desire he might consent to sell his splendid Jasmine bull that he bought of Charlie Daws. At any rate he will sell one of these two bulls, as he does not need all of the herd bulls he is now using. He also has ten young bulls for sale. When writing him kindy mention The Homestead.

West & Son's Horse Sale.

A dispersion sale of Belgian and Percheron stallions and mares that is of national importance is the sale that will be made by Frank S. West & Son, Wood River, Neb., on April 17th. The Hon. Frank S. West is retiring from the business and as the son, Raymond H. West, is now in the Nebraska legislature, these gentlemen have decided to close out their entire stud. The writer has known much of this stud for the past few years and we were always pleased with the class of stuff handled, and the manner in which these gentlemen did business. We also believe that the horses offered at this time will be a better offering by far than has ever gone out from this stud before. A couple of years ago these gentlemen made the best auction sale of draft horses ever held in Nebraska. There were buyers from several states, and the class of horses put up merited the competition which made that sale such a success. The offering for the present sale is much better than the one at that time, and the readers of this paper will overlook an opportunity to secure high-class horses if they fail to attend. The noted Belgian stallion, Attraction de Zulte 51974, will be offered in this sale. He is now rated among horsemen in Belgium as one of the very best ever produced. His get have been persistent winners in all of the big shows of the old country, and the press of that country and high officials express regret that this horse was ever allowed to be exported. The writer is of the firm opinion that this horse would sell for double the money in the old country that he will bring here, but he is going to sell anyway, and without reserve or protection. This is the place to buy a horse to head that pure-bred stud. We do not know of a better one. There will also be offered some very high-class Percheron stallions included. Among the number is the excellent Percheron stallion that has been in use in this stud. He is just such an opportunity for the breeder of pure-bred Percherons as the Belgian is for the breeders of that kind. We know of no better, and we would advise those looking for the very best to attend this sale. The mares are one of the best offerings ever sold in the West anywhere. Big boned, sound and clean. Many just from the old country long enough to be acclimated. The greater part of the home breds included are equally this offering is imported stock, but valuable. Make a special effort to be on hand for this sale and we would urge that you send in your names at once for the catalog which will be sent without delay. Mention The Homestead when you write.

Chester White Sows.

G. O. Satre, Jewell, Iowa, is offering some bred Chester White sows for the late trade in a new advertisement starting this week. This name is a new one to breeders, but the herd contains blood lines of some of the best-known Chester White men. The foundation stock comes from the great sow of the American herd of Alden Anderson, at Ellsworth, Neponset Queen, and Mr. Satre has chosen boars of good individuality with breeding to match, for service. One other feature of this herd is the fact that the entire lot of sows offered are thrifty and healthy, giving assurance of profit-making qualities in the hands of new owners. They are bred to Iowa Pride 8th, a Hoover-bred boar from some of the best lines of his breeding. The sows represent much of L. C. Reese's breeding on the sire's side and one, Iowa Peach, is out of a sow, White Blossom, by Keep On, dam Fancy Belle, names remembered by those who were familiar with the 1911 show cards. Write in for bargains on sows. Address G. O. Satre, Jewell, Iowa. Advertisement elsewhere in this issue.

Geo. Allen & Sons' Short-horn Sale.

We are this week calling attention to the sale of Scotch pedigree Short-horns that will be made by Geo. Allen & Sons, Lexington, Neb., at South Omaha, Neb., on April 22d. In many respects this is one of the greatest sales of Short-horn cattle that has ever been held in the West. It contains an unusually choice lot of grand producing cows, right in the very prime of life, and also a choice lot of excellent younger things. With one or two exceptions everything is of breeding age, however, and every cow that sells with a calf at foot or in calf is bred to a bull of the very highest order. Many of the cows with calf at foot are bred again, and to the new man in the business this sort of cow should especially appeal. Many of the older herds, as well as the newer ones, could profitably use some of these good cows and heifers, and we certainly recommend them to all in search of good cattle. Few herds of pure-bred cattle in America have been so builded as this herd. Few men in the business of breeding choice cattle of any bred are so well adapted to the work as George Allen or his sons. It takes years of patient effort, fixed ideals and a natural inclination for this class of work to make for the success that these gentlemen have attained. George Allen was trained to the business in the old country, he has employed the methods of the very best of the old country breeders and the results are manifest. Such cattle as will go in this sale are worth a great deal more to the American stockman than cows that have been mated promiscuously. They are worth more for the reason that they have been bred right, that no inferior crosses have been allowed and this work is worthy of reward. The cattle from this herd make good. The writer has seen them in many hands and under many different conditions and they were invariably of the right sort. Every year a better lot has been offered, and those that sell at this time are better by far than those sold a year ago. The stockmen of the corn belt will not be dealing fair with themselves if they fail to attend this sale. The writer is familiar with this breed, with most of the leading men in the busniess, and we know whereof we speak when we say there is sterling worth in every member of the catalog. There are herd-heading bulls in this sale. As good a bull as we have seen sell at auction in many years if ever sells in this sale. Others that might be preferred by good judges, however, but poor selection will not be made, for they are not offered. We would like for every reader of The Homestead interested in good Short-horns to send for the catalog. It will be sent to all who apply and mention The Homestead. A catalog of such pedigrees is published but very, very few times a year and you should have this one.

Beall & Jackson Offer Choice Poland China Boars.

With this issue of The Homestead, Beall & Jackson, Roca, Neb., are starting an advertisement in which they offer a choice bunch of fall boars. Those of our readers in search of choice Poland Chinas will do well to keep this herd in mind. The writer has been in close touch with this herd since its founding, and we wish to say that none but the very best of sires and dams have been used at all times. At present a son of A Wonder, a son of Sampson and a son of Big Price 2d are in use in the herd. These boars are of the right sort, and the A Wonder boar, called Nebraska Wonder is one of the best breeding A Wonder boars we know of. His get look especially good to us, some of them being as choice as any we have seen thus far this season. The best fall boar that we have seen this season, or in fact for a long time is in this herd. He is by Nebraska Wonder and out of the great producing sow, O'Connell's Wonder by the 1,000-pound O's Jumbo, and she is out of a daughter of B g Tecumseh. This boar is of September farrow and will weigh about 300. He is not fat however, but just a great big boar, with excellent back, the very best of feet and legs, and as heavy boned as any pig of his age that we ever saw. This boar is the right sort to head an extra high-class herd and should be a good breeder, coming as he does from such a line of ancestors. Another young boar, almost as good is by Nebraska Wonder and out of a daughter of the noted Jumbo Jr. by Nebraska Jumbo. This boar, Jumbo Jr., is the head boar in the herd of Albert Smith & Sons, Superior, Neb., breeding big boars in the country. This young boar we mention we would recommend to any of our readers looking for a first-class pig. He is going to be a big one, and, of course, is not filled out as smooth as some might look for, but we know what is back of him, and we predict that he will be better than a 900-pound boar at maturity if properly cared for, and smooth enough to please the most exacting. If you want something good, order this pig. A little mate to the one first described might suit some better as he is a pig of more width and not the making of quite so large a hog, but neverthless the making of a mighty good one. Those looking for a little more quality and not quite so much scale will be pleased with him. This herd of Polands is one that we wish our readers to keep in mind, for the men in charge of it are "old timers" in the hog business and our readers may well look for good stuff from this herd. Address these gentlemen at once and ask for full particulars concerning these fall boars.

and remember that they are really good. A few extra choice gilts will be bred for fall litters, and orders for same will have to be sent early, as only the ones ordered will be bred. Spring boars will also be sold soon, and at very attractive prices. Parties living at great distances should ask about them, as the express charges will be light. Be sure and mention The Homestead when you write.

The Great Short-horn Bull, Comet, Changes Hands.

Wm. Arrowsmith, Exeter, Neb., owner of one of the choice herds of Short-horns of central Nebraska, recently purchased the great Scotch bull, of Con McCarthy, York, Neb. This bull is a beautiful roan and sired by the noted Snow Flake. His dam was one of the choice young cows of the Everett Hays sale at Hiawatha, Kan., at the time of its dispersion. Mr. McCarthy has used Comet in the herd for some little time, and the line of calves that he has got at that farm is a good indication of what he will do in the herd of Mr. Arrowsmith. Mr. Arrowsmith has been using a son of Red Champion for some time, and also has a few cows by that great Scotch bull. Mr. McCarthy is now using a Lavender Clipper bull, and he is now doing some good work. These herds are both among the very good ones of the state, and the writer is glad to know of this sale, as it puts a good bull in the hands of Mr. Arrowsmith, and he was not now needed badly by Mr. McCarthy. Each of these gentlemen has a choice young bull or two for sale. Should you write them, kindly mention The Homestead.

Phillips Offers Fall Poland Boars.

C. W. Phillips, New Sharon, Iowa, one of Iowa's best-known breeders of big-type Poland Chinas, starts an advertisement in this issue of The Homestead, offering a number of August and September boars of the big type. Four of these are sired by Big Bone 3d, a grandson of the noted Big Bone and out of a Long King sow. The balance are sired by Long King's Superior, one of the best boars old Long King ever sired. Long King's Superior is two years old and has a wonderful depth, is very thick and as smooth as you get them. He is probably the best boar Charlie Phillips ever owned and is bound to make a mark in the Poland China world. Now is a good time to buy a son Long King's Superior at a very reasonable price and get the benefit of the advertising that is bound to come to this great boar. Mr. Phillips will sell these boars at $25 each for the next thirty days. Anyone in need of a boar should send him a check for $25 and he will send you a boar worth the money. Upon the arrival of the pig if you are not satisfied you can return the pig and Mr. Phillips will gladly refund your money. This is as fair as anyone could possibly be and Mr. Phillips is a man to stand back of every statement he makes. Look up the advertisement and write him mentioning The Homestead.

Rogers Hereford Sale at South Omaha.

The sale of Hereford cattle made under the management of W. W. Rogers, McCook, Neb., and held at South Omaha, Neb., each season has always been one of the foremost Hereford events of the season. Mr. Rogers is a sale manager with but few equals, as he has the interest of the breed at heart, and only solicits such consignments as are high class and a credit to the breed. He also is a man of wide experience in the Hereford cattle business and is well acquainted with a great number of men interested in the good cattle and will under no consideration accept consignments of other than good cattle. The names of the men that consign to this sale and which appear in the advertisement on another page are sufficient guarantee of the excellence of the offering. A big lot of choice cattle will be placed before the western buyers at this time. McNerny & Son offer choice bulls sired by Move On 43d of the famous March On Family, and out of dams strong in the blood of Corrector, Fowler and the Grove 3d. Guy Swabb, Murray, Iowa, offers Jasper Donald by the great Beau of Shadeland 31st, by the great show bull Beau Donald 28th and has for dam a daughter of Monarch of Shadeland 3d, one of the largest and best bulls of the breed. G. E. Stryker offers a few bulls by Princeps A. Jr., a Princeps 4th bred bull. One is out of Imp. English Lady and the others out of cows noted for their produce. W. H. Leslie enters a number of bulls and females. Among them some strong in the blood of the polled bull Sir Giant. A. W. Elliott enters an even dozen in the sale. One choice cow by Logan's famous bull, Young Beau Brummel. This consignment is especially strong in the blood of old Grove 3d. Mr. Bengen consigns a number of good ones, principally by his great bull Ajax, Beau Diplomat. Mr. Bailey has sold in the Rogers sales for some time and has always brought out a good bunch. He says these are still better. O. J. McCullough lists a few high-class bulls from his good young herd. Mr. McCullough has a good herd and could not well offer any but choice ones. Ben Broughton, Lake View, Iowa, and owner of one of the very best herds of that great Hereford state consigns a bull by his famous Beaumont Jr. That is all the recommendation needed. E.H. Gifford, Lewiston, Neb., and one of the best breeders of Polled Herefords in the country offers a choice bull. G. C. Boehling offers a few bulls that are of nice ages and good breeding. They will please those looking for good ones. H. J. Fluck, of International fame as a steer exhibitor, lists a few. Mr. Fluck made a name for the Peerless Wilton strain. J. C. Hatz, De Witt, Neb., is making an initial consignment. The writer is personally acquainted with Mr. Hatz and bespeaks for him due consideration for his good cattle. They are strongly Polled and of grand breeding. The Rogers consignment will speak for themselves. They are the get of the great Beau of Shadeland 31st and Monarch of Shadeland 3d. These are two of the largest and best bulls of the breed. Send for the catalog of this sale at once and when you write mention The Homestead.

Walter Roberts' Dispersion Sale.

For the last time we want to call attention to Aberdeen Angus breeders to the dispersion sale of the Walter Roberts' herd at Atlantic, Iowa, on April 8th, when sixty head will be sold. During the past several years no man west has bought better than did Mr. Roberts, and the tops of many of the leading sales will be included. The old herd bull, Deceiver, a noted show bull and a spendid breeding bull, together with a splendid lot of young bulls will be sold, and a strictly high-class lot of females. Inasmuch as this is a dispersion sale it will furnish an opportunity that seldom comes to those who want cattle and were it not for the death of the senior Mr. Roberts this herd would never have been dispersed. The entire herd is rich in the most popular strains of the breed, and the foundation of this herd was laid without regard to time nor expense. We therefore say to Angus men or those who want to secure some good bargains in Angus cattle to make it a point to be at this sale. When writing for catalog kindly mention The Iowa Homestead.

Trunmans' New Importation.

Manager J. G. Truman, of the Pioneer Stud Farm, Bushnell, Ill., writes: "I am pleased to report the safe arrival of our second 1913 importation on the 20th inst. They arrived without a scratch on them, free from any coughs or colds and looking remarkably well. In fact, they are already on sale. This importation in addition to our February importation and a few of our noted prize winners last fall, gives us a very complete assortment and makes our stables practicaHy full, every stall containing a high-class stallion. Our trade has been very good, a large per cent of our buyers being old customers, among which were J. T. Dunlap, Lenox, Iowa, to whom we have sold one of the best rising four-year-old Shire stallions that has been shipped to Iowa for a long time. We are making attractive prices to move this large collection of stallions to make room for our regular April importation that is due to arrive here about the 10th. We have at the present time on hand eight rising three-year-old Shire stallions bred on the noted Wrydelands Farm that should be very attactive to breeders requiring strictly high-class blood and together with all our horses are priced where they will soon be sold. We also have a few stallions that we have taken from our old customers that were sold to them three to five years back as two year olds that we are offering at very attractive prices in order to move them. Our 1913 catalog will be mailed to any of your readers that are interested in strictly high-class draft horses." See page 38.

Shallenberger's Short-horn Sale. Last Call.

For the last time we call attention to the sale of Short-horn cattle that will be made by A. C. Shallenberger, Alma, Neb., at the sale pavilion in Alma, on April 10th. In previous issues of this paper the writer has described at some length many of the cattle that will be sold in this sale. We wish to say at this time that we feel that the cattle business is in such shape as to justify conservative business men making investments in good breeding stock. Not in our memory has the future looked so bright, and we do not believe that all conditions have been so good for the future of the business at any time as they are right now. The high tide of prices is not yet on us, although there is considerable strength to the market, but with a reasonable season of crops, and stockmen will see an appreciation of values that will be very renumerative to the man that has some stock to sell. The cattle that Mr. Shallenberger will sell at this time are of such breeding and conformation that they are always good property, never were poor property, and probably never will be, at least never in our time, poor investments. There are positively some herd-heading prospects in this sale, bulls good enough to head the real good herds of high-class stuff, and there are also females that will look good in any herd and add a bit of value to them as well. A few right good cows in a herd help to raise the value of every other animal in the herd, so if the value of the young bulls one might have for sale in a season and the breeding cows retained were raised in value say $10 per head, an investment of a few good Scotch cows even at fairly good prices might mean that they really cost the new buyer practically nothing. Keep these facts in mind, get the idea that it will pay you to attend this sale, and then do that thing. It is the only way to succeed in this business, and time put off now in buying feeding stock is sure to be time put to a very poor purpose, for these cattle are going to cost more money. If you have not the catalog, a quick move will still get it to you in time, but at any rate go to the sale, and should you write mention The Homestead.

Cement Machinery.

Readers of The Homestead interested in concrete mixers, collapsible culvert molds and other machinery and material used in concrete work should read the advertisement on page 5, the address of which is Box 87, Dumont, Iowa. They also make buzz saws and power washing machines. This firm has been doing business in Iowa for a good many years and have established a good reputation. Many of their machines are sold close around home which would not be possible if their goods had not gained a reputation for quality.

Escher's Bull Offering.

Included in the Chas. Escher & Son Aberdeen Angus sale at Botna, Iowa, on April 13th, will be ten young bulls and among these will be several that will make outstanding herd bulls. It is one of the few remaining places where good Angus bulls can be secured and to those who are in need of a good herd header and have not as yet secured one, we will say by all means make it a point to attend this sale. They are selling four Trojan Erica bulls, each one a double-bred Trojan Erica, and each of these is good enough to head any of our very best herds. One of these is Elect, a son of that noted bull, Imp. Earl Eric, of Ballindalloch, and he is one of the very best Trojan Ericas that they will offer. He will be two years old in July or August and he is an outstanding good one. He has ample size with wonderful quality, a thick, low-down, well-balanced bull from one end to the other, and he is a bull that is destined to make an impressive sire and a splendid herd bull. Any of our best Angus breeders can afford to look after this bull, because he is good enough for the best of them. Another good one is an Erica topped Blackbird and is sired by Earl Eric, of Ballindalloch. The dam of this bull is Blackbird, of Cloverland IIth, and he is one of the very best of the younger bulls that will be found in the sale. A good K-Pride sired by old Kelberg and out of a K-Pride cow is another good one. This bull is a doubled bred K-Pride and he has every license to make a splendid herd bull. They are selling a good two year old by Botna Valley Prince and he is out of an imported Pride of Aberdeen cow, and he is also a good bull. There is a young Blackbird bull in the sale sired by Earl Eric, of Ballindalloch that is the making of a most excellent bull and a few others that will meet with favor of the buyers on the day of sale. Just a word here about the fifty females they are selling. You never saw a better bunch individually or in point of breeding. Ten imported cows, five of which have calves at side, and as good cows as ever graced any herd in this or any other country are listed for this occasion. Thirty-five cows with calves at foot, all of the calves being sired by their imported bulls or their young prize-winning bulls, Felzer or Bromo, will certainly look good to Angus breeders who desire to buy females with the coupons at their side. A remarkable thing about this sale is the fact that twenty-five of these females will weigh 1,500 pounds or better and every one a breeder and nearly every one of the twenty-five will have calves with them. Write for the Escher catalog and make it a point to attend this sale. When writing for it kindly mention The Homestead.

Crouch Endorses Wool Fat.

Our readers are familiar with the farm of J. H. Crouch & Sons, the noted horse importers and breeders of of the La Fayette Stock Farm, La Fayette, Ind. It can be depended upon when this farm endorses a proposition it is worthy of the good words given. In the case of the Corona Wool Fat they not only endorse it, but use it in large quantities. The manufacturers of this remedy claim for it that it is a positive specific for hard and contracted hoof, grease heel, thrush, sore shoulders, barb-wire cuts, sore teats on cows, etc. It is reduced and refined by The Corona Mfg. Co., Kenton, Ohio, a reliable and responsible firm. For particulars of their twenty-day trial offer see their advertisement in this issue.

TOO LATE TO CLASSIFY.

Belgian Emporium of America

150 Stallions, Mares and Colts 150

Including a Few Choice Young Percherons

60 HEAD imported October, 1912; another large importation arrived March, 1913, making this the best and largest collection of Belgian draft horses to be found anywhere in America. The supply on hand never allowed to run low; you will at all times find a large and choice collection from which to choose. You will be delighted at the Belgian Horse Show to which you will be treated when here. I can satisfy you in price; I can satisfy you in quality, bays, browns, blacks, sorrels and roans. Get on the train, come to Cedar Rapids or Iowa City, then phone me to meet you at the electric car line; car every hour from Cedar Rapids and from Iowa City. Catalog ready.

HENRY LEFEBURE, FAIRFAX IOWA.

FALL BOARS BY LONG KING'S SUPERIOR

AND Big Bone III. I have 4 fall Poland China boars by Big Bone III out of a Long King sow and a number by **Long King's Superior.** Send me a check for **$25.00** and I will send you a boar worth the money. If upon his arrival you are not satisfied send him back and get your money. Send me your order, mentioning The Homestead.

C. W. PHILLIPS, NEW SHARON, IOWA.

HERD-HEADING POLAND CHINA FALL BOARS

NICELY grown and of excellent blood lines. They are sired by Nebraska Wonder by A Wonder, and Chief Price Again. They are out of sows by O.'s Jumbo, Jumbo Jr. and others. Nothing better to be had at any price, yet we name farmers' prices on these good boars as we wish to sell them at once. Mention The Homstead and address at once Beall & Jackson, (12 miles south of Lincoln), Roca, Neb.

G. O. SATRE'S CHESTER WHITE BRED SOWS

GILT-edge breeding, sows thrifty and healthy, April and May farrow and priced for quick sales. The blood lines are productive ones and foundation stock was selected from leading herds. There are bargains. Address, mentioning The Homestead, G. O. SATRE, JEWELL, IOWA

SHORT-HORN BULLS

AT Pike Timber Stock Farm—2 Scotch Lancasters, 10 and 11 months old, both red and outstanding good ones; also 2 topped bulls 11 months old, red. DAVENPORT & MACK, Belmond, Ia.

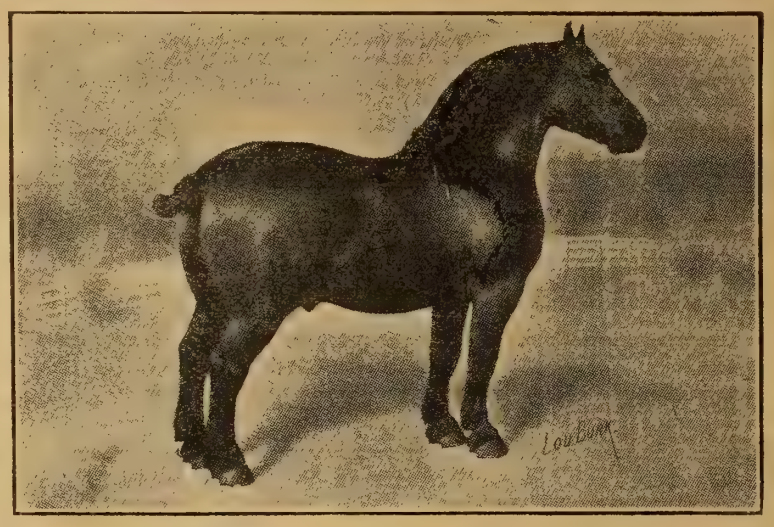
HEAVY-BONED Poland Chinas, both sexes, any age. Priced right. Also B. P. and W. Rocks. James H. Duncan, Lone Oak Farm, Lineville, Ia.

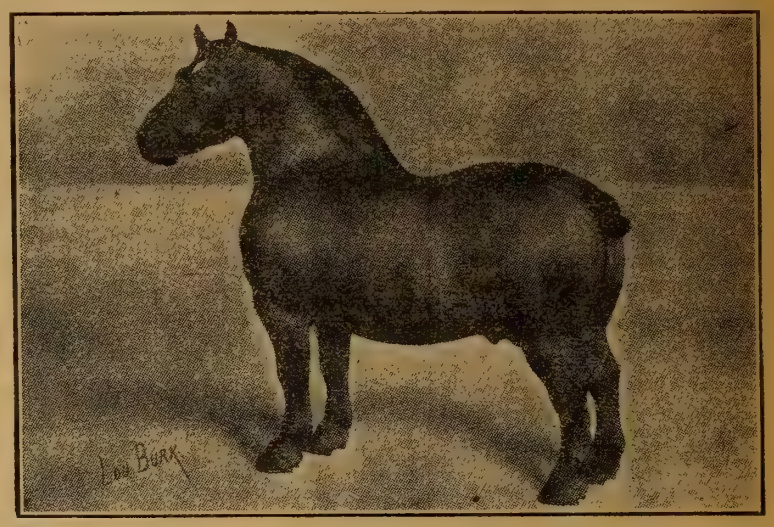
WEST'S GRAND DISPERSION SALE

of PERCHERONS AND BELGIANS will be held at WOOD RIVER, NEBRASKA, THURSDAY, APRIL 17, 1913

THERE will be forty head offered in this sale. Everything goes. Every one of our top stallions and mares that we have refused to price will be offered and they will absolutely be sold. There are fourteen stallions in the offering, which include some of the very best in this country as well as in Europe. Mares that have made our stud famous as producers, as well as for their great scale will be offered. Everything listed is of the very highest order, and in the finest condition possible. Nearly everything is imported, but the home bred ones are equally valuable. Do not miss this sale if in search of good ones.



One of the best Percheron stallions to be sold this season. Has been used extensively in this stud. Do not overlook this horse if in search of the very best.



Allbroction de Zulte (51974) one of the best Belgian stallions ever imported. Belgian horsemen and the government express regret that he was ever exported. He sells in this sale.

The quarter of a century that we have been in the business of breeding and importing pure bred horses has taught us much. It has placed at our disposal horses in the old country that newer men were unable to buy. It has given us the preference at many of the very best studs of the old country, and the years have proven the ones that bred the horses that made good. This is the sort that we offer you at this time. We are selling everything in this sale. Avail yourself of this opportunity to get the very best and at your own price. We want to send you a catalog. Write us mentioning The Homestead and you will receive one by return mail. Remember that Wood River is 16 miles West of Grand Island, Nebr., and that local trains leave Grand Island at 7:00 A. M. and 2:30 P. M. Plan to be with us sale day. Address

COL. Z. S. BRANSON & CLYDE HAYHURST, Auctioneers

ANNUAL SALE SCOTCH PEDIGREE SHORT-HORNS

from the herd of GEO. ALLEN & SONS will be held in sale pavilion at SOUTH OMAHA, NEBRASKA, TUESDAY, APRIL 22, 1913

PROBABLY the grandest collection of Scotch cows ever offered in a Western sale, or in fact in the entire country will be placed at your disposal at this time. Pedigrees of the very highest order, individuals to please those with the very highest ideals, and all of desirable ages and in splendid thrift.

A Group of Cows in Sale.

THE consignment of bulls is far the best that has ever left our herd. We offer the sort that we would be pleased to buy were we in the market for herd headers. But few bulls for sale have been bred from as great sires and dams as these we offer. They are well grown, of excellent conformation, and of the best breeding possible to obtain. Many are outstanding show propositions.

We want to tell you of this offering. We want you to have our catalog. It is ready for distribution and a postal card mentioning The Homestead will bring it to you. Kindly write us at once. Address

Col: H. S. Duncan and Col. T. C. Callahan, Aucts.

GEO. ALLEN & SONS, Lexington, Nebraska

Percheron Stallions

ONE coming three, two coming two-year-old stallions, sired by 2,200-lb. stallion, out of daughters of Georgiana, one of the greatest mares of the breed; won the blue at the Iowa State Fair; produced 18 living colts without a break, three of them state fair winners. They are a wonderful family of show horses, and sure breeders. These young stallions will all make better than ton horses. We are pricing them to sell. Address

WOODLAWN FARM, Sterling, Illinois.

HORSES AND JACKS.

Frank Iams' Draft Stallions and Mares

are "up to the minute." They are the "drafty, big-boned type"—"nifty, big black boys"—the real "medal winners"—sensational "show and business horses" of note, "ripe peaches." Big, classy "peaches and cream" "black boys." The "Iams brand" of "top notchers." Iams' importation of Percheron and Belgian stallions and mares are in the "pink of condition" and ready for a "good selling." "Ikey boy," smile sweetly, and hundreds of Iams' satisfied customers "will sit up and take notice" that Iams, the "king pin" horse importer, is still "doing business" at the "old stand." Iams is "pushing" his horses to the front. The big "peaches and cream" "boys and girls" are attractions that can't be overlooked. Iams mesmerizes buyers with "real drafters" at "bargain prices" and having the "horses as advertised." Iams' "competitors" and "hammer knockers" are "boosting Iams" by their "knocks," until now he is known as the "millionaire horseman," and on "Easy Street," and growing fast. Ikey, "buzz around" and sing Iams' song. He is selling these "aristocratic," fancy "black boys" cheaper than ever—or better horses for less money—$1,000 and $1,400 (few little higher). Iams has

"Ikey Buyer," Bea "Wise Guy" —Buy "Show Horses" of Iams—who has crossed the Ocean 50 times for horses and sold 5,444 Registered Horses, "Iams' 31 years of success" make him a safe man to buy from at Special Low Democratic Prices. "Everybody's Doin' It.

60 PERCHERON AND BELGIAN STALLIONS AND MARES 60

They are "model drafters." They are 2 to 5 years old, weigh 1,700 to 2,500 pounds, 80 per cent blacks, 50 per cent ton horses. All "registered," approved and inspected by governments of France and U. S. and certificates "stamped O. K." Iams gives a "certificate of soundness and health" with each horse—signed by a "Nebraska State Deputy U. S." Many Paris "prize winners" and "gold medal horses." Big, drafty "top-notchers," with big bone, quality, style, finish and action to burn. They are "eye openers"—larger and better horses than seen elsewhere. Big "business propositions" that make "the wheels work fast" under a "buyer's hat." "Georgie, dear," Iams made a "big killing" by buying his horses in Europe. "War scare," "bad crops," "close money" and "Iams' cash" caused the "prize winners" and "tops" to be thrown on the market for a "good selling."—Iams "cut the melon" and bought the "rippers" at "knockout prices." Iams will give his customers the benefit of his "good buy." "Ikey boy," come on down town"—see Iams—"Everybody is Doing It."

Get into Iams' "get rich wagon" and save $1,000 on a "top stallion"

(and you wear the diamonds). Iams is a "big fly in the jelly" in the horse world. "He keeps the gang guessing." Iams sells "imported horses only"—(they win 90 per cent of prizes at big horse shows). No "American-bred full bloods"—no "auction stuff" or "peddlers' horses"—only "choice drafters" of big size, bone, quality and finish. Iams has the "crack stallions and mares" you "read about." Buy horses of Iams and you won't "get stung" in horse or price. "Dolly D.," waltz me around once again, "Ikey," land me at Iams' box office and importing barns. Full to "the roof" with "black boys" (and all must be sold). Reduced prices. All the world knows Iams and his "peaches and cream" horses. 1913 promises to be a bumper year to Iams and his customers. He saved $300,000 to stallion buyers in 1912. Watch "Iams' smoke." Iams' 31 years of successful business make him a safe man to do business with. Iams sells horses "on honor." A boy or a lady can buy as cheap as a man. Iams' 1913 horse

Catalog is an "eye opener." It has a "laugh" and a $1,000

bargain in every line. A "bunch of gold" to stallion and mare buyers. It is full of the real "peaches and cream" stallions. It is the finest, most elaborate and original up-to-date horse book in the world. Iams, the "square deal" horseman, makes every statement in ad or catalog good—or you get the $500 he hangs up. Iams guarantees to sell you a better

Imported Stallion at $1,000 and $1,400

(few higher) than are sold to stock companies for $4,000. Imported mares, $700 and $1,000. Iams gives 60 per cent breeding guarantee; pays freight on horse and fare of one buyer. He can furnish $1,500 insurance. Iams buys and sells every stallion himself. Saves buyers $1,000 in middlemen's profits. He buys stallions by "train load." He speaks languages—(saving 20 per cent). He is not in the "stallion trust." No partners to share profits. He "pays cash" for his horses—and sells "topnotchers" by "hot advertising" and having "the goods." "Big Ikey," leave your "happy" home and buy a "top" stallion or pair of imported mares (of Iams) that bring colts that sell at $500 each. "Papa," don't let those "auction men" "hand you a lemon" in one of those "so-called" "American full bloods" of questionable breeding. Buy an imported horse of Iams, the "reliable horseman." (Then we will "all wear diamonds.") Iams' "selling clothes" fit all buyers. Write for Iams' million-dollar horse catalog. Iams won't let you go without a peaches and cream stallion or mare. "He sells the horses." Iams' guarantees are backed by "half million dollars." References—1st Nat'l and Omaha Nat'l Banks, Omaha; Packers Nat'l Bank, So. Omaha; Citizens State, 1st State and St. Paul State Banks, St. Paul, Neb. Iams buys big ad space because it is cheaper than flannel-mouthed horse salesmen.

ST. PAUL, NEBRASKA

OUR FIFTH ANNUAL

30-Day Sale Starts March 1st

THE offering consists of a choice selection of imported and American-bred Percheron and Shire stallions and mares. We were never better equipped to furnish the most discriminating buyers with first-class stallions than we are at present. Our horses were imported last October. Are perfectly acclimated, are two and three years old, all dark colors, weighing from 1,800 to 2,200 pounds. The mares are of the large brood type of serviceable age and are in foal. We give our customers fresh, clean, sound horses each year. They are not stale from overfitting. They are the right type with plenty of size and bone. We sell our horses at prices any farmer can pay. We have a large assortment to select from. Every animal guaranteed sound and a satisfactory breeder. If you want the best at prices that defy competition do not fail to visit us before buying elsewhere. We have a few good aged horses that have been replaced with two year olds, sound and good breeders, that will be sold very cheap. Terms to suit any one. Come and see us or write today for full particulars. Homewood is conveniently located 23 miles south of Chicago on Big Four and I. C. R. R., with trains to and from the city every hour. Barns near station. Bell phone, Homewood 58 W. Address

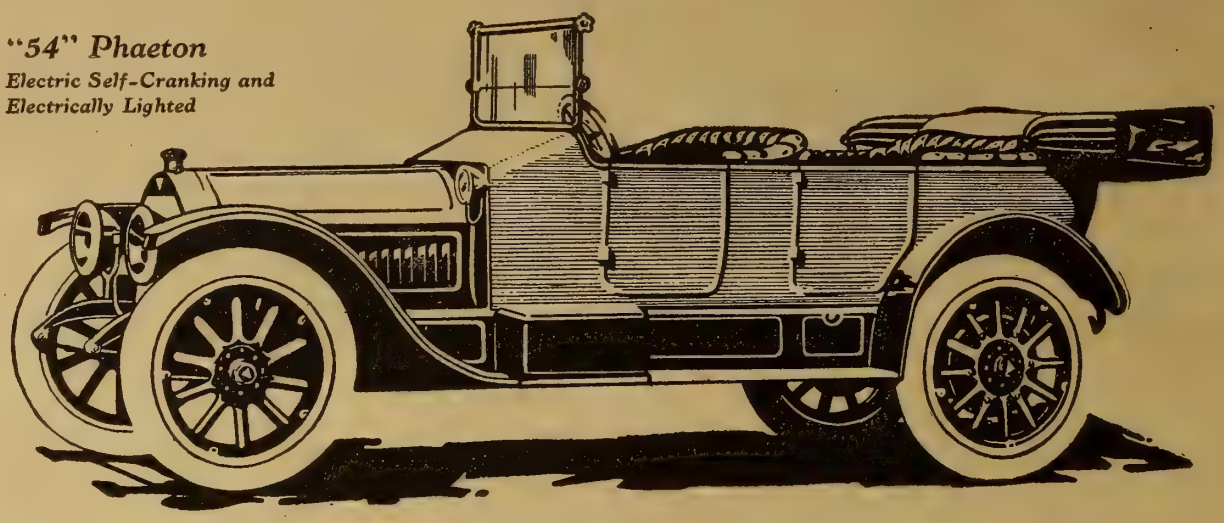
A GENTLE ADMONITION

The World's Largest Builders of Six-Cylinder Automobiles

"54" Phaeton
Electric Self-Cranking and Electrically Lighted



A Definition of Automobile Service

This is a much talked about subject.

Every dealer, every manufacturer, talks about it. Some are specific, some only suggest what it might be. This is our definition:

See if you do not agree that it is the most important in the consideration of your motor car purchase.

No man, no matter how experienced, can know what service any car will render. No two drivers operate their car alike. No two cars are called upon to render the same kind of service.

Machinery will wear out. It must be attended to, and some one expert, willing and broad in mind, must be there to see that the car gives the service you expect it to give.

A car must be built with a sufficient allowance to take care of the average demand made upon it.

No dealer can give service who is not successful. Motor car satisfaction is largely a matter of dealer satisfaction. To be able to give such service the dealer must make a profit. He cannot sell his cars at a discount. He cannot make unreasonable allowances for old automobiles in order to make a sale and have a profit left sufficient to give the service that should go with every motor car.

He must see the broader possibilities of conducting his business upon a service basis than is often found, especially among dealers whose only interest is in making the sale.

Buy a Six if Paying More Than $2,000

The "54" HUDSON is all that any automobile at any price can be in performance, luxury, comfort and value. Backed by our own service you will find in it as near an approach to ideal motor satisfaction as is known.

The "54" HUDSON is the answer to a question that has long concerned all automobile builders. "What will Howard E. Coffin do when he builds a Six?"

When he built this car he had as his associates experts from 97 leading American and European factories—48 all told.

Thus all guess work was eliminated—all experiment made unnecessary. With so many viewpoints and so much experience, errors that others had made were eliminated—advancements that others found impossible were easily accomplished.

The "54" HUDSON has electric lights. It is electrically self-cranked. The famous Delco system, patented, is used. Every luxury is included, speedometer, clock, top, curtains, rain-vision windshield, demountable rims, twelve-inch upholstery, etc. Equipped with a five-passenger Phaeton body at $2450.

At $1875 you can obtain the HUDSON "37"—designed by the same engineers that built the "54"—and pointed to as the "Four-cylinder masterpiece."

Send for catalog, or go to the Hudson dealer, and he will prove their value in a hundred different ways.

The Iowa Homestead

DES MOINES, IOWA, THURSDAY, APRIL 17, 1913.

WHAT ONE ACRE WILL DO

How J. H. Cash, an Arkansas Farmer, Made One Acre, by Diversified Farming, Produce More Than Twenty Acres Devoted Exclusively to One Crop.

GIVEN the factors of brain mixed with brawn, scientific cultivation and proper climatic conditions, what can be accomplished with the ordinary acre? Most of the prize-winning acres, the yields of which are given widespread publicity and held up as inspirations for all emulators, have been specially picked for the purpose, all too often consisting not of one regular acre, but of a long stretch of ground, often along a hillside or where the fertility has been most conserved by either natural or artificial means, sometimes even in isolated spots or patches the total area of which constitutes an acre. That such a prize-winning acre should not be compared with the ordinary acre belonging to the ordinary farm is generally conceded, so that the attainments of such specially selected and specially prepared tracts have little or nothing to do with the general proposition of the possibilities of the ordinary acre.

Mr. J. H. Cash, a prosperous and progressive farmer living near Camden, Arkansas, has shown the possibilities of an acre of ordinary southern land in a most striking manner, during the past year, reaping larger returns from his single acre than did a neighbor farmer on twenty acres lying just across the road. By pursuing a policy of diversified farming, Mr. Cash made his acre produce $127 more in a single year than did his neighbor confining his twenty acres to the single crop of cotton. Mr. Cash tells the story of his accomplishment in the following manner:

"I had taken good care of this land, had rotated my crops and put a lot of stable manure on the ground. It had been under a cover crop through the winter, furnishing fine pasturage for the calves, and to my mind it was good enough to raise any kind of crop that I wanted to plant.

"It was a pretty good job to undertake to produce as much crop wealth on one acre as another man, just as able and just as well equipped would on twenty acres, and that twenty acres not a hundred steps away. But I resolved to do my best. So I started in early, prepared my soil just as well as I knew how, and put the acre in onions. While my neighbor was still cultivating his cotton, I gathered from this acre, 259 bushels of onions and planted the same land to corn and peanuts. Forty bushels of corn isn't a big yield, but with the forty bushels of corn I gathered fifty bushels of peanuts, four tons of peanut hay and 400 bundles of corn fodder, or, as they call it in the North, stover. After the peanuts were gathered we planted a part of the land to turnips and a part to wheat and the wheat made winter pasture for my two colts and a cow. After everything was sold I counted up the proceeds from this plot, and, not counting the pasturage, the total revenue from this single acre, cultivated under an ordinary plan of diversification, was $537.

"What did my neighbor do on his twenty acres of cotton? That was what I was anxious to find out. The season was good, he had worked his crop industriously, and it looked as well as any field of cotton I have ever seen in Ouachita county, and I suppose Ouachita can raise as good cotton as any other county in Arkansas. My neighbor was favored, too, by a continuation of the good prices which have been paid for cotton during the past several years. After the cotton was all picked, ginned and sold, I went to my neighbor to compare notes.

"'What is the best you can show for your twenty acres of cotton?' I asked him. He was not boastful, but there seemed to be a feeling of satisfaction in his manner when he told me that he sold his cotton for $410. That is a whole lot of money to a farmer, when it is laid out in ready cash, and that is why so many of our southern farmers continue to plant cotton when they could much easier raise some other crop, and that with greater profit.

"'Well, my acre brought me just $127

[Continued on page 36.]

THE ONE-ACRE PATCH WHICH PRODUCED $537 IN A YEAR—ONIONS, CORN AND PEANUTS GROWING TOGETHER TO PRODUCE $127 MORE REVENUE THAN TWENTY ADJOINING ACRES PLANTED TO ONLY ONE CROP.

LOOKING AFTER THE FARMER.

When I was a boy back in Ohio and a young man in Missouri the farmer was considered legitimate prey for any person who wanted to take advantage of him. He was singled out as the victim for all sorts of confidence games. The amount of brains utilized in some of the swindling schemes was remarkable. Devoted to a worthy cause they would have made their owners famous; as it was they simply made them infamous.

Times have changed since those days. The farmer is a reader of the daily newspapers, the farm papers, the magazines. He keeps abreast of the times. A man can no longer take advantage of his ignorance. He knows the ways and the wiles of the world. He reads of attempted swindles in other parts of the country and smiles a superior sort of smile, for he knows much better now than he did in the old days. He is no longer in the market for gold bricks. The cartoonists on the city papers and the humorous journals no longer picture him coming to town with his trousers stuffed inside his boot-tops, with whiskers extending to his waist or tucked into his belt. Such pictures were libels enough when they were extant, two or three decades ago; today the farmer is as well groomed, as well dressed, as well read and as well educated as the city man. I have spent whole days rambling over the grounds at some of our big grain-belt state fairs and have been unable to tell the farmer from the city man, excepting that the farmer usually rides in an automobile and the city man usually rides in a street car. With increasing prosperity has come increasing ability to take care of himself against all comers, swindlers and confidence men included.

Along with the increasing ability of the farmer to look after his own interests there has come an awakened spirit of paternalism on the part of our government. States have wakened up to the fact that they must protect their people from the unscrupulous. Not long ago Kansas passed a law guarding its citizens from the man who seeks to sell unsound stocks, calling it a "blue sky" law, because about all the sellers had was hot air and blue sky. Iowa and other grain-belt states are proposing to adopt similar laws. Then Uncle Sam stepped into the breach and fulfilled a long-delayed duty by passing a rigorous pure-food law, so that it is no longer possible to take timothy seed, coal tar dyes and similar ingredients, put the resulting concoction in a handsomely labeled bottle and sell it for strawberry preserves. Finding that this law worked well Uncle Sam went a step farther and provided for pure drugs, making it compulsory to state whether a preparation contains alcohol or morphine or any other deadly drug. Now he is proposing to put a stop to patent medicine manufacturers making claims for their drugs which cannot be substantiated. And so all along the line the government has been taking care of the people who cannot take care of themselves.

The more I think over the changes of the past forty years the more wonderful it all seems. Here, for instance, is the great state of Kansas passing a law against "adulterated shoes." Whoever thought of such a thing ten years ago? But a law adopted at Topeka this winter makes it unlawful, under severe penalty, to manufacture or sell any boot or shoe that uses any substitute for leather whatever. The substitutes have been masquerading for a good many years under a lot of high-sounding names: leatheroid, leatherboard, fiberboard and so on, but no matter how fine the name the imitation wore out just as quick and many a hard-earned dollar has been wasted on "adulterated shoes." And right on top of reading about this Kansas law I find a little item in one of the daily papers stating that Senator Cummins, of Iowa, proposes to introduce an amendment to the tariff law providing for the labeling of woolen goods and textiles so that there can be no deception as to what they are made of. If his plan goes through it will no longer be possible for the merchant to sell the farmer a suit of "all wool" that will fall to pieces the first time it is rained on or wear out in a week or two, with no more wool in it than there is in a cultivator. Things are getting better when the government, both of state and nation, look after the people so carefully.

Sometimes I get just a little bit discouraged when I notice the trend of the times. There is an awful lot of trouble and sorrow and wickedness in the world. But every time, before I can get too discouraged, my attention is directed into brighter channels by some such thought as this that I have tried to express here. It is a pretty good old world, after all. The people are better able to take care of themselves, the farmer probably best of all. Those who have not yet learned how are looked after as never before by a government which doesn't consider its whole duty done when it collects the farmer's taxes or sends a commission banqueting around from one city to another on the theory that it is doing something to make country life a little more worth while.

A GOOD RECORD IN ALFALFA GROWING.

The campaign recently undertaken by the International Harvester Company to enlarge the area of alfalfa grown in the corn belt is a commendable one. If it should result in even starting one alfalfa grower in each township this in itself will in the end contribute very greatly to the wealth of those regions affected.

The Harvester Company in compiling the experience of those who have been successful in growing alfalfa calls attention to the case of Charles E. Yanney, of McLean county, Illinois. He got a good stand on six acres by breaking the ground the last of July, disking it three times, harrowing and cross harrowing two or three times, dragging twice, sowing twenty pounds per acre of seed broadcast, harrowing it in and rolling the ground. This was in 1906. The alfalfa grew about four inches high that fall and was not cut. In 1907, it yielded about two tons per acre and in 1908 150 pigs were pastured on it

Three cuttings of hay returned 2½ tons per acre, but in addition 150 pigs were pastured on this alfalfa from the time of the first cutting until December. The pigs were bought when they weighed forty-five, fifty and sixty pounds, and when they were weighed in the middle of December they averaged 125 pounds. Counting a gain of seventy-five pounds per head and allowing $100 for about 200 bushels of corn fed to the hogs, and figuring the pork at five cents per pound, these hogs returned $462 the hay was worth $195, total $657 from six acres or $109 per acre. Contrary to the results in many other cases this pasturing did not hurt the alfalfa and was repeated without harm next year.

In 1909, this piece of alfalfa yielded three and a half tons per acre in three cuttings and pastured eighty-three hogs from the time the alfalfa was four inches high in the spring until August 14th, when sixty-six head were sold, and from then till frost it pastured the remaining seventeen hogs and twenty-five pigs bought at that time. It is estimated that the eighty-three hogs which weighed seventy-five or eighty pounds in the spring made a gain of seventy-five pounds per head. The ones sold in August averaged 182 pounds and those kept till later 225. Counting only eighty hogs and nothing for pigs, they returned, after paying for the 250 bushels of corn fed, $420 to the credit of the alfalfa alone; the hay was worth $273 total $693 or $115.50 per acre.

This alfalfa was not injured by this extra hard treatment, but some parts of it were frozen out last winter, and this spring the field was disked and cross disked and the thin spots reseeded, securing a fair stand.

HEALTH OF THE CHILDREN.

Medical inspection in rural schools, similar to that which is so conclusively proving its efficiency and worth in city schools, is being urged by prominent educators throughout the grain belt.

A well-known Minnesota physician, who has been making a personal canvass of the rural schools of that state, finds some astonishing and alarming health conditions in the rural schools. Forty per cent of the children, he asserts, suffer from "almost constant" toothache, while 19 to 23 per cent have frequent headaches. From 12 to 14 per cent of the country school children suffer from earache, while 4 per cent have discharging ears. "Adenoids, earache, discharging ears, deafness, this is the order we find over and over again," reports this investigator, adding, "4 or 5 per cent of the children simply do not hear what is going on and are therefore put down as stupid when they are not."

This Minnesota investigator found great carelessness prevailing in country homes on some of the most simple things of household sanitation and personal cleanliness. For instance, he discovered that while nearly all of the children have tooth brushes but few use them regularly. He also reports that country people, as a rule, are careless in regard to the proper ventilation, frequently excluding all fresh air from their houses by keeping the windows closed tightly. In one school, visited by him, he found an old-fashioned unjacketed stove sending the thermometer up to ninety degrees. In this stifling atmosphere several dozen children were confined without any ventilation.

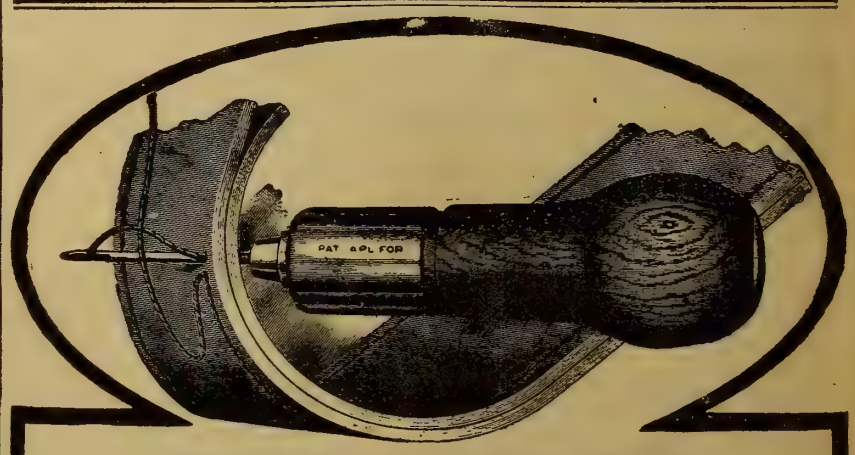
The investigation, if the results are heeded, can hardly fail to do good. That there is need of some such awakening is not to be denied. At the same time the prospect for the future is encouraging, for, thanks to a campaign of publicity and to the devotion of a few enthusiasts, people not only of the country, but of the cities, as well, are coming to realize that time and money are well spent in checking and preventing diseases before they become too far advanced. Town schools are visited regularly by nurses, while on the outbreak of an epidemic it is customary for physicians to visit the schools and administer antitoxin and other preventives, free of charge. Some such crusade must be carried on in the rural schools if the all-important health of the child is to be conserved and protected as it should be.

GASOLINE TRACTORS FOR ROAD WORK.

Some time ago the road commissioners in Pawnee county, Kansas, have recently put into service a twenty-horsepower gasoline tractor to take the place of horses in handling the grader, and the few weeks that the tractor has been in service has convinced the commissioners of its superiority over the old system. It is expected that eventually enough tractors will be purchased by the commission to care for the 186 miles of roads in Pawnee county.

Another instance is called to mind where 100 good road boosters living in Harrison county, Iowa, decided that gasoline tractors constituted the best form of power with which to grade roads. It does away entirely with the "see saw" principle which is so often carried out when horses are used on heavy graders. In addition it cuts down the cost of operating a grading outfit and it is just as serviceable when the weather is blistering hot as when it is cool.

Men may disagree about the type of road that is best adapted to a given community whether it should be sim-



MEND YOUR HARNESS WITH

The SPEEDY STITCHER

I WANT every reader of my paper to have one of my Speedy Stitchers **Absolutely Free.**

The Speedy Stitcher is the latest invention and the most effective of anything in the form of an Automatic Sewing Awl ever offered. Its simplicity makes it a thoroughly practical tool for any and all kinds of repair work, even in the hands of the most unskilled. With this Awl you can mend harness, shoes, tents, awnings, pulley belts, carpets, saddles, suit cases, or any heavy material.

The Speedy Stitcher is provided with a set of diamond pointed grooved needles including a special needle for tapping shoes. It also contains a large bobbin from which the thread feeds, all of which are enclosed inside the handle out of the way. This Awl has a tension which enables you to tighten your stitch. These valuable features you will not find in any $1.00 Awl.

It's FREE to Those Who Are Prompt.

I will give one of these excellent Speedy Stitchers absolutely free to any one who will send me $1.00 for one year's subscription to The Homestead during the month of April. This offer will positively be withdrawn on May 1, 1913. Kindly use the coupon below and be sure to send your order in today before you forget it.

JAMES M. PIERCE - DES MOINES, IOWA.

USE THIS COUPON

Date 1913

James M. Pierce, Pub. Homestead, Des Moines, Iowa.
Dear Sir:—Enclosed find $1 for one year's subscription to The Homestead. For my promptness send me postpaid, free of charge your Speedy Stitcher.

My name is.....

ply earth or concrete, macadam or brick, but there can be no disagreement over the need that exists of having all roads properly graded and therefore rightly drained. To this end the gasoline tractor will possibly be the most effective educational agency that can be employed to convince men that it is not enough to have "good" roads, but that we must continue in welldoing until we have the "best" that exists.

VALUE OF THE MOTORCYCLE

An incident showing the practical value of the motorcycle to the farmer is told by a subscriber, as follows:

A large farmer in the middle West had just commenced his threshing when a part of the thresher broke, crippling the machine. He was over twenty miles from the nearest point where supplies could be obtained, and the road was none too good. To send a man with a horse for a duplicate of the broken part would have required a full day, and any farmer knows the value of time under these circumstances. The son of the farmer owned a motorcycle, and immediately started for town to secure a part to repair the damage; and inside of two hours he had returned, the repair had been made, and the thresher was at work again. This one service justified the purchase of the machine and it is this kind of work that the motorcycle can perform probably better than any other means of conveyance, not only for the farmer and the resident of the suburban districts, but for the dweller in the town as well.

There are few road conditions that will prevent a motorcycle being used, and on the average road it can make fully as good time as the most expensive automobile. In price its first cost is so small as to be of trifling consideration in comparison with the work it can do, and the expense of maintaining it is hardly worth consideration. Even where an automobile is owned a motorcycle is also often kept because of its superior convenience and handiness in running errands, not to speak of its rapidity and economy of operation.

Among the factors which are bringing town and country closer together, and making it possible for the farmer to market his crops to the best advantage, the motorcycle takes rank with the automobile and the interurban. One of the largest motorcycle manufactories in the country reports that the bulk of its output this year is going to farming sections, farmers having discovered that the motorcycle furnishes quick and pleasant transportation, while at the same time being of sufficient practical value to warrant the outlay. A few years ago the motorcycle was looked upon largely as the amusement merely of the city man, but today it has a well-recognized place among the inventions which are daily proving their worth on hundreds of corn-belt farms.

THE INFLUENCE OF THRESHERMEN.

We seldom stop to consider the enormous sum of money that is invested in the threshing machinery of a single state nor do we reckon that the influence that can be exerted in behalf of improved agriculture by those who own and operate these outfits. There are 7,500 threshing outfits in the state of Iowa alone, each one of these requiring the services of two skilled and one unskilled but competent man. As a number of these rigs are owned jointly by several parties it is a fair computation to say that there are 25,000 men in Iowa who devote part of the year to this kind of work. No similar body of men could possibly be more interested in grain and seed crops than those whose welfare depends upon sensible rotation in order that the yields may be kept up and the fertility conserved.

The thresherman's influence is always directed in favor of good roads—not only good roads because of his own need, but because of the need of the whole community. He is a walking advocate of better bridges and being organized the threshermen have in the past and will in the future be forceful aids in improving roads and bridges.

There is another important duty which threshermen may perform by lending their aid to the practice of stacking grain. Grain that is sweated out in the stack is thereby improved in quality as compared with shock curing and as variation in value is due to quality the right and proper influence of threshermen can greatly increase the wealth that comes from cereals.

The thresherman's calling is one that has been dignified by the character of those who have engaged in it and to the individuals and to the state organization composed of these individuals The Homestead tenders its aid in the advancement of any cause advanced in the interest of better agriculture.

SILAGE IN STEER FEEDING.

Important information on the subject of feeding silage to steers is given in a bulletin issued by the Pennsylvania State College Experiment Station. The experiment was carried on with two lots of twelve steers each. The animals were similar in age and character, but were not of really good quality. They weighed at the beginning of the test an average of 882 pounds, and the average cost per head was $44.75. The experiment covered a period of 126 days, beginning December 1st and closing April 4th.

The feeds employed were ear corn, cottonseed meal and corn silage, the only difference being in the proportion given.

Lot 1, during the entire period consumed 20,892 pounds of ear corn, 3,167 pounds of cottonseed meal, and 34,087 pounds of corn silage, the whole costing $319.25. This lot, at time of sale on the close of the experiment, averaged 1,060 pounds, having made a gain of 178 pounds. They sold at Pittsburg at $7.20 per 100 pounds, giving a net profit of $1.51 per head. It is estimated that the price realized per bushel for corn, after paying for other feeds, was 76 cents, and that the price received per ton for silage, after paying for other feeds, was $4.65.

Lot 2, during the same period of time and under the same conditions, consumed 11,377 pounds of ear corn, 3,167 pounds cottonseed meal, and 50,397 pounds corn silage. The cost of this feed is given at $252.64. At sale time Lot 2 brought $7 per hundred pounds. They weighed 1,052 pounds, having gained 170 pounds, and netted a profit of $4.61 per head. On these the statement is made that the price received per bushel for corn fed was $1.04, and the price received per ton for the silage used was $5.73.

The summary of the experiment shows that the feeding of corn silage as the only roughage resulted in satisfactory gains in each lot and that while there was a profit in feeding ear corn throughout the entire feeding period, a greater profit was secured when light plain feeders averaging 880 pounds at the beginning of the feeding period were carried for two months on a ration consisting entirely of corn silage, followed with a grain ration toward the end of the feeding period.

In estimating profits, full market value has been allowed for all feeds so as to cover the labor of feeding. No credit is given for manure or for pork produced from the droppings of the cattle. It is generally estimated that hogs following steers will gain two pounds for each bushel of ear corn fed to cattle. If this additional increase were allowed, the profit in Lot 1 would be increased $3.89, and in Lot 2 would be increased $.23 over and above the figures above given per head. A record of bedding used and manure produced in Lot 1 was kept, which shows that 25,675 pounds of sawdust and 2,762 pounds of straw were used for bedding.

The manure weighed out amounted to 101,560 pounds. Allowing $1 per ton for sawdust (the cost delivered at barn), $8 per ton for straw and $1.50 per ton for manure, there was an additional profit of $2.60 each to that made from direct feeding of steers and production of pork from droppings in Lot 1 during the 126 days of feeding. This shows that in cattle feeding, the profits secured from the by-products of feed lots may amount to more than the direct financial gain on the cattle. The test shows conclusively that silage can be used as roughage even in the coldest of winters when fed in an open shed; that there was a considerable saving of corn by exclusive use of silage during the first part of the feeding period and that the value of feeds utilized in the production of beef during the winter was much greater than their market value.

Rural schools are held responsible for national illiteracy by the federal bureau of education.

CONDEMN LONG HOURS ON THE FARM.

To obtain sufficient help to operate farms so that production is kept up to the highest point is the most difficult problem which confronts the corn-belt farmer today. The situation is so serious in some localities that farmers have become soured and many of them are free to denounce as worthless the character of the available farm help. With them "former days are better than these" and no remedy is being sought so that each year the problem is growing more serious.

Every thinking man knows that the scarcity of farm help is due to a variety of causes, to one of which attention is called by a subscriber from Page county, Iowa, who says:

The reason why help is so scarce on farms today is not because wages are too low or that the work is too hard, but because the work days are too long. There are farmers who have system in their work and who are satisfied with a day's work of reasonable length. These, however, I believe, are in the great minority. The majority are keen on starting early in the morning, but with them a man does a day's work and then has to add to that two or three hours of choring. The man who quits work at six o'clock and plans to have even the choring done very soon after that has no trouble in getting help, but the system that requires working by lantern light in the spring and summer months is more than anything else driving men away from the farms. City work is more attractive simply because men know when their day's work is done and instead of criticising the character of farm labor it is amazing to me that farmers do not realize where the real difficulty lies and adjust themselves to the changed conditions. I consider that the wages being offered by farmers are good because $30 a month in the country is a much better proposition than $50 a month in the towns and cities. Wages have nothing to do with the scarcity of farm help, it being in my opinion wholly a matter of hours.

We believe that the problem is gradually solving itself because more and more men are coming to believe in the plan outlined by this subscriber. It is true that the character of farm work is such that it does not lend itself so well to uniform hours as labor in the city, but conditions have to be met fairly and squarely and in the bid for labor, conditions must be about equal on both sides if any balance is maintained in the supply as between the country and city. By the use of improved implements that are being used by farmers today there is not the same need for the long day that existed in the past and those who are meeting with the greatest degree of success in obtaining efficient help are more and more adopting the plan of even having their choring out of the way early in the evening.

WORKING THE BROOD MARE.

The average corn-belt farmer finds it necessary to work the brood mare before foaling as well as after. While it is true that a certain number of accidents are due to injury which the mare receives while at work, yet accidents will happen even in the pasture. As the result of a great deal of experience in the handling of brood mares on the harrow, on plows, on wagons and on drills, we have never had but one case of injury. On the other hand we have found that the colt from a worked mare is in nearly every instance stronger and more vigorous than the offspring of the pampered mare. It is only necessary to take special pains in turning on the headlands, particularly when the mare is hitched to tongued implements. Under no circumstances should the mare heavy in foal be put through soft ground when hitched because no condition is more apt to injure her than that of having her pull a heavy load when she is down half way to the knees in soft soil.

The brood mare that is worked right up to the time of foaling should be fed well. This means that something more than corn must be used. A mixture composed of two parts oats, two parts corn and one part bran will usually give excellent results. So much the better if some good clover hay can be used. With a ration of this character the mare will take much better care of her young colt than if she is fed corn and timothy hay.

As foaling time approaches the mare should have a box stall to herself and it should be cleaned out and freshly bedded every day. There is so much danger from joint ill, which always comes from contaminated stalls that no man is justified in taking the risk of having the colt arrive in filthy quarters. Where the bedding supply is exhausted one can well afford to go to the small expense of purchasing some to be used for this special purpose.

While it is true that a plumper and possibly a larger colt will result if the mare is not worked after foaling for a period of five or six months, yet that is an extravagance that the average man cannot indulge in. If she has a period of two or three weeks to rest so that the colt gets a good start there is no reason why the brood mare cannot be put in harness and made to do a reasonable day's work right along. For a few days, of course, the hours should not be long and it pays to unhitch possibly about the middle of the forenoon and the middle of the afternoon for a few days at least and allow the little fellow to have nourishment. After a week or two of this kind of treatment the colt will begin to acquire the habit of eating grain and he will do fairly well if he has milk at noon. Special pains should always be taken to see that the mare is not overheated just before bringing her to her colt. If the driver uses a little sense he can always see to it that she is allowed to cool off even on very warm days before unhitching. With the proper kind of care there is no reason why a colt cannot be brought through the spring, summer and fall months in fairly good condition of flesh even though his dam is at work most of the time. It cannot be done, however, without letting him have just about all the grain that he will consume.

THE EXPENSE OF KEEPING GOOD MALES.

The breeder who handles live stock on a small scale often finds the expense of caring for a male during the whole year considerable of a burden. This applies not only to the food consumed, but to the extra care that must be taken in handling this class of animals. The experience of a Missouri subscriber indicates one way out of the difficulty. In a recent communication he says:

Many farmers become discouraged in owning good sires for their herds, as it takes considerable feed and care to keep them in proper condition for breeding, and other farmers who have no sires impose upon those who have them, by bringing their females to these sires for service.

There are two especially discouraging features to this: First, the farmer who owns the sire, in a neighborly spirit, allows too many animals to be bred to him, which lowers his powers as a breeder, not only giving him an unsatisfactory grade of offsprings, but branding him as a sire of poor breeding qualities, when it is through no fault of his that his get is of no higher quality.

Second, it is a fact only those who have investigated or learned by bitter experience know that not one farmer in a half dozen ever pays anything for such breeding services. This is the most discouraging phase. We are not assuming that all farmers do this purposely. Some intend to pay the breeding fees, but forget about it; some keep putting it off until it seems like paying for a "dead horse," and they gradually let it pass from their mind; others simply regard it as a piece of neighborly kindness; while still others (sad to say) intentionally let the matter drop and consider the service as so much "clear gain."

The way around this difficulty is easy. A man may lose some supposed friends by it, but he will not lose any service fees. Simply make a charge for every female the sire serves, agreeing to return all money paid in case the breeding is not effective. Make this an ironclad rule, let it get the rounds of the neighborhood, and every man who wants to do the fair thing will walk up like a man and pay the fees in advance. That rule was laid down right here on this farm, and it so insulted the first old farm-dad that brought a female here for breeding that he indignantly took her back home without breeding her. That class of men is the very one this rule is aimed at, and the sooner we are entirely rid of them the better, for these discouraging features to the keeping of good sires is wielding a detrimental influence on the live stock industry in many localities, since it is practically a dead expense on the man who keeps the sires.

If this plan could be generally introduced it would be an aid in bringing about the use of better sires. Those who own small herds and could not afford to keep a male will very soon find the beneficial effect of a good sire even in the first generation and when they have this practical demonstration before their eyes they will not complain even though the service fee should be fairly proportionate to the merit of the male that is used and to the cost to his owner.

FARM FURROWS

TURNED BY A PRACTICAL FARMER

Don't forget that if the roots of evergreens are exposed to the air, even for a minute from the time they are taken up at the nursery until they are set on the farm, the young tree will be liable to die. No amount of soaking in water can bring back life to the roots of evergreens after they are once dried. When the trees come from the nursery they should be unpacked and placed in a tub and taken out one by one and set as quickly as possible.

Make sure that the spring drainage around the house and barn is not dumping the filth of the farm into the well from which your family secures the drinking water.

Keep up the old, faithful scythe, or buy a good new one, and be all ready for the war on weeds, the very day they begin to mar any part of the premises with their unsightly greenness.

If you expect the maximum quantity and superior quality of cream from the milk your herd produces, to secure it with the minimum amount of labor in tending to that milk, a more uniform test, greater and easier profits in every way, don't start through the summer dairy season without a good cream separator.

Beef calves will not stand for half rations of milk at the beginning of their career.

Don't get in a "toot" about planting anything and everything so early. Make sure that the soil is warm and conducive to rapid germination before risking high-priced seed in it. Often this plan not only saves time, labor and seed, but it actually insures an earlier stand of vigorous plants than this "early-bird" planting.

One had about as well abuse a cow as the cream separator.

Promise the boys and girls a pig, calf or colt for assisting in the care of this season's crop of young animals. You thus will be training them up in the useful art of animal husbandry, and, at the same time, be encouraging them, through the reward for their efforts, to remain on the farm (and make sure that you keep your promise).

It is doubtful if one should risk sowing alfalfa on land that has been badly infested with weeds heretofore, as the pests are apt to smother out the tender growth. In any case, it is best to sow the alfalfa immediately after the seed bed is prepared, so the stand will get an even start with the weed pests and have a chance of surviving.

Let the fresh air and sunlight sweeten the milk pails.

Plan right now not to let the poultry run in the yard and scratch up the flower beds of the wife and daughters. The fowls not only do this where they have free access to the lawn, but they muss things up in general about the house. With very little effort and at small expense, you can run a chick-proof fence around the yard, which will enable you to maintain a neat appearance about the house, and save you many aggravating experiences with the chickens.

Nature humpeth herself! Go thou and do likewise!

About this time of the year, we go over the fruit and vegetables in the cellar and storage pits, sorting out and discarding all that is badly decayed, and putting the other where conditions will be favorable to keeping it for future use. With apples, we make three assortments. One is worthless. Another must have the decayed portion cut out and what is good of it canned or cooked for table use. The rest, which is in fair condition for keeping, is carefully wiped clean and dry, wrapped in thin paper and stored away in barrels or boxes in some cool, dry place, a layer of thick paper being placed between each layer of fruit. These should be examined occasionally for a few weeks, and any that are beginning to rot thrown away, to avoid their coming in contact with and spoiling the other fruit.

If you have no place to keep rivets, screws, clout nails and other small articles you will need that spice cabinet that can be bought for a few cents. It will answer the purpose to perfection. Don't forget to buy or order one for your wife at the same time.

Plant at least one tree this spring, no matter whether it is an apple, plum, peach or even a cottonwood. The fun of seeing it grow will more than pay for the work.

The red cedar is a slow growing tree, but it is hardy and makes a fine-looking tree. It makes a good windbreak, but many authorities claim that it should not be planted near the orchard because it is liable to cause apple leaf rust.

Have the chicken roosting quarters equipped with smooth, 2x4 lumber for roosts, so the mites will not have any place in which to harbor.

Trying to bring better results in the shape of good roads with the money now on hand for road purposes is a move in the right direction. When this is done it will be easier to raise more money to carry on the good work. It is not the good roads but the fat offices the farmers do not like to pay for.

The small boy who turns his little rifle against the song birds should not be allowed to have one. He has the making of a criminal in him.

Another handy thing to have in the farm shop is a box to keep the auger bits in. It provides a place where the bits can be found when wanted and the habit of keeping them there should be formed. It will take longer to hunt up a bit somewhere about the shop or farm the next time it is to be used than to put it in its place after each job is finished.

Exercise is as important as feed to the brood sow before farrowing time, and one way to bring this about is to have the feeding place some distance from the sleeping quarters. Another way is to "accidentally" leave the gate open and allow them to take a walk into the fields that are fenced hog tight.

As far as the quail is concerned the "No Hunting" sign should include members of the family as well as outsiders, law or no law.

Bees will live and perhaps increase a little in a dry-land country, but would be of no use to their keepers unless pastures are provided for them. White sweet clover to the extent of half an acre to the colony would be almost a guarantee of success. There are things, such as white clover, alfalfa, buckwheat, alsike, clover, all kinds of fruit trees—any of the above that will grow would be good, but the sweet clover will grow and prosper in any soil or climate, wet or dry, cold or hot.

No-Rim-Cut Tires
10% Oversize

Not Built Like Old-Time Tires

Goodyear tires of today are not built as they once were, nor as others build tires now.

Goodyear success is due to ceaseless advancement. Every increase in sales came through increasing mileage.

And now, after fourteen years of betterments, scores of our experts spend all their time on research and experiment.

How They Work

These men wear out, on a metered machine, hundreds of Goodyear tires.

To get our tread as we make it today, 40 formulas were compared—by actual metered mileage.

To get a fabric which would stand all strains, 200 fabrics were tested out, and mileage results recorded.

These comparisons have gone on for years and years. And they still go on night and day. For we know that no tire can lead in sales unless it also leads in mileage.

What They've Done

This research department cost us about $100,000 per year. On this year's output that's about five cents per tire.

But note the result:

All the remarkable mileage you get from Goodyear tires is due to this ceaseless improvement.

No-Rim-Cut tires—the tires that end rim-cutting—were developed in this shop. With the old-type tires, 23 per cent met with rim-cut ruin.

And from this shop came the 10 per cent oversize, which adds one-fourth to the average tire mileage.

Men Not Misled

In these days of odometers, men know which tire serves best. And that tire alone can outsell all others.

Under this test Goodyear tires have outsold every other tire in existence.

And the sales have doubled over and over, as the tires became better known. Last year's sale by far exceeded our previous 12 years put together.

That's the result on actual use, on hundreds of thousands of cars. And you'll adopt them, like the rest, when you once try them out.

Average Profit $2.90 Per Tire

Here's another reason why you get so much in a Goodyear tire. Our average profit last year was but $2.90 per tire.

Goodyear tires cost all the way from $15.55 to $104.95, according to size and type. The most popular size—34x4—costs from $32.95 to $37.90, differing with type and treads. And our average profit on all these tires was exactly $2.90 per tire.

That's why you get at the Goodyear price tires with so much mileage. Tires that can't rim-cut—oversize tires. This is due to the fact that so much of the cost goes into things that count.

No other tire in all the world offers you equal value.

CURRENT EVENTS

BREAKING the precedent of more than a century's standing Pres. Woodrow Wilson delivered his tariff message to congress in person. Both houses met in joint session and listened with the closest attention to what the president had to say. Heretofore the president has been in the habit of sending his written message by messenger who all too often has read the message to empty seats, the few congressmen present paying but scant attention. President Wilson is proceeding on the theory that he is not only the leader of his party, but the president of the country regardless of party, and believes that it is up to him to show that the president is a "human being trying to co-operate with other human beings in a common service." The president's message was exceptionally brief, its delivery occupying but eight minutes, whereas most of his predecessors have relieved themselves of messages the reading of which has occupied an hour or more and the printing of which has required whole pages of newspapers. President Wilson has unusual clarity of expression, as, for instance, when he rescued himself, as he expressed it, "from that isolated island of jealous authority," which the presidency has come to be regarded. The following paragraph shows the manner in which the president discussed the democratic plans to remove existing protection: "We must abolish everything that bears even the semblance of privilege or of any kind of artificial advantage, and put our businss men and producers under the stimulation of a constant necessity to be efficient, economical, and enterpr'sing, masters of competitive supremacy, better workers and merchants than any in the world. Aside from the duties laid upon articles which we do not, and probably can not, produce, therefore, and the duties laid upon luxuries, and merely for the sake of the revenues they yield, the object of the tariff duties henceforth laid must be effective competition, the whetting of American wits by contest with the wits of the rest of the world." Later on in the special session the president proposes to take up other important matters, chief among them being the reform of our banking and currency laws. For the present, however, he confined his attention and congress will confine its deliberations to the tariff situation.

DIRECT election of United States senators is now duly and legally provided for. The requisite number of states have ratified the proposed constitutional amendment put up to them by congress only a year ago, Connecticut being the thirty-sixth to take such action, the past week. Hereafter all United States senators will be elected by direct vote of the people the same as congressman, governor or any other state official, the names of the senatorial candidates to be printed on the regular ballot. From this time on the state legislatures will have nothing whatever to say on the selection of senators, except so far as they have general supervision over the manner of conducting state elections. Special session of the legislature will be necessay in many states to enact the necessary laws to put the new rule into force. After fifty years' effort the constitutional amendment has been brought about within the past year, much more easily than was anticipated. President Wilson expressed himself as sincerely glad that the amendment has been ratified so promptly and the reform so long fought for at last accomplished. The measure is one to which the progressives of all parties have pledged themselves for some years past and brings closer to hand the day of direct rule of the people.

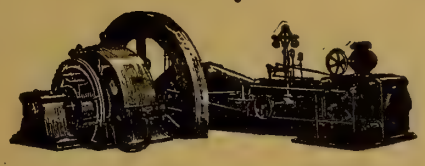
THE new tariff bill, which has already been introduced in congress and which has the approval of President Wilson, provides for free wool, free wheat, free meats, free sugar within three years and the removal of the existing duties from a majority of the necessities of life. While wheat and flour are put on the

(Continued on page 13.)

A Simple Idea Behind a Simple Starter

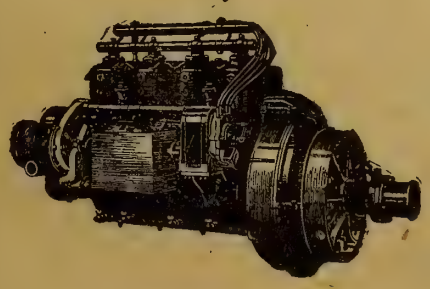
This electric lighting idea

Every Pullman car in the land is giving a daily demonstration of the Cross Country electric lighting system. Motor generator directly connected to axle for lighting purposes.



Coupled with this power idea

Allis-Chalmers direct current generator directly connected to a heavy duty Corliss engine. This is the type used in the Jeffery factory power plant—but much smaller.



Produced this perfected starting and lighting system

The Cross Country gasoline engine is directly connected to the electric motor generator. No chains; no gears; not even an extra bearing.

IT is not strange that the ideal self-starter grew out of a simple thing. For many years a great corporation has been making motor generators to attach to the axles of Pullman cars for lighting purposes. The application is direct and the light generating capacity positive. One day a man attached a similar motor generator to a gasoline engine and by a simple arrangement made it serve as a fly wheel. He simply adopted a principle proved practical by the builders of the great Allis-Chalmers power generators. It is not a new, untried experiment, but an old principle simply applied to a new use.

THE attachment of the electric generator to the Cross Country gasoline motor is not an afterthought. Little weight is added. There are no extra bearings, no chains, gears or belts. The parts are large and substantial. There isn't a single delicate piece. The result, of course, is efficiency.

STOP and listen when you see a Cross Country owner starting his car. Even in the most quiet street the sound will hardly be audible. You will recall that some puff, others grind and a few squeal. This one operates quietly, starting the motor without jerk or jar. There is only one operation. Others require three. The lighting system is positive and the lights brilliant. You will know the Cross Country if you meet it on a country road on a dark night.

A beautiful four-color reproduction of the Cross Country, from an oil painting by R. Philip Brainard, is ready for mailing. See the Cross Country by all means, at any Jeffery branch or dealer's display room, but send for the picture anyway.

AMERICAN SHEET AND TIN PLATE COMPANY

General Offices Frick Building Pittsburgh, Pa.

Keep the Grain Out of Your Straw Pile

All threshing machines are not alike. There is one different from all others. It has a different way of taking the grain out of the straw. **It beats it out** just as you would do by hand with a pitchfork. All other machines depend upon its dropping out.

This one different machine is the Red River Special and you should insist upon having it do your threshing. It will save all your grain and waste none of your time.

It saves the Farmer's Thresh Bill.

It has the Big Cylinder, the "Man Behind the Gun," the patented Grate and Check Plate, the greatest separating devices ever built.

The Big Cylinder drives the intermingled straw, chaff and grain against the separating grate, **beating** the grain through where the check plate catches it and delivers it to the grain pan and mill.

Ninety-five per cent of the grain is taken out right there.

The straw goes over upon the shakers which hold it and **beat** it until all the grain is **beaten out.**

In all other kinds the straw is hurried out of the machine and the grain is expected to drop out.

It doesn't. Thousands of green straw stacks every year loudly say it doesn't.

The Red River Special saves all this. Insist upon its doing your work this year. **It will save your thresh bill.** Write for proof.

To Whom It May Concern:

I. J. Knudson, farmer, of McHenry County, North Dakota, do depose and say that during the summer of 1908 I bought of Nichols & Shepard Company a threshing outfit, consisting of one 20-horse power, double cylinder traction engine and one 32x52 Red River Special Separator with wind stacker, self-feeder and weigher attached.

That on or about August 23, 1908, I started this outfit near a stack of old straw that had been threshed in 1907 by a ——— separator, and to stretch the belts on the new machine I caused a small load of old straw from the stack in question to be run through the new machine and was surprised to get over sixteen bushels of oats from this load of straw.

I afterward threshed out the **balance** of this stack and got 347 bushels of grain.

(Signed) JAMES KNUDSON.

Subscribed and sworn to before me, a Notary Public, in and for McHenry County, North Dakota, this 6th day of Feb., 1909.

[Seal] J. EDGAR WAGAR. Notary Public.

My commission expires March 27, 1914.

GROWING CUCUMBERS SUCCESSFULLY.

To the Editor of The Homestead:

Cucumbers will do best on a sandy loam that has been well enriched by a liberal application of well-rooted manure, but very good crops can also be grown on heavy clay providing that the soil is made loose by mixing a shovelful of well-rotted manure with the soil of each hill. It is also a good plan to mix some sand with each hill where the soil is very heavy and apt to bake.

Cucumbers are very rank feeders and for this reason there is little danger of getting the soil too rich. The only thing to be guarded is to see that when manure is applied in the hill it is well mixed with the soil, as sometimes if it is all left in one place, the young plants will be burned when the roots get into the manure.

Some gardeners sow cucumbers in drills five feet apart and thin out the plants to stand one foot apart in the row. However, the best way, and the one most generally practiced, is to plant in hills about five feet apart each way.

The first planting may be made when the ground is quite warm and danger from frost is past, which is usually about the time the trees are coming into leaf. Prepare the hills as directed above and plant from fifteen to twenty seeds in each hill so as to make a liberal allowance for the striped bug, which is quite sure to make its appearance. Cover the seed about three-fourths of an inch deep and pat the soil down with the back of the hoe, but do not pack it. If it should happen to rain and the soil bake before the plants are up the crust should be carefully broken with the fingers or a fork as the young plants very often cannot get through the crust unaided.

As soon as the plants are coming through the soil the bugs should be watched for. In many cases they will eat the plants before they are entirely out of the ground. Tobacco dust, wood ashes, soot and air-slaked lime are the means used to drive away these insects, but the writer has found that soot is about as effectual as anything that can be used.

It is a very good plan to apply any of these remedies as soon as the plants commence to come through, even if there are no bugs to be seen, as in this case an ounce of prevention is better than a pound of cure.

As the plants grow they should be dusted every few days. Apply same early in the morning while the dew is still on, thus causing it to adhere, throwing it well under as well as sprinkling it over the plants.

When the plants are up commence hoeing or cultivating at once, working all of the soil close up to the plants, for working the soil well up to the plants not only loosens the soil and kills the weeds, but also disturbs the bugs.

Hoeing or cultivating should be done quite frequently until the vines commence to run. As soon as the plants commence to run or vine they should be thinned out to the three best plants to each hill. If the ground is kept well hoed or cultivated until the plants commence to run they will require but little attention thereafter, as the vines will soon cover the ground.

Cucumbers should always be cut, never pulled, from the vines, as this latter method disturbs as well as greatly injures the vines. The fruits should be picked as soon as they are ready for use, as if they are allowed to ripen the crop will be cut very short, as the vines soon die if any fruits are left on them until they turn color.

Cucumbers for the late picking crop need not be planted until the middle of June or beginning of July. A good plan is to plant the seed among early potatoes, making hills as directed above. When the potatoes are gone the cucumbers will have made a nice start and you will thus be able to get two crops off your land which would

FIGHTING the bugs and insects that attack your vines means constant vigilance and the strongest weapons.

No better weapon than Devoe & Raynolds Co.'s Pure Paris Green. Use it promptly and in the right spot and you'll rout the bugs.

Growing more and better fruit is pretty certain if you use Devoe sprays—Arsenate of Lead or Lime and Sulphur Solutions; they're reliable brands.

When you order, ask for Devoe goods. They are good enough to insist on getting.

otherwise lie idle after the potatoes are dug.

In many ways it is better to plant the crop for pickles late, as the bugs, as a rule, do not bother the later plantings nearly so much as the early ones; also the plants will just about have commenced to set fruits when the hot weather is over and in cool weather the pickles seem to be of finer quality than those that come on during the hot summer months.

Cucumbers of all sizes should be picked early in the morning, as they will then be much more crisp and tender than if allowed to remain on the vines until the middle of the day.

J. W. Jung.

GRASSES THE MOST USEFUL PLANTS.

Probably the grasses are the most useful plants in the world. It may be that more than half the individual plants in the world are grasses. It is a great family of more than 3,500 species, embracing species that are so tiny that they hardly reach an inch in height, and giant bamboos of the tropics that sometimes grow to be 100 feet or more.

Corn is a giant grass; and wheat, rye, oats, barley, rice and sugar cane are all grasses. Then there are millets, sorghum, kaffir corn, broom corn —all grasses.

The number of species of grasses is enormous, yet we have adopted into our system of agriculture but a few sorts. In part that is due to the ease or difficulty of seeding grasses. Timothy grass, for example, is so easily sown and the seed so easily gathered, that it is soonest set of any, and has become the standard hay grass of northern climes.

In some regions of Kentucky blue grass is the almost universal pasture grass because it comes in of itself; in other regions with different soil (poor and lacking in lime) redtop has possession. Naturally the farmer follows the line of least resistan e, yet it is by no means certain that he has adopted into his agriculture all the best grasses that nature has provided.

On the mountains and hills of Utah, for instance, once grew wild bunch grasses that would keep cattle fat all through the winter, standing dry, yellow and cured on their stems. We have not yet learned to use that bunch grass in cultivation; maybe we shall never learn to use it. Some day we shall do more toward using now neglected grasses.—[Joseph E. Wing in "Meadows and Pastures."

FAST GROWING TREES.

A subscriber of this paper writes to ask which is the fastest growing tree for a windbreak, Carolina poplar or catalpa? Without doubt the poplar is the most rapid grower of any of the deciduous trees. It is probably a third faster grower than the catalpa, but while it grows so fast it is not considered very valuable for windbreak. A windbreak must grow close to the surface and branch out and carry foliage low down. This is exactly what the Carolina poplar does not do. It grows so fast, making a loose top, and the lower branches speedily dying, that there is nothing to break the wind but the spindling trunks.

The catalpa will branch more, but that is too open for a desirable windbreak. Few of the summer trees are desirable for windbreak purposes. Elm and maple are too tall growers. They incline to make heavy tops, but they are too far from the ground to stop much wind. Perhaps the box elder is the best for this purpose, for if given room it will branch out and make a low, scraggy growth.

Any of the deciduous trees if topped back may be made to sprout out, making numerous stems, and for a time you will have much foliage close down. But the stems will run up as fast as possible, some will overcrowd the others, and the weaker ones will die out. As it tends to its natural end gradually only one of the stems will survive and the branches will all be where nature would have them, high up in air and of no use for windbreaks.

From the nature of trees the evergreens are fitted to be windbreak trees. They branch out near the ground, and if left to grow as they would they form a perfect pyramid, the

Regal

Choose An Underslung

The Car Suited for Country Roads

YOU will do most of your driving over country roads. The car you buy must be suitabe for these roads. It must be built low—not too low—and it must be safe.

The safest cars today are those built the Underslung way. Their constructions—the frame below the axle—brings the weight nearer the road. Whether you are driving over smooth roads, sandy roads or slippery roads, the car stays on the highway.

To be prepared for all kinds of roads you should choose an Underslung. Whether or not you purchase a Regal Underslung, your choice should be one of these "safest" cars. We know that in an impartial consider ation of the other cars and the biggest value, you will want to see and ride in a Regal Underslung.

This Regal Underslung touring car, shown below, has been designed to meet the demands of country travel. Primarily it is a safe car. With the weight hung low, it overcomes the danger of "turning turtle" and lessens skidding. Its road clearance is not only ample but also even. All the vital parts of the motor are protected with a flat dust pan. A Regal Model "T" can go anywhere another car can travel and where many cars cannot.

Besides a feeling of safety the owner of one of these Regal Underslungs finds additional satisfaction in the appearance of his car. The low rakish body gives it that "different" look which makes a man proud of the car he drives, The nickel-plated trimmings, electric lights and luxurious upholstering are further factors for beauty, comfort and satisfaction.

As one intending the purchase of a car for country travel, you owe it to yourself to learn more about this car and the other Regal Underslungs. See and talk with the nearest Regal dealer or, in case there is no Regal representative near you, write us at the factory.

Write today.

The Adriance Binder

For Over Fifty Years a Favorite the World Over

The above reproduction from a photograph shows an **Adriance Binder** in use in Siberia where thousands of **Adriance Binders** and **Mowers** are giving excellent service under most trying conditions.

In all parts of the world this time tested Binder is growing in favor, more and more each year.

It is growing because it is a better binder than any other. Gives better service—is more simple in construction—lighter draft—costs less for repairs. Its design is such that it works easier—without the strain and wear of other binders, consequently less time lost and less breakage.

Its materials are the very best and every wearing part has been carefully and scientifically designed to produce the greatest durability with lightness of draft.

FOR LONG OR SHORT GRAIN FOR HEAVY OR LIGHT CROPS

The Adriance Binder will handle long or short grain, heavy or light crops equally well. It can be instantly changed, without the driver leaving his seat, to bind grain anywhere from 20 inches down to 7 from the butts, making a square butted, well-tied bundle in every case.

ADRIANCE BINDERS GIVE BEST SERVICE FOR LONGEST TIME AT LEAST EXPENSE.

lower branches, if plenty of room is allowed, sweeping the sod in continued health. That makes the perfect windbreak with the branches where they are needed. It follows, of course, that if the conifers are crowded (as in a forest) the limbs at the bottom will die off. Limbs die when shut out from sunlight, but give your trees plenty of room and the lower limbs will persist.

You may at first plant them ten feet apart, and then in five or six years it will be necessary to cut out half of them for Christmas trees, and these can usually be sold at a profit.

Whatever else you do, having set out evergreens for a windbreak, do not make the mistake of letting them grow up so thick that their windbreak value is destroyed through the loss of the lower limbs. Better as soon as they begin to suffer from crowding (or a little before) go in with a sharp ax and a resolute mind and chop out half of them.

SPRING PRUNING OF FRUIT TREES.

To the Editor of The Homestead:

I have always believed in autumn pruning, but last fall I was so busy with various repairs, etc., about the farm that I neglected to prune a number of peach trees on my place until the 15th of March, when I noticed that several of them, and two in particular, were badly in need of pruning, so I trimmed off all the low, downward tending limbs, and a few among the top branches which were crooked or broken, or which rubbed against each other.

In fact, when I got to work on these two trees I found so many limbs which I saw should come off that I pruned the trees somewhat severely, and as we had rather warm weather for the next ten days these trees began to put out leaves before the buds on the trees I pruned last fall had begun to swell. The result was that when we had another spell of freezing weather last week the buds on these two trees were killed, while the trees pruned last autumn were uninjured.

During the latter part of the winter, even before the cold is out of the ground, there is at least some sap rising in fruit trees and other trees, but not enough to swell the buds under ordinary conditions until the ground begins to warm up. However, it seems that as a certain amount of sap is rising and flowing out to the tips of the limbs, if the tree is pruned severely this leaves fewer branches for a given amount of sap to flow into, so it makes a larger proportion of sap for each limb left on the tree, and this excess of sap forces the buds out prematurely. I cannot see what other reason should have caused these two peach trees to bud out so early as to get their tender leaves killed.

In the case of early blooming fruit trees like peach trees it seems wise to prune them always in the autumn, so the cut wood will cure, sear over and harden by the cold, and in order that the sap may not rise so strongly in the spring, for, of course, the larger and more bushy the top of a sturdy young tree the more strongly does it begin to pump sap up from the roots in the ground in the early spring, and if you decrease considerably the size of the tree's crown just at this time it is natural that the sap, being distributed to a smaller number of limbs, should force the buds out prematurely. In fact, whether fruit trees are early blooming or late blooming it is better to prune them in the autumn or not at all. Also beware of stirring the soil around trees too early in the spring, as this starts the sap to rising more freely.

A peculiarity about one of these peach trees which I pruned so severely this spring was that it stood on the south side of a large barn or rather the barn was on the north and east side, as it is built in a kind of ell. This put the tree in a warm pocket on the south and west side of the barn, where the afternoon sunshine fell upon it, causing it to put out leaves more quickly than the other one. It was shielded by the barn from the cold north wind, and this, together with the severe spring pruning, proved a serious disadvantage to it.

LEGAL DEPARTMENT

SUBSCRIBERS who desire questions answered in this department should base them upon a brief, plain, concise statement of the actual facts. To insure immediate attention, inquiries should be addressed to "The Legal Department," in care of this paper; but as the inquiries sent are at times very numerous, thus delaying printed answers, those to whom it is important to receive an immediate reply by mail, should remit $1.00, addressed as above. All inquiries must be signed if they are to receive attention.

LAW QUESTIONS CONSIDERED.

WAGES BY THE HOUR.

A Subscriber, Dannebrog, Neb.—I hired a carpenter to build a house and agreed to pay him so much an hour for his work. He lives in town, two miles away from where the house is being built. I give him his dinner every day when he works. Nothing was said in the contract about the time it takes going to and from the work. Can he recover pay for time spent in going to and from my place?

Answer.—The carpenter is entitled to pay for the hours he actually works for you in building the house, and not for time spent in going to and from the work.

STANDARD WEIGHT OF OATS.

Mr. W. J. Mead, Lime Spring, Iowa.—I understand that the law in Iowa regulating weights and measures fixes the weight of oats at thirty-two pounds per bushel. The various grain buyers along the Great Western and M., St. Paul and Minneapolis railroads, for some distance, take thirty-three pounds of oats for a bushel. (1) Is there any way to prevent them from taking that extra pound on each bushel they buy? (2) Cannot the state authorities act, or the farmers prosecute the dealers who take extra weight?

Answer.—(1) The law provides that all contracts for anything to be sold or delivered by weight or measure shall be taken and construed according to the standards of weight and measure adopted as the standard of the state of Iowa. In this standard oats is fixed at thirty-two pounds to the bushel. Therefore where oats is sold at a certain price by the bushel the seller can recover by law from the buyer the value based upon said standard of thirty-two pounds to the bushel. There is no criminal offense involved unless the buyer uses false scales or measures. The buyer's refusal to allow for the extra pound in each bushel makes him liable to a civil action, but not to a criminal prosecution. The state authorities have not power to act, neither can the farmers prosecute the buyer for crime.

TENANTS IN COMMON—NOT PARTNERS.

A Subscriber, Pukwana, S. D.—About seven years ago I traded a half section of land in South Dakota for a store building in Iowa. I gave the agent who brought about the trade a half interest in the building for his commission and the building was deeded to him. Later on he traded the building for land and then traded the land for a stock of merchandise, and then traded the merchandise for land, and recently sold the land for about $20,000. The building was worth about $4,000. We never had any settlement, and now he claims that my half interest in the building ceased when he traded it off, and is willing to allow me half of what he received for it, and no more. Am I not entitled to half of all the profits made in the various transactions, and if I am, how can I recover the same? He has no property in this state.

Answer.—You are not entitled to one-half of all the profit made in the various transactions. You and the agent were not partners, but simply tenants in common of the buildings, each owning an undivided half thereof, the legal title being wholly in him. When he traded it off you were entitled to half its actual value, and you can recover that with interest till now, provided the agent is financially responsible.

SALE OF FARM—DESTRUCTION OF BUILDING.

A Subscriber, Shelby, Iowa.—A is administrator of an estate and was authorized by the court to sell certain described real estate having buildings on it, belonging to said estate. In September, 1912, A sold the property to B, receiving one-tenth of the purchase price, agreeing to convey same and give possession on the 1st of March, 1913, when B is to pay in full. A little while after this sale B sold the property to C under the same kind of a contract. In January, 1913, a tenant living on the place, by accident burned a buggy house thereon. In the several contracts no mention was made of buildings on the place. Who must bear the loss occasioned by the burning of the buggy house?

Answer.—The various contracts for sale of the property not having been consummated or complete at the time the buggy house was destroyed the loss occasioned by the burning must be borne by the estate. The estate therefore must make the loss good to B and B in his turn must make it good to C. If, however, the burning was caused by the negligence or carelessness of the tenant he is liable to the estate therefor.

NOT FIXTURES.

Mr. L. E. Long, Fredericksburg, Ia.—When A sold his farm to B nothing was said about a hand cream separator which was fastened to the pantry floor with four screws, nor about a portable pump jack that was clamped to the pump. Can B hold these articles as fixtures to the farm?

Answer.—The articles mentioned are merely personal property belonging to A, and he has a right to remove them from the place at or before the time of giving possession. They are not fixtures and B has no right to hold them.

SALE OF LAND—RENTAL—DEBT.

Mr. J. J. Whisler, no postoffice, no state.—In 1912 I gave to B a contract for deed, and also deed for eighteen acres of land, which were never recorded, in consideration of $2,000, drawing 8 per cent interest, but had the option to pay this January 1, 1913, which I did, or caused to be paid, and B now has the money. (1) Had B a legal right to the rentals from the land? (2) B owes me $155.60 for labor performed for him during the season. He now claims he does not owe me anything. Can I recover this amount, and how shall I proceed to do so?

Answer.—(1) Whenever the party buying the land was entitled to possession of it under the contract, he was from that time entitled to all rentals. (2) We do not know. You and B differ widely as to the matter, and we do not know which is right. If your claim is good, you can recover judgment therefor against B by suit.

CONTRACT FOR PRINTING.

A Subscriber, Dexter, Iowa.—A is a stock company operating a telephone exchange. B is a lineman and manager of the company. C is a printer. B employed C to print telephone directories for the company, which was done according to agreement, and B promised to pay therefor as soon as he could collect for advertising in the directories. The matter has run for nearly a year and B has not paid C.

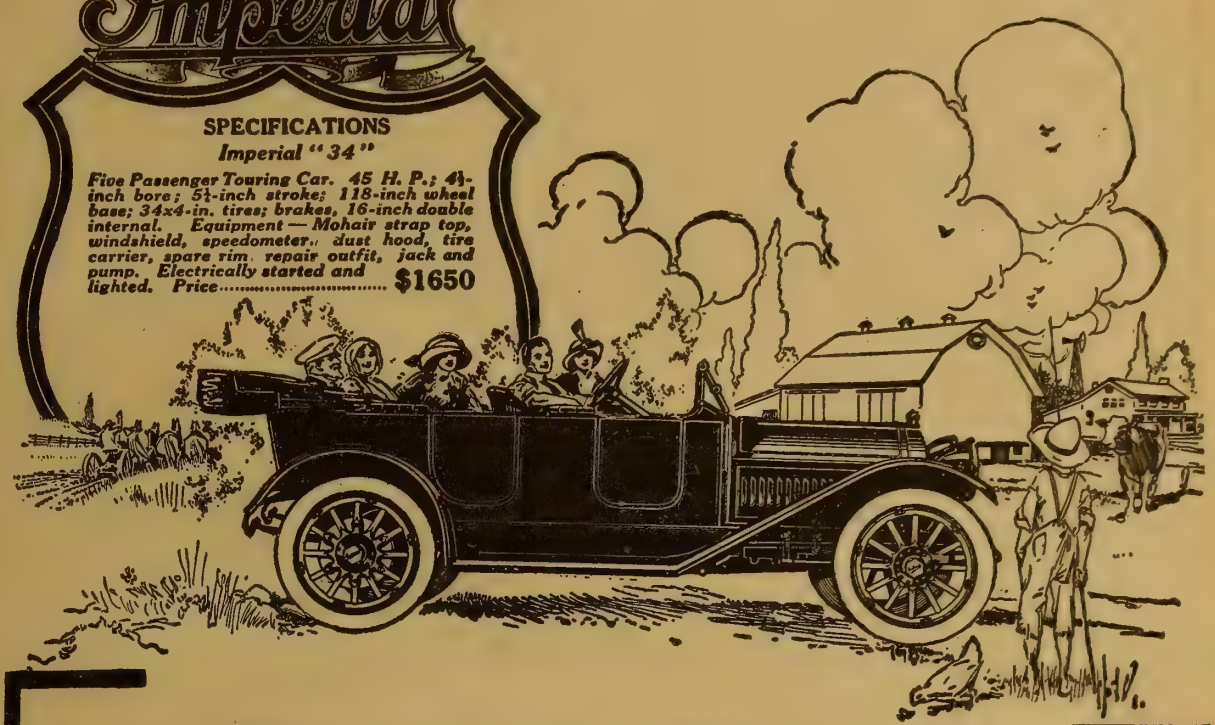
Imperial

SPECIFICATIONS

Imperial "34"

Five Passenger Touring Car. 45 H. P.; 4¼-inch bore; 5½-inch stroke; 118-inch wheel base; 34x4-in. tires; brakes, 16-inch double internal. Equipment — Mohair strap top, windshield, speedometer, dust hood, tire carrier, spare rim, repair outfit, jack and pump. Electrically started and lighted. Price..... $1650



"Imperial Wins!"

—the Verdict of Thousands of American Farmers

The American Farmer is a critical judge of automobile values. He knows absolutely what endurance power a car *must* have to withstand the wear and tear of country roads. Thousands of representative farmers have purchased Imperial Cars. They received the *highest automobile* quality at the *most* consistent, *moderate* price. They have enthusiastically endorsed the Imperial. Their verdict of approval should lead you to give our cars your serious attention.

Quality Always Wins Out

1000 men under the leadership of experts, build the famous Imperial models. No car leaves our vast factory until it is declared by our testers to be 100 per cent efficient. Inherent in every Imperial is a maximum of power, strength, durability and service. Every Imperial owner has found, by experience, that our assertions are not "paper claims." *Imperial quality has won out.*

Economy in Cost

When you purchase an Imperial you will not be called upon to pay an exorbitant, fancy price. We are satisfied to build cars and get a legitimate, reasonable profit. Because we build them in one of the largest, individual automobile factories in the world, equipped with the latest devices known to auto science, we are able to offer the highest values at extremely moderate prices.

Imperial Best for Country Service

For country use you demand *Power above all in a car.* You will find a tireless, lasting motor in the Imperial. It creates a big surplus of power. It defies the steepest hills — carries you through sandy or muddy roadbeds. It is Silent, Simple, Accessible. The Imperial clutch, transmission, motor and control lever are combined in a single power plant. This keeps all parts in perfect alignment and eliminates unnecessary friction. Imperial bodies are noted for their sweeping lines of beauty. Comfort has been developed to a remarkable degree.

Imperial "34"—A Triumph

Imperial "34" has never failed the farmer. Thousands of them are giving continuous and remarkable service in every part of the country. You can take a just pride in this car. Your friends will admire your judgment in selecting it. You will find in it constructional superiorities not found in cars costing at least $1000 more. It means low First cost—Small Maintenance. Every part is built to insure you against trouble. Remember, its simplicity of operation makes it easy for your wife or even your children to drive. And all these values for..... **$1650**

Imperial "34"—Roadster

This model won such nation-wide approval on account of its power and endurance that hundreds demanded the same values in a roadster. Consequently, we have constructed a perfect roadster, endowed with the same enduring life, for the same moderate price, **$1650**

FOUR OTHER TYPES

Imperial "54"—7-Pass'r Touring Car; 6-cyl. cast in threes; 60 H. P.; 4½-inch bore; 5½-inch stroke; 137-inch wheel base; 36x4½-inch tires. *Electric Starting and Lighting System.* Complete equipment... **$2500**

Imperial "44"—5-Pass. Touring Car; 4-cyl.; 50 H.P.; 4½-in. bore; 5½-in. stroke; 122-inch wheel base; 36x4-inch tires. *Electric Starting and Lighting System.* Complete equipment. **$1875**

Imperial "33"—2-Passenger Roadster; 40 H. P.; 4½-inch bore; 5½-inch stroke; 114-inch wheel base; 34x4-inch tires. Complete equipment..... **$1285**

Imperial "32"— 5-Passenger Touring Car; 40 H.P.; 4½-inch bore; 5½-inch stroke; 114-inch wheel base; 34x4-inch tires Complete equipment..... **$1285**

Imperials "54," "44" and "34" are Electrically Started and Lighted

National Conference on Markets and Farm Credits.

A CAMPAIGN has been successfully launched which has for its purpose the betterment of marketing conditions in order that the cost of taking farm products to the consumer may be lessened. At the first national conference on marketing and farm credits held in Chicago last week convincing proof was furnished to show that the farmer is at the present time getting too low a price for produce on the average while at the same time the consumer is compelled to pay more than he should pay for what he consumes. Products for which the housewives of America pay thirteen billion dollars annually are sold by the farmer for the sum of six billion dollars. This simply means that farm products for which the farmer receives forty-six cents costs the consumer $1. Included in the consumer's cost there is a 12 per cent waste which in itself amounts to one-half billion dollars annually. If the high cost of living, therefore, is reduced a saving must be effected in at least two respects, namely, in cutting out the waste and in selling expense.

Those who have berated the farmer for his failure to produce a sufficient supply of farm products and who have, therefore, held him responsible for this high cost of living were faced with facts at this conference which proved conclusively that the farmer is not to blame. Under the present system the farmer is penalized for raising a large crop, this being clearly proven by comparing the farm value of the 1911 and 1912 grain crops. Although the crop of 1912 exceeded the record of the previous year to the extent of more than one-half billion bushels, yet its market value was actually eighty million dollars less than in 1911. No other construction can be put upon this comparison than that the present system of marketing punishes or penalizes the farmer when he responds to the demand to raise a larger crop.

To point the way out of the difficulty and to make a beginning in he establishment of a system that would reduce the price to the consumer and increase the price to the farmer, was one of the chief purposes of this meeting and co-operation, as applied to producers and consumers alike, was the principle recommended by the conference. Some idea of the possibilities of improving selling methods may be realized by the study of a few concrete examples, these being given by Pres. Chas. R. VanHise, of the University of Wisconsin. When the farmers of Waupaca county, Wisconsin, were receiving thirty cents per bushel for potatoes, the consumers of Milwaukee were paying eighty-five cents a bushel. The expense of shipping was six and one-half cents a bushel, thus leaving a margin of forty-eight and one-half cents for the middleman, his services being paid for in this instance at the rate of 133 per cent. Another instance is that of cabbages selling at $83 a ton at River Falls, Wisconsin, and the same cabbages being purchased by the consumers of Chicago at $300 a ton, the freight between the two points being $3. Here was a profit of $217 a ton, or 250 per cent beyond cost. Hundreds of instances could be given of a similar character, all of which lead to the conclusion that the whole marketing system is antiquated. The line between the producer and consumer is too long. As the result of the exorbitant price that is demanded from the consumer, enormous quantities of perishable farm products go to waste. Instances were cited at this conference where a single car load of farm produce was made to meet the needs of a city or town and prices maintained at the highest point, whereas the same market in many instances would absorb five car loads of the same produce at prices having some relation to the value which the farmer received for his produce.

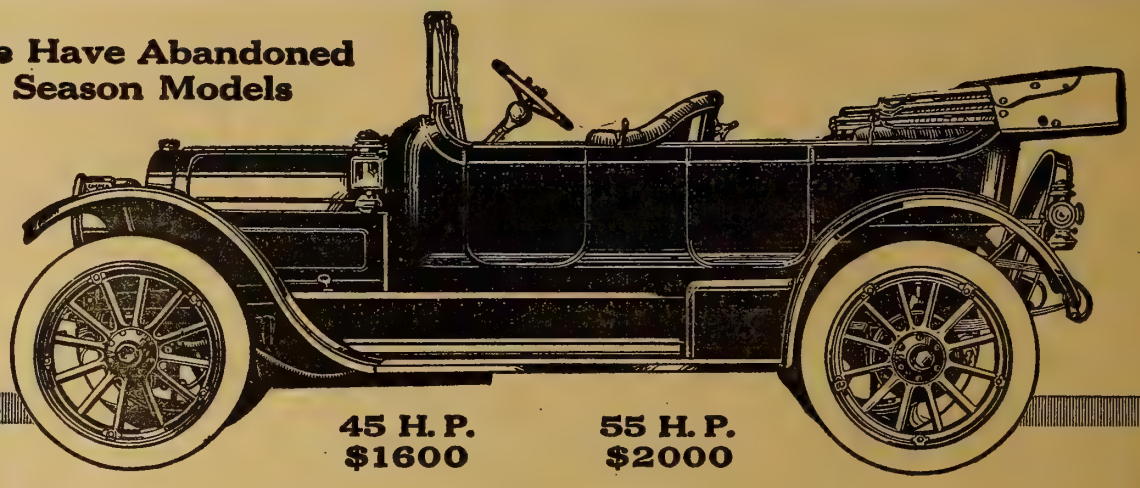
In many instances loss results from glutting the market, one case being cited where a car load of onions was shipped to Philadelphia and sold for $9 less than the amount of the freight charges. This example possibly more than any other shows the great need of some kind of co-ordinate effort on the part of producers in a given locality in order that their products may be placed on a market which can absorb them at a price that leaves a profit to the producer. If the condition is improved, according to President VanHise, the solution must come from co-operation—co-operation of the producer, co-operation of the consumer, co-operation of the distributing agency with the producer and the consumer.

The conference endorsed the action of congress in appropriating $50,000 with which to make a beginning in the study of ways and means to bring the farmer and the ultimate consumer closer together. Prof. W. J. Spillman, who spoke in behalf of the department of agriculture, expressed the belief that as the need for this work became better known congress would respond liberally in order that a useful marketing bureau might be built up. Hitherto the department of agriculture has devoted itself largely to the problems of production, but, as pointed out by Professor Spillman, it is becoming more and more apparent that increased production will not in itself meet the needs of either the farmer or the consumer. The great problem that must be faced by the department, if it is to serve all the people effectively, must be to find some way to reduce the cost of distribution. In the case of certain crops it is believed by Professor Spillman that the new department can, to some extent, prevent overproduction which in all cases causes the farmer an enormous waste of labor.

In the matter of farm credits the conference emphasized the importance of making further investigations. No foreign system it was clearly shown would operate successfully under conditions that are so radically different as exist in the United States. Legislation will be needed in almost every state before any material change can be made in our banking system. Strong support in this conference was given to at least two changes affecting the financial interests of the farmer. In the first place some plan should be put into effect that would make farm mortgages negotiable so that they can become a common form of investment in small or large denominations. The second urgent need as affecting farm finance, relates to matters of personal credit. In the opinion of experts, who presented this matter to the conference, authority should be conferred by law on present banking institutions whereby short-time farmers' paper shall be made negotiable. Under certain restrictions this paper can be made practically as safe as the government bonds. With the endorsement of the local bank and with the further endorsement of the larger institutions as paper finds its way to money centers, it will in due time become a popular form of investment and thereby bring to the needs of the farmer the financial resources of the whole country. Not only is it desired that the farmer be given freer access to the financial resources of the country through his borrowing power, but a step in advance of this met with much favor in this conference, namely, that through a system of co-operation something shall be done for the landless man whose only asset is honesty, industry and integrity. If a system of co-operation as applied to finance can reach this class it will ultimately solve the question of the "manless" land.

In its resolutions the conference singled out the small farmer as the one for whom improvements should

We Have Abandoned Season Models



45 H. P. $1600 55 H. P. $2000

This 20th Anniversary "Jack Rabbit" Car Will Be Up-to-Date for Years to Come

Season styles may be all right in millinery and clothing. It's an extravagant and useless custom when applied to automobiles. "Jack Rabbit" Cars have been mechanically perfect since 1903—the finished work of 10 busy years on part of the Apperson Brothers.

No material change in mechanical design or construction has since been necessary. To force good cars out of date by bringing out new models, with changes that are unessential, is not fair to the owners. We have entirely stopped the practice. You make a permanent investment when you buy a "Jack Rabbit."

One Apperson "Jack Rabbit" Car is all you ever need buy

It will last you as long as you need a car. There are "Jack Rabbits" in use today 17, 18 and 19 years old. The average age of all our cars now in use is 8 years. No "Jack Rabbit" has ever worn out. You can safely invest a lifetime's savings in a "Jack Rabbit". It won't disappoint you. No such certainty in other cars. No one of them has 10 years of real proving—our cars have had 20 years proving.

$800 a Year Income Is Enough

to afford a "Jack Rabbit"—many a man with an income of only $800 a year owns an Apperson. With 17,000 cars on the road—some of them very old models—the average cost of mechanical upkeep to "Jack Rabbit" owners last year was only $5 per car. The average of other cars is $20 or over—and all these cars are comparatively new. Owners of recent "Jack Rabbit" models scarcely know the meaning of mechanical trouble.

As Beautiful as It Is Durable

Particular men and women both make the "Jack Rabbit" their choice—men, from a practical business standpoint; women, because it just suits their keen sense of refinement and is the easiest car for a woman to operate. "Jack Rabbits" have easy cushions, stylish bodies, beautiful finish and luxurious equipment.

9% Profit

is all we make on the Apperson. We have a smooth-running manufacturing organization—the result of 20 years' building. The Apperson Brothers own 97% of the stock. We have no interest on borrowed money to pay. Our overhead expense is extremely low. We can guarantee you this: No car can be built with Apperson quality to sell at Apperson prices on a margin greater than 9%. This is an important thing to consider.

Only a few thousand "Jack Rabbit" cars are built each year. Each car is an **individual** product built under the direct personal supervision of the Apperson Brothers.

TWENTIETH 1893 1913 ANNIVERSARY

I AM LIGHT IN WEIGHT — Apperson

I HAVE SPEED WHEN NECESSARY — Apperson

TWENTIETH 1893 1913 ANNIVERSARY

be made in establishing systems of credit.

Organized co-operation both for consumer and producer under proper supervision was endorsed more especially relating to efficient distribution and economical marketing in order to reduce expenses between producer and consumer.

The improvement and extension of the parcel post was recognized as a potent factor in reducing the cost and facilitating the distribution of farm products to consumers and its rapid extension by the government was urged.

Favorable action was taken in the endorsement of an international conference on marketing and farm credits to be held in San Francisco in 1915 under the auspices of the Panama Exposition.

By a unanimous vote of the conference the next meeting date was fixed as well as its location. It will convene in Chicago on the second Tuesday in April, 1914, and will be held under the auspices of the agricultural press of the United States.

CURRENT EVENTS.

(Continued from page 7.)

free list, a duty of 10 per cent is imposed against countries which levy a duty on American flour. This will exclude flour from Canada and many other countries. Raw wool will be made free at once, with a correspondingly heavy reduction in the tariff on all-wool goods. Sugar will be free of duty in 1916, the bill proposing an immediate 25 per cent reduction and a similar reduction each year until the entire duty had been removed, in 1916. The following articles are put on the free list: Meats, flour, bread, boots and shoes, lumber, coal, harness, saddlery, iron ore, milk and cream, potatoes, salt, swine, corn, cornmeal, cotton bagging, agricultural implements, leather, wood pulp, bibles, printing paper not worth more than two and a half cents per pound, typewriters, sewing machines, typesetting machines, cash registers, steel rails, fence wire, cotton ties, nails, hoop and band iron, fish, sulphur, soda, tanning materials, acetic and sulphuric acids, borax, lumber products, including broom handles, clapboards, hubs for wheels, posts, laths, pickets, staves, shingles. With a majority of 150 in the house the democrats will have but little difficulty in getting the bill through. With a small majority in the senate, however, there will be difficulty, particularly on the free sugar and free wool propositions. The two senators from Louisiana are leading the fight against free sugar, proposing as a compromise that sugar shall be free in 1916 if the president then believes that it is to the best interests of the cane growers as well as the consumers that the duty should be removed. The president, however, insists that ultimate removal of duty be decided upon now and hopes by progressive support to get the bill through the senate unamended.

SUFFRAGISTS both in the United States and in England are displaying unusual activity although the methods are diametrically opposite. The British suffragists are continuing their lawless policy, not only burning down buildings, but threatening human lives in their attempt to compel the government to give them the ballot. One of their leaders, Mrs. Pankhurst, has been sentenced to three years' imprisonment for advising the burning of one of the homes of David Lloyd George, chancellor of the exchequer. In the United States a large delegation of suffragists visited Washington on the opening day of congress, presenting a petition for a constitutional amendment which would grant women the suffrage in every state and territory, without waiting for legalizing acts in the separate commonwealths. The women were met in the senate by a number of the leading senators, prominent in the list being La Follette, of Wisconsin; Poindexter, of Washington, and Southerland, of Utah, who promised the women to vote for the desired amendment. Were the federal congress to take such action it would bring to pass the day of universal suffrage in this country much more quickly than it can be brought by the action of the individual states, although already nine states grant to women unrestricted suffrage, with five others now having the amendment pending before their voters and three others having the amendment adopted by one of the two branches of the legislature.

AN ALIEN land act that will be effective in prohibiting Japanese, and other foreigners not eligible to citizenship of the United States from holding or leasing real estate in California is about to be enacted by the legislature of that state. The action will precipitate another entanglement between this country and Japan over the vexatious racial problem. The federal government contends that the proposed action of the California legislature is antagonistic to the treaty existing between the two nations, which provides that the citizens of each shall have liberty to enter, travel and reside in the other and among other things to "own or lease and occupy houses and to lease land for residential and commercial purposes." The action of the legislature was brought about by the purchase of a large tract of land, many thousands of acres in extent, by a Japanese colony ostensibly for agricultural purposes, but possibly for the securing of a foothold on the coast from which expeditions might be launched, were a war ever to result between the two countries. The action of the legislature is akin to that taken by the San Francisco school board a few years ago, when it was attempted to prohibit Japanese children from attending the public schools. It was not until the federal government had intervened that the matter was amicably settled and the friendly relations between Japan and the United States maintained. War talk has subsided within recent months, but it is feared that the present legislative action will renew it.

THE fall of Adrianople, while it hastened the end of the Balkan-Turkish war, did not bring hostilities to a stop. The most important development since the Adrianople surrender has been the capture of Scutari by the Montenegrins, who heretofore had played a rather unimportant part in the operations. No sooner had the Montenegrins been thus successful than the demand was made by Austria that they surrender the territory thus secured, this demand being backed up by a formidable international fleet comprising warships of Austria-Hungary, Italy, France, Germany and Great Britain. Notwithstanding its small size the Montenegrins defied the powers, absolutely refusing to surrender the territory thus won. Montenegro is the smallest and least important of the Balkan states, yet at the same time the only one which has never been conquered by nor owed allegiance to any other country. It is a small, mountainous region, the people eking out a precarious livelihood by small garden patches on the mountain sides. Whether the little nation will be able to defy the power successfully and retain the territory which they won at such a cost remains to be seen.

THE republic of China has been officially recognized by the United States, which is the first world power thus to grant recognition to the new government. President Wilson was insistent that the young republic should be given early recognition and on the second day of congress took the necessary steps. He is hopeful that the other world powers will follow suit, although Great Britain has already announced that it does not propose to recognize the Chinese republic, for the time being at least. It will be recalled that the republic was formed following the overthrow of the former tyrannical monarchy. An American-educated celestial, Dr. Sun Yat-Sen, was chosen provisional president, but resigned in favor of Yuan Shi Kai when he found that the welfare of the young republic would be bettered by his abdication. A constitutional assembly somewhat similar to our congress has been provided to give the Chinese a form of government under which it is believed that the nation will progress much more rapidly than heretofore.

POPE PIUS X., head of the Roman Catholic Church, is reported seriously ill at the Vatican, his condition the first of the week being grave. The Pope is now in his sixty-eighth year and for ten years past has been head of the church having been elected pope in August, 1903. Prior to that time, for ten years he had been cardinal and patriarch of Venice, where his simplicity of life and sympathy with the poor had endeared him not only to the members of his own church, but to all who came in contact with him. Pope Pius succeeded the great prelate, Leo XIII., and has administered the affairs of his high office in a manner at once dignified and simple. One of the last public acts performed by the Pope was the reception accorded to Rear Admiral Peary, the American discoverer of the north pole.

IOWA WEATHER AND CROP BULLETIN.

The following climate and crop bulletin is issued by the Iowa Weather and Crop service from the central station at Des Moines, for the week ending April 13, 1913:

The past week was unseasonably cold and stormy. The average daily temperature was about 7 degrees below, and the average rainfall nearly two inches more than normal. Rain or snow fell almost continuously from Sunday night to Friday. Over the nothern half of the state the snowfall was heavy on the 10th; the amounts ranging from one inch in the southern part of that section to twenty inches in the northwestern counties. The sunshine was nil until Saturday. Freezing temperatures occurred on in or two mornings over a large part of the state, but the only damage resulting from the cold, wet weather was in delaying the necessary work of an already belated season, and in the small loss of young pigs and chickens. Unsheltered stock suffered during the storm. The freezing temperature did no damage to fruit as the buds are still dormant, and in good condition, as are also winter grains and grasses. Compared with the average of past years the season is now fully two weeks late, but the soil is saturated with moisture, and only warmth and sunshine are needed to quicken the growth of vegetation.

GEO. M. CHAPPEL,
Section Director.

The Winged Message

Noah's messenger was a dove. In Solomon's time, pigeons were trained to carry messages. Brutus used them at the siege of Modena. They served the Turks in their fights against the Crusaders. In mediæval wars they were more useful than ever before.

France had a carrier-pigeon mail service, with messages reduced by photography and read through a microscope.

Even today carrier pigeons are utilized as news-bearers in isolated parts of Europe.

In America, the land of the telephone, the carrier pigeon is bred only for racing. The winged word has taken the place of the winged messenger.

Pigeons may fly more than a mile a minute, but the telephone is as quick as speech itself.

The dove is the emblem of peace. The telephone is the instrument of peace. The telephone lines of the Bell System unite a hundred million people in one national family.

TO TRANSPLANT EARLY VEGETABLE PLANTS.

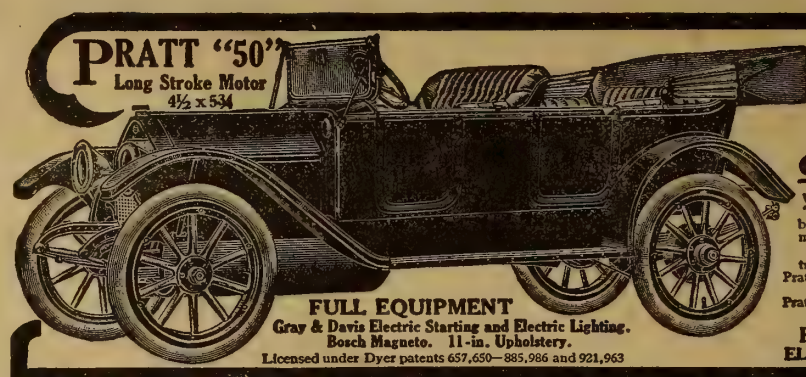
To the Editor of The Homestead:

To obtain the greatest amount of pleasure and profit from our gardens either for private or market use it is necessary that we use means to forward the maturity of the crops. This is done by the use of greenhouse, hotbed and cold frame in which to start the seeds and grow the plants and we also require some means by which the plants grown in these hotbeds and cold frames may be transplanted to the garden or field without unduly checking their growth or serious loss of plants. This is desirable even for those plants which admit of transplanting in the usual manner, but absolutely indispensable in transplanting melons, squash, cucumbers, etc. Clay flower pots can be used for this purpose, but are expensive, take up much room in a bed, are heavy and inconvenient to handle and easily broken. My experience with paper pots has not been satisfactory. They are tedious to put together and fill and will not endure the heat and moisture of a hotbed for three or four weeks.

For more than twenty years the market gardeners of this county have used a transplanting device that is the cheapest and most practical thing for the purpose intended I have ever seen. They are known as "dirt bands," and who first invented them I do not know, but they have been used locally for very many years and the use of them has been confined to this county which has become noted through the use of these "dirt bands," as one of the greatest early vegetable-producing sections of the country. Every experienced gardener knows that a melon, squash or cucumber plant is one of the most difficult of all plants to transplant; in fact, it cannot be moved in the ordinary way, as can cabbage or tomatoes, and amount to anything. They must be grown in some way so that they may be removed to the field without disturbing the roots to any extent.

Before moving to this part of Illinois, I used to start a few hills of early melons by planting the seed on small squares of inverted sod, or in small bags treated with linseed oil and filled with earth, neither of which was entirely satisfactory even for a few hills, and impractical on a large scale. With the use of these "dirt bands" many hundreds of acres of early melons and cucumbers are grown annually in this section, the seed being planted in hotbed and transplanted to the field by means of these "dirt bands" with so little check to the growth that a plant rarely dies or is stunted by the transplanting and without being wasted after being set in the field. They are very simple, merely strips of veneer cut from tough green wood, such as gum, and have four shallow grooves cut crosswise, so that they fold easily into a box four inches square and about the same in depth, the two ends lapping. They have no bottoms, which fact is really an advantage, as no jarring or disturbance of the roots is necessary in order to remove, as is the case with pots. The surface of the bed is made smooth and firm with the back of a spade, and the bands are folded and set in the frame until full. As each band is set in place, a slight pressure downwards with the hand forces the lower edge of the band into the soil a little, just sufficient to prevent the lapped ends spreading apart. When first used here it was the custom to fasten the ends together with small tacks, but this was found to be unnecessary, for after being in the frame some time the wood mildews and the ends will adhere without nailing. After the bands are in place they are filled nearly full with rich, mellow soil, the soil pressed down with the hand so that all vacant spaces will be filled, the seed planted and soil added until the bands are level full. When ready to transplant to the field, the bed should be well watered, so that the soil in the bands is pretty well soaked. The plants will endure removal better and will not require to be watered after setting out in the field unless the soil be very dry. The bands can be lifted from the bed by pushing the fingers under the band, but the quickest way and the one most generally used here, is to remove the end of the frame and use a spade for this purpose, pushing it under the band containing the plants, lift and set on a platform, wagon or sled. After hauling to the field the spade is again used to remove bands from wagon to the freshly prepared hill, the wooden band is slipped from around the ball of earth, moist soil is drawn around the plants and firmed down with a hoe. It is always best to remove the bands before drawing earth around the plants. The plants will generally live if the bands are left on, but by removing the bands the moist soil of the field can be brought into direct contact with the roots and the plants will grow off with scarcely a perceptible check to their growth. These dirt bands are not only indispensable in the growing of early melons, cucumbers and tomatoes on a large scale, but I also find them of the greatest value in the private garden. They can be used in starting early cabbage, Irish potatoes, corn, Lima beans, egg plant, cannas and other bedding plants; in fact, anything that requires transplanting. These bands hold enough soil to grow plants to a good size, tomatoes fifteen to eighteen inches, and melons or cucumbers until ready to vine. They are made by local box factories here owned by the truckers' associations and sell for a little over one dollar the thousand.

Martin Lewis Benson.



1913 Pratt Cars

Five Years—Every one successful as manufacturers of automobiles.

Forty Years—Every one successful as manufacturers of standard vehicles.

Get Catalogue showing photographic view of all models, and giving you the standards by which to value any car.

We have a business proposition for you. Our goal for 1913 is a "Pratt Car" in every locality. If there isn't one in your neighborhood—if there isn't a Pratt dealer near you it will be to your material advantage to write or wire and let us know.

Three Distinct Models—Pratt 50, 122-inch wheel base, electric starter and electric lighting system. Price $2,150.00.
Pratt 40, 120-in. wheel base, Presto-O-Starter and electric lighting system. Price $1,850.00.
Pratt 30, 114-in. wheel base, Prest-O-Starter and electric lighting system. Price $1,400.00.

ELKHART INDIANA

"WARM SEASON" GARDEN CROPS.

"Warm season" crops should not be planted in the open until danger from frost is past, which in this section of the state varies from May 1st to 15th. String beans and sweet corn may usually be planted safely the first week in May. Tomatoes, melons and cucumbers may be planted safely about May 15th. Egg plants and peppers cannot endure even a chill without some injury and should not be placed in the open before June 1st.

A number of the crops mentioned above have a short bearing season and must be planted more than once if a supply is to be had throughout the season. From three to four plantings of radish, lettuce and spinach should be made in the spring at intervals of about ten days. About three plantings of peas should be made at intervals of two weeks, using a variety like Alaska for the first, and something like Pride of the Market or American Wonder for the later plantings. Cabbage should be planted three times. Probably the best varieties are Early Jersey Wakefield for the early crop, Early Flat Dutch or Early Summer for the midsummer supply, and St. Louis Late Market, Flat Dutch or Drumhead for the late crop. String beans should be planted every two weeks until about August 1st. The round-podded sorts will be found better in quality than the flat-podded ones. For early sweet corn, Early Cory or Golden Bantam are very good, but at the same time they are planted, there should be a planting also of a variety like White Evergreen or Country Gentleman, which are later but of excellent quality and large in ear. The later plantings should be of the superior varieties only and should follow each other at intervals of two weeks until about July 10th. In this way sweet corn may usually be had continuously from early in July until October. A second planting of cucumbers is often made about June 15th for pickles. Most of the successive plantings mentioned may be made on ground that has already grown one crop.

While the selection of good varieties, planting at the proper time, and attention to successive crops are very important matters in a vegetable garden, they would amount to little without proper care of the crops during growth. To start at the beginning of this phase of the subject, something should be said about the preparation of a seed bed for vegetables, for the best cultivation that can be given any crop is a thorough preparation of the soil before planting. Before plowing, the ground should be disked, or cultivated, and harrowed thoroughly. Plowing should be deep, but not deep enough to turn up the subsoil. Following plowing, the disk and harrow should be used freely again. This treatment will thoroughly pulverize the soil to the full depth of plowing and compact it enough to enable the plant roots to take hold readily. It is a mistake to have the soil too loose at planting time. I have used this method of preparing a seed bed for a long time, both in commercial market gardening and in experimental work and have always obtained better results from it than from any other method. For crops not planted early in the season the ground should be disked or cultivated occasionally to conserve the soil moisture until planting time has arrived.

Cultivation of the growing plants should begin as soon as the plants are above ground. Sometimes the rows are raked or harrowed before the plants appear to aid them in penetrating the crust and also to kill weeds that have started. In a general way, the best course to follow in tillage is to cultivate fairly deep and close early in the season, and to gradually cultivate shallower and stay further away as the plants become larger. Cultivation should take place after every rain and at intervals of a week or ten days during dry weather. It is always well to continue tillage until the crops are well along toward maturity. Many vegetables are thus tided through periods of drouth and resume active growth again when favorable weather occurs.—[C. E. Durst in Ill. Hort. Report.

TURNIP GREENS.

To the Editor of The Homestead:

To my mind nothing better for spring greens can be grown than the old-fashioned seven-top turnip. Several years ago almost every farmer had a patch of these turnips sown for the next spring's supply of greens and many still follow this practice.

For sowing the turnip seed the ground should be rich and well prepared as for the summer turnip and if the seed is sown in July or August the turnip will be well rooted and of sufficient size to withstand the freezing and thawing of the ground the following winter. However if the seed is sown later in the season the patch may be covered lightly with straw to prevent freezing, raking off the straw the first sunny days in spring.

These greens grow very fast, the tender leaves putting out early in the spring almost before any other green thing can be seen. These should be clipped off every few days to prevent the turnip from seeding. When other green things come in a part of the turnip patch may be allowed to seed and in this way a new growth will appear every spring. Turnip greens are healthful yet they have a peculiar, bitter taste which is very pleasant to all lovers of greens and they are a valuable addition to the bill of fare in the early spring time when the winter provisions are getting scarce.

When turnip greens are not available at this season of the year there are many wild plants growing up in the fence corners and fields which are very palatable when cooked for greens. Among these are wild mustard, wild lettuce, a tender, early smooth plant called "lamb's quarter" and stump greens, so called from growing in bunches around old stumps. These resemble the Irish potato top and many call them wild potato greens. Many other varieties of wild greens may be found by the thrifty housewife in the early spring and any of these are made much more palatable with the addition of green onion tops chopped up and added when cooking. Wild greens of any kind should be parboiled at first, adding the seasoning after being placed in another vessel.

Mrs. S. E. McCoy.

To encourage the breeding of horses suitable for army purposes, the United States Department of Agriculture has purchased fourty-four stallions which will be stood in communities in which horses are being bred and which are not already well supplied with privately owned stallions. These horses will be available for public service on liberal terms. Well gaited and sound mares will be bred free of charge provided the government is given an option on their foals at $150 when three years of age. The owners of the mares will be allowed to cancel this option at any time or by the payment of the service fee, which is $25 for mature stallions.

INCREASE YOUR CROP
8 to 15 Bushels to Acre

The Brillion Clod Crusher will increase your yield from 8 to 15 bushels per acre. It crushes, pulverizes, rolls, levels and packs the soil. Makes a perfect seed bed which retains all the moisture a few inches below the surface. Free booklet tells all. Write today.

LEGAL DEPARTMENT.

(Continued from page 11.)

A bill was presented to A by C and A refused to pay the same, claiming that the constitution and by-laws of the company do not provide for directories. It is not denied that the company gave B authority to have the directories printed, nor that it had knowledge of their being printed. Can C recover from the company for the printing?

Answer.—C can sue the company, and recover a judgment for printing the directories ordered by B. The company cannot avoid liability by claiming that the constitution and by-laws do not provide for directories. The managers of the company should know better than to make such a claim.

FORECLOSURE SALE—RIGHTS OF PURCHASER.

Mr. J. ————, Kansas.—I recently bought some town property at a foreclosure sale. The owner was not living on it, but had rented it to a tenant, who is in possession. (1) Who is entitled to the rent? (2) Have I a right to require the tenant to vacate the premises? (3) The insurance on the property holds till 1915 and the man who foreclosed promised to turn the policy over to me, but now says there is a question as to who is entitled to it, and declines to do so. Am I entitled by law to the policy? (4) Who should pay taxes during the time allowed owner to redeem from the foreclosure sale? (5) In case I pay the taxes, will the same be refunded to me in case the owner redeems? (6) Can I take possession of the property and make improvements, or should I wait until time of redemption expires?

Answer.—(1) The owner of the property is entitled to hold possession thereof during the redemption period of eighteen months and to receive the rents during that time. (2) You have not until the period of redemption passes, and you receive a deed. (3) You are not entitled to the insurance policy. (4) The owner should pay taxes, but if you do so you would be entitled to have amount refunded in case of redemption. (6) You cannot take possession of the property till time of redemption has passed and you receive a deed.

COMMISSION FOR SALE OF FARM.

A Subscriber, Washington, Iowa.—A listed his farm with B, a real estate agent, for sale at $125 per acre, till the first of March, 1913. On February 8th B sold the farm for $125 per acre, the buyer to pay A $1,000 on March 1st and the balance on March 1, 1913, A to have the use of the farm for the year 1913, the buyer to get 6 per cent on the $1,000, and A agreed that if the buyer would throw off said 6 per cent, A would pipe the water from the house to the barn at his own expense. This was all agreed to on February 8th, which was Saturday, and the parties agreed to close the deal accordingly on the following Monday, but A did not appear. He came in on Tuesday and claimed there was a misunderstanding and that the buyer must pipe the water and fix up the house and fence the yard before he would make the sale. This was altogether a different proposition from the agreement on Saturday and so the buyer would not agree to it, but was willing to carry out the original agreement. B was to have a commission of $150. A now wants B to cut his commission to $50, and then says he will close the deal. Is B entitled to a commission, and if so, how much?

Answer.—B is entitled to his entire commission of $150, because he produced a purchaser for the farm on the terms given him by A and agreed with the purchaser as to the terms of sale, and then backed out. B can sue A for the commission, and recover it by law.

FORECLOSURE OF MORTGAGE—INTEREST.

Mr. C. S. E., Denver, Iowa.—A bought a piece of land from B, paying part cash and giving B a mortgage on the land for the balance of the price. B gave A a clear deed to the land. In order to get all cash B, with the consent of A, turned part of the mortgage over to a loan company; the interest on the loan was to be paid semi-annually. (1) In case A fails to pay the interest, can the loan company foreclose the mortgage before it is due? (2) B owes the former owner of the land the amount of the balance of the mortgage, and to secure him he gave a second mortgage, signed also by A, the interest thereon payable semi-annually. A has a renter on this land. If A should fail to pay the interest on the second mortgage could the holder attach A's share of the crops?

Answer.—(1) Not unless there is a clause in the mortgage providing for foreclosure before the debt is due—but most likely there is such a clause in the mortgage. (2) The holder could not attach A's share of the crop unless he would swear to some cause for such attachment, but he could sue A for the interest due and unpaid, and get judgment therefor, and have A's share of the crops taken on execution to satisfy such judgment.

Get the Facts About the New Sears-Roebuck "Quick Hitch" Harness

No. 10L3582 Price, with nickel buckles, solid nickel hook and terrets, with collar, $18.85

Hitching Up Made EASY

Women and boys, and busy men, will appreciate the many advantages of this new "Quick Hitch" Harness. With it anyone can hitch or unhitch **in less time than it now takes to place the shafts in the loops.** There is only **one** place on each side to hitch, instead of three or four.

All parts are securely united; no jerking. Each tug unites two complete circuits of harness, one for draft, and one to insure the movement of the vehicle as the horse moves, forward or backward. There are several other features of this new "Quick Hitch" Harness, fully described and illustrated in our new Harness Catalog, sent free.

A Brief Description

Bridle, ⅝-inch, overcheck or round side reins. Lines, ⅞-inch fronts, 1⅛ inch hand parts. Collar, full kip, buggy weight. Hame tugs, 1¼ inch. Traces, 1¼ inches wide. Gig saddle, harness leather skirts; flexible tree; 1-inch bearer; 1-inch wrap strap shaft holders from Quick Hitch buckle. Breeching, 1¾-inch harness leather body; ⅝-inch split hip straps; ⅞-inch side straps; ⅞ inch turnback; crupper to buckle on.

Harness Catalog Free.

Contains over 70 pages of bargains in fine harness, saddles, bridles, collars, whips, pads, trimmings, blankets, plush and fur robes, etc. Should be in the hands of every horse owner. Write postal NOW.

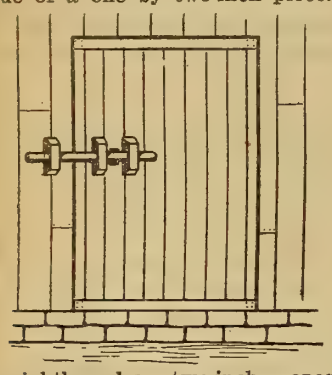
HINTS·SUGGESTIONS·DEVICES

WE extend a special invitation to our subscribers to assist us during the coming months in making this department better than ever. Please send along a description, accompanied by a drawing, of any handy device you may have around the farm, or something that is connected with the home.

HOMEMADE DOOR FASTENING.

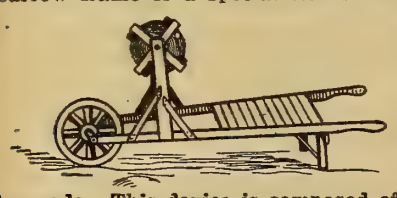
A secure fastening for stable or other outside doors may be constructed as follows: Take three two by twos shaped as shown in illustration, with a one by two inch cut in under side for slide to pass through. The slide is made of a one by two-inch piece. A



five-eighths by two-inch opening should be cut through the door just back of the slide and a four-inch pin driven through the slide, leaving a projection so that the door may be opened from either side

Loose Wire Roller.

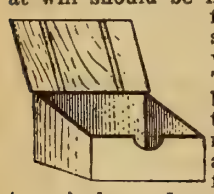
Every farmer has occasion to handle loose wire from time to time and a device for handling this will be found very convenient. One that is simple and easy to handle is shown in the accompanying illustration, which may be attached to the ordinary barrow frame or a special frame can



be made. This device is composed of an ordinary barbwire spool if one is at hand; if not, something similar will answer, which is placed on a support as shown herewith. Boards may be placed across the bottom of barrow to strengthen frame and to carry staples, hammer and stretchers. For convenience it is better to have the piece running through the hole in the spool fastened to it and holes bored in the top of the support, large enough to let it turn freely. Then attach a crank and one person can turn while the other pushes the barrow.

Salt Box.

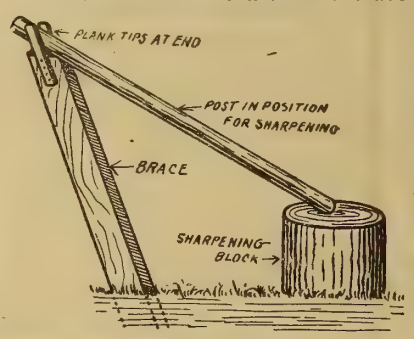
A salt box that keeps the salt dry and may be put up against the shed where the cattle can have access to it at will should be in use on all dairy farm. The one shown herewith is very easily made. The length of the box may be determined by the number of cattle and it should be fifteen inches wide, ten inches deep in front and fourteen inches deep in the rear, so that it will shed water and have enough drop to shut itself and stay shut when the wind blows. The lid must be a few inches wider than



the box. If a rounded hole is cut in edge of the center of the box, as shown, so that the cow can lick through the hole and taste the salt, she will lift the lid and get all the salt she wants.

Making a Post Sharpener.

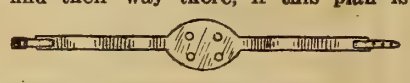
This is a great convenience when posts are sharpened by one man, says Mr. Clement White, a Kansas subscriber. The frame holds the post in position and all the maker has to do is to wield the ax. The brace



is a large post set solidly in the ground. It should be set in a leaning position. Nail pieces of planks on the end to make a receptacle for the posts which are to be sharpened to recline in. The amount of slant required will depend on the length of the posts.

Aiding Cleanliness at Milking Time.

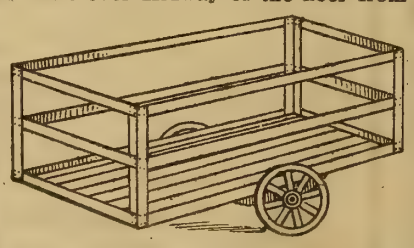
Soon the cows will begin to shed heavily, and it is impossible to keep all of the hairs from entering the milk during the milking hour. The following illustration, however, shows a neat little device for preventing most of the hairs from getting in the pail; indeed, there will be very few of them find their way there, if this plan is



adopted. The cut represents a strip of cloth long enough to pass around a cow's body and tie, the enlarged portion of it coming over the udder. The four holes are clipped in it to let the teats extend down so one can get hold of them in milking; yet the surrounding cloth prevents the myriad of loose hairs from dropping down into the milk pail; in fact, it just about bars dust, filth and everything else from entering except the milk. This strip could extend well up on the side of the cow, and be just that much better. If a buckle be attached to one end and a small strap to the other, it can be fastened and unfastened in much less time than by tying the ends of the strip of cloth.

A Portable Hog Chute.

Here is the handiest hog chute we ever have seen, and it can be arranged out of an ordinary chute, by taking a couple of cultivator or any other small wheels and putting them a little over midway of the floor from



the rear end. While any piece of strong timber will make a suitable axle for bearing up the chute, an axle from some old, discarded spring wagon or buggy will last practically a lifetime and prove much more satisfactory than a wood axle. When it is desired to move the chute, all that is necessary is to tilt the rear end and push the frame to the desired position, instead of the old, cumbersome method of tugging and dragging it around to where it was wanted. If the wheels are kept well greased or oiled, and if the chute is not too heavy, one can use it for moving heavy articles around that could not be carried by hand.

ROADS AND ROADS.

To the Editor of The Homestead:

A good deal is being said nowadays about roads. The reason is that roads lead somewhere, and if we are to reach any place we need roads. If we are to get there with ease and comfort we need good roads.

Good roads are easiest made with good material, but they may be made with common dirt if the right kind of road boss is in charge.

Some people can't think of good roads without macadam or cement or gravel even if there isn't any rock within a hundred miles nor gravel enough in a township to make a mile of road such as we dream of.

The only way to make roads in Iowa without bankrupting the farmers or the state is to make the best use of the material at hand. It isn't the cost of a thing that necessarily makes it serviceable. It is putting the right things in their proper relations to each other. Water and soil mixed together will never make a good road. Get rid of the water and the rest is easy.

Let us stop a bit and apply this good roads theory to life.

Education leads somewhere, therefore it ought to be the best to be had. Are we using the best of material at hand in education, or are we looking for far-off material at high cost and doubtful utility? Don't we lay a little too much stress on the smooth macadam of classical finish, and neglect to make use of the common material all

Sales may come, sales may go,
Everywhere are auctions now,
Of many kinds and many breeds,
But if you want Holsteins, Russell leads.

FOR SALE 320 acres fine prairie land in Wallace county, Kansas, $7.00 per acre, worth $10.00. No waste land. Address J. H. EDBERG, SHARON SPRINGS, KAN.

FOR SALE Farm Blue Earth and Nicollet Counties, Southern Minnesota corn section. A. H. Schroeder, Mankato, Minnesota

GO SOUTH SIR! **Buy Farm Land** AND PROSPER
at $10 an acre up along Southern Ry., M. & O. R. R. and Ga. So. and Fla. Ry. Values rapidly advancing. Plenty of rain—no blizzards. Growing cities demand more farm produce. Beef, poultry and dairying pay handsomely. Big profit in apples, truck, alfalfa, corn, cotton. Great industrial openings in all parts of the South. "Southern Field" magazine, land lists, and state booklets—Free. M.V. RICHARDS, L.&I. Agt., Room 50 Washington, D.C.

Stock, Tools and 124 Acres Must Go at Once
16 ACRES timber, balance cultivated, spring watered, eight-room house, plastered, papered and painted, two barns, 40x60, 30x40, granary, hen and hog house, plenty fruit, insurance on buildings $1,400, five miles to city. Included 1 pair horses, 10 cows, 2 mowers, wagons, buggies, harness, plow, cultivators, harrows, and everything ready for business. All goes for $3,800. Part cash. **Hall's Farm Agency, Owego, Tioga County, New York.**

FORT GEORGE, BRITISH COLUMBIA
IS the center of the heaviest railway construction campaign on the American continent. It is also the hub of an immense agricultural, timber and mineral belt. For information address Secretary, Board of Trade, Fort George, British Columbia.

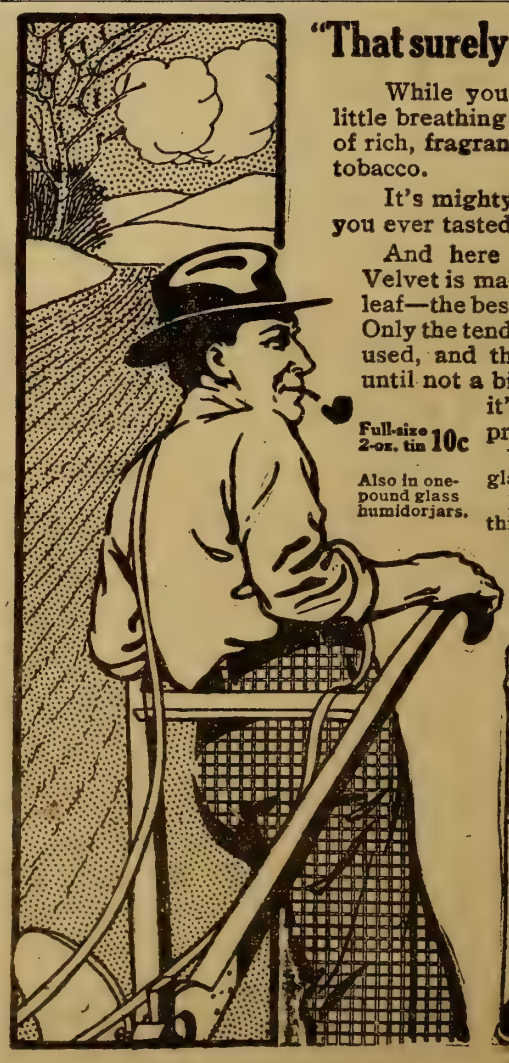
"That surely is restful tobacco"



While you are giving the team a little breathing spell, light up a pipeful of rich, fragrant Velvet—the smoothest tobacco.

It's mighty fine! The best tobacco you ever tasted.

And here is why it is so good. Velvet is made of the choicest Burley leaf—the best pipe tobacco that grows. Only the tender, ripe middle leaves are used, and these are aged and aged until not a bit of bite remains. Then it's packed in a moisture-proof tin that *keeps* it good.

Full-size 2-oz. tin 10c

Also in one-pound glass humidor jars.

Velvet is a smoke that will gladden the heart of any man.

Don't go another day without this splendid tobacco. You wan the best. Get Velvet.

Liggett & Myers Tobacco Co.

about us that is just as serviceable in the making of a man? Isn't education getting a little top heavy for plain people when the boy is urged to learn four languages that will in all probability be of no use to him in after life? Of what use is smattering of foreign tongues when a student cannot express his thoughts in good English? With the right kind of "boss" cannot the country be made a highway to success and happiness? The country school is in keeping with the country road through an undrained slough district.

Habits may not be classed with roads, but they lead somewhere. Bad habits are like roads that are full of gullies and quagmires. They continually impede progress. When we have a call to go somewhere they handicap us. We can't occupy the best places because our habits advertise our weaknesses. They are like a pole stuck in a mudhole with the significant legend "go round." A cigarette face and a telltale breath are in keeping with the slough-district road. Good habits are like the road that is always known to be open and passable. The traveler doesn't have to take a pry along to lift himself out of a mudhole.

Environment has a good deal to do with the ability to get somewhere. A road across a bottom is liable to overflow and one in a hilly country is sometimes so gullied we can't use it. Not every boy is strong enough to break away from bad company. Better those associates and influences that lead away from the pitfalls, the sloughs of base desires and low ideals. Good surroundings are worth something in a moral and intellectual sense as well as in a road sense. A man cannot choose where and how he is to be born, but he may choose the people he wants for friends.

Courtesy is a good road to travel. It always leads to the right place. Courtesy is only kindness made agreeable. It requires no tax to keep it in repair, and the more it is used the better it becomes. It is the oil that finishes the way of life after industry and character have laid the proper foundations. Eugene Secor.

Growing Alfalfa in the Corn Belt

By A. A. Burger.

ALFALFA is slowly but surely winning its way into the corn belt. Significant of this is the increasing demand for information regarding its growth and the methods of its culture. Its feeding value and its fertility value are already well known. It will suffice, therefore, to present the methods of culture.

Alfalfa is a new plant in the corn belt. And as with every plant the nature and requirements of which are not well known, we will make failures and can expect them in the future, but by using the best knowledge which experience and practice has taught the number of these failures can be reduced. Alfalfa is grown in every state surrounding the corn belt; it may be seen growing on hilly clay lands, on rich, black loams and on blowing sands. Why can it not be grown on every farm?

There are some requirements that must be met before alfalfa will be a success. One of these is a well drained soil. The field should either have thorough natural drainage or be well tiled. It should not be subject to overflow nor should the water level come closer than three feet to the surface. In the former case the plants are killed for want of air, and in the latter root development is checked. In selecting the plat of ground the first essential is good drainage. To sow alfalfa on poorly drained soil is to invite failure and is a loss of time and money.

Within the last few years we have learned that alfalfa will not succeed on sour land. Seeded on such lands the plants may do well while young but early the next spring, and in many cases even the same fall, they begin to turn yellow and die. Many farmers have experienced these results. In many cases no doubt these failures could have been avoided by the use of agricultural lime. Lime is cheap, comparatively easy to obtain and where properly used will not injure the soil. Burned lime is ordinarily applied at the rate of one ton per acre. If raw ground stone is used two tons should be applied. Those who intend to sow alfalfa and do not know whether their soils are acid can well afford to take the time to find out. And those who already know their soils are acid can choose between failure and the use of lime in some form.

But it must not be inferred that the use of lime alone will insure success. Lime improves the physical condition of the soil, it sets free plant food which is necessary to the growing plant, but its important function in the growth of leguminous plants is that of making possible the growth of bacteria on their roots. For the successful growth of any plant belonging to this family, the particular kind of bacteria which they require must be present. Many soils, in fact most soils do not contain the bacteria necessary for the growth of alfalfa. Such soils, therefore, should be inoculated. Satisfactory results have been secured both by the use of artificial cultures and of soil. The latter can be obtained from successful alfalfa fields, or since the bacteria of alfalfa and sweet clover are similar, from the roadsides where sweet clover may be found growing. The soil is generally applied at the time of seeding and at the rate of about 300 pounds per acre.

It is generally understood that alfalfa requires manure, and there is a common opinion in some localities, that it will correct acidity and also serve to inoculate the soil. Unquestionably manure is beneficial even on acid soils, but the acidity of such soils can be corrected only by the use of lime. As regards inoculation, manure may carry the proper bacteria when produced from alfalfa or sweet clover roughage, but otherwise it could not be considered as an inoculating material. Manuring, however, should not be discouraged. Its use is beneficial on all soils especially when applied early in the season and thoroughly incorporated with the soil. Remember that inoculation and manure are both necessary.

In regard to the time of seeding several methods have been followed. Which is the best we are not yet prepared to answer definitely. The most of the seeding has been done in the late summer and the results so far indicate with the most successful results. The surest way of securing a stand would be to plow deep in the spring apply both manure and lime and keep the soil well cultivated by the frequent use of the disk. In Iowa the seed should be sown some time during the early part of August. Drilling is preferred to broadcasting, but where the latter method is followed half the seed should be sown in each direction. The seed is usually sown at the rate of twenty pounds per acre.

The method above outlined involves the loss of the land for the season. Many therefore prefer to grow some early crop such as potatoes or oats. In an ordinary season with plenty of rainfall the method of growing some early crop may prove satisfactory, but in case of prolonged dry periods there may not be sufficient moisture present to make it possible to work the land in shape. Alfalfa may also be sown in the spring with a nurse crop. More frequently, however, the seed is sown alone. The principal objection to this practice is that the young plants come in competition with the weeds. Late summer seeding avoids the weeds, but in this state it is well to bear in mind that seed sown later than the middle of August may not be able to withstand the winter. This has been the cause of the destruction of many fields during the past winter.

Too much emphasis cannot be placed on the preparation of the seed bed. Suffice it to say that the soil cannot be too well prepared. We should remember, however, that while alfalfa requires a well-pulverized seed bed the subsurface should be rather firm. This condition may be secured by the use of the roller and the harrow.

In obtaining seed the best, of course, is none too good. Oftentimes alfalfa seed is adulterated and many times contains objectionable weed seeds. As with any other crop, the best seed is generally the cheapest and it should be purchased only subject to inspection or where the purity and germination are known to be good.

The successful alfalfa grower will give heed to the details of its culture. He will avoid all risk. There are a few precautions which should not be overlooked and they are here restated that they may be more fully understood.

1. Alfalfa will not grow on wet or undrained land.
2. Alfalfa should not be sown on acid or sour land unless some form of lime has been applied.
3. Alfalfa land should be well manured.
4. Alfalfa fields to be most successful should be inoculated.
5. Alfalfa requires a carefully prepared seed bed.
6. Alfalfa should not be sown late in the fall and only good seed should be used.

Buy your Tires as you would a Binder

Your tires are as important an investment as the purchase of a binder, a tractor, or any other big piece of farm machinery.

One tire is a relatively small matter, but in the aggregate, year after year, your total tire investment rivals in size the investment in your best piece of farm machinery.

You would not think of buying a binder or a tractor without satisfying yourself on these three points—the size and standing of the company making it, the reputation it had among farm machinery experts and your friends who had used it, and the amount of extra profit you could make by using it.

There is every reason why you should apply these same tests to the purchase of your tires. Measured according to either or all of these tests

UNITED STATES TIRES

are unquestionably

America's Predominant Tires

The United States Tire Company is the largest tire-making organization in existence. Four-fifths of the best dealers in the country are now handling its product, which is clearly indicative of the *standard* it has among men *who know.*

The best men and the best methods of four of the finest tire-making plants in the world unite in making this one line of tires.

These co-operative methods of tire building have accomplished the largest *increase* in tire mileage and *decrease* in tire expense ever known in the history of tire making.

Today United States Tires yield an average mileage from 25 to 50 per cent higher than was given by any make of tires previous to the organization of the United States Tire Company two years ago.

United States Tires offer the *safest and most profitable tire investment* that any motorist can possibly make.

UNITED STATES TIRE COMPANY
NEW YORK

FINANCING THE FARMER.

Usually a solvent farmer has no trouble in buying whatever he wants on credit, says the Saturday Evening Post. Usually, too, he has no accurate idea as to what the credit he gets actually costs him. It has long been the rule, for example, to sell farm machinery on six months' to three years' time. So much farmers' paper of this sort is constantly outstanding that some ingenious Wall Street persons have formed a company for the purpose of issuing debentures against it, selling the debentures to investors on a basis netting about 6 per cent interest. The farmer, of course, pays that 6 per cent, and then something for the guaranty, something for costs of collection, something for bad debts.

The question is, How much altogether does he pay for the credit? How much—if any—better could he do if he financed himself and bought strictly for cash? So with the groceries, dry goods and professional services he habitually gets on credit. What does the credit really cost him?

Unquestionably buying on credit is a bad habit. It always involves counting unhatched chickens. It generally precludes the closest bargaining. There is no market in which the cash purchaser, taking it by and large, does not have the advantage.

Solvent farmers need not ask anybody to finance them. By co-operating they can finance themselves. If their notes are good for so many hundred thousand dollars' worth of implements, they are equally good for the same number of dollars in cash. We have no doubt that a farming community which financed itself and bought for cash would be considerably ahead at the end of five years.

The Question of Farm Credits.

THE question of agricultural credits has occupied a large place in the public mind during the past year. Farmers, bankers, editors, legislators and politicians have been discussing it. It occupied a large part in the program of the conference of governors last month at Richmond and was the occasion of a special conference of the governors with President Taft at the White House. In the state agricultural meetings in almost every state it is being discussed this winter. What is the occasion of this unusual interest in this subject and why has it come so prominently before the public at this time? Certainly farmers have never been more prosperous than they are at present. Why then has the question of rural credit come to the foreground. I believe it is because of their prosperity that the farmers are appreciating their lack of an adequate system of financing their enterprises. It is the prosperous business that needs capital and it is the prosperous farmer who can afford to borrow capital to make permanent improvements and to expand his business and by expanding his business I do not mean increasing the size of his farm. Our only idea of a farmer increasing his business in the past has been for him to buy more land. That is not what we need, but it is to increase our income on the land we have. During the last census decade, 1899-1909, farm lands in the United State increased 109 per cent in value and farm crops 80 per cent. These facts spell prosperity and a new outlook to American agriculture. But it takes more capital to run a farming business under the changed conditions and it costs more to operate a farm now than it did in the past. But where is this capital to be secured, and on what conditions may it be borrowed? If it is a short-time loan and your financial standing is good we have a splendid system of country banks through which you will be able to make your loan at a fairly reasonable rate of interest. If it is a long-time loan to make some permanent improvement, such as building a barn, or silo, draining a field or clearing and improving land, the facilities are not so good. If it is a loan secured by mortgage on your farm it will probably have to be made from an insurance company, a private individual or a private or state bank, and will be for three or five years at longest. If the loan is made through an agent there will be a commission of 2 to 5 per cent to pay in addition to the interest, and when the loan expires it will have to be renewed, and probably a renewal of commission as well.

We are inclined to scoff at the agriculture of Europe, and to boast of American agriculture as the foremost in the world. But the facts of the matter are that the European nations have us so far beaten in their methods of financing their agriculture that we are just about a hundred years behind the times. The European farmers not only get their loans at lower rates of interest than we do, but they get them for long periods and pay them back in small annual payments. The rates of interest paid are from 4 to 4½ per cent, and the loans run from thirty to fifty years, during which time they cannot be called in or the interest rates raised.

I speak of the German rural credit system particularly because I had an opportunity to study and observe it last year. The farmers of central Germany this past year were making their loans and paying 5 per cent. Of this 4 per cent applied as interest on the principal, ¼ per cent to cover the expense of the association through which the loan is made, and ¾ per cent applies as payment on the principal. By paying 5 per cent for between forty and forty-five years the entire loan will be paid. Compare this with our farm loans that bear 5 to 6 per cent interest and in addition, commission to some agent for getting the loan for us; that have to be renewed at least once in five years and with no provision of paying them back gradually by annual payments with the interest. Farther west the rates of interest increase to 7, 8 and even 10 per cent in the newer sections. This difference in rates of interest is not because money is more plentiful in the European countries than it is in America, because it is not, and interest rates in general are not so low in Germany as in America if you take the price at which government bonds sell in the respective countries as your basis of comparison.

The favorable terms on which farmers are able to secure their capital is the direct result of rural credit systems that have been organized in the different countries. Strictly speaking there is no European rural credit system, because each country has its own system more or less peculiar to itself. In France, for example, agricultural credit is furnished largely by loans made by the government and handled through privately organized stock companies. In Germany, on the other hand, the rural credit system is based on the co-operation of borrowers and not on government subsidy.

The best illustration of the workings of the German system is seen in the co-operative land mortgages associations (landschaften). These organizations show what can be accomplished by making farm mortgages negotiable and by borrowers organizing and making their loans as companies rather than as individuals. The associations are made up exclusively of farm owners who have loans on their farms. To be a member a man must own farm land and have a loan on it. In making a loan a farmer joins such an association and is then entitled to borrow to two-thirds the assessed value of his farm by giving first mortgage. The association, however, does not have the money to make the loan and does not give the farmer money in exchange for his mortgage, but bonds of the association of equal amount to the mortgage. These he may sell or have sold through the association and receive the proceeds. The association simply takes the individual mortgage of the farmer and issues in place of it bonds that are secured by all of the property and all of the mortgages held by the association. They thus substitute collective credit for individual credit and that is all there is to it. The individual mortgage of Herr Schulze is not negotiable because he is not known outside of his local community, but when the Saxony Land Mortgage Association gives its bonds for $5,000 in exchange for his mortgage for the same amount his security instantly becomes negotiable and sells practically as well as a government bond. Why? Because the Saxony Land Mortgage Association is known to be absolutely sound financially, to never have defaulted a bond or failed to pay interest on them when due. During 1912, in fact, the bonds of the co-operative land mortgage associations did not sell over one-half to three-fourths per cent below the German government bonds.

Every loan made through a co-operative land mortgage association must be paid back on the amortization principle and with the first and every payment of interest the farmer makes a small payment which applies on the principal, but he also has the option of paying off his loan all or in part at any time. But after his loan is once made he knows that it cannot be called in, will not have to be renewed and that the interest rate cannot be raised so long as he keeps up his annual payments. Consequently he can go ahead and make permanent improvements from which his returns will come in slowly. The popularity of this system is shown by the fact that the German farmers have nearly $1,000,000,000 of farm loans made through these institutions. There is nothing new or untried about these co-operative land mortgage associations. They are the oldest rural credit institutions in Europe; the first one was established 143 years ago. During all of this time there has never been a bond defaulted, or a single loss through them, and at times their bonds have sold higher than German government bonds.

In all forms of co-operative business the German farmers are far ahead of us, and at the present time there are over 24,000 co-operative agricultural associations in Germany. But, notwithstanding their familiarity with the principles of co-operation and their long experience with the co-operative land mortgage association, their rural credit is not all organized on a co-operative basis. Private stock companies are organized and chartered to do a land mortgage business. They issue bonds in exchange for mortgages, just as the co-operative associations, and they make loans for long periods amortized by annual payments with the interest. The rates of interest at which their loans are made compare favorably with the co-operative associations with which they must compete for business. Their business, however, is confined largely to real estate and of the $2,500,000,000 of outstanding loans that they now have, only about 2 per cent of them have been made on farm real estate. The co-operative land mortgage associations (landschaften), on the other hand, loan exclusively on farm real estate.

For American conditions, unused as we are to doing co-operative business, I am inclined to think that the private stock company is more likely to succeed as a rural credit institution than the purely co-operative association. There is no question that the co-operative association is ideal and it is simply a question whether we can attain our ideal. Recently there has been organized at Joliet, Ill., a private stock company land mortgage association under the Illinois laws to make long-time loans to farmers on the amortization plan. They make loans on Illinois farm land for thirty years, and by paying 7 per cent

or the face of the loan semi-annually the loan will be paid off in thirty years. On a loan of $1,000, for example, a farmer pays $35 every six months, or $70 per year, and by paying at this rate for thirty years he pays off his loan and has the privilege of paying it in part or all of it at any time. Such a system avoids the necessity of any renewals and gives all of the advantages of the German system except that the interest rates are not quite so low.

The German farmers have been no less successful in providing personal credit for themselves than they have real credit. By a most elaborate and extensive system of co-operative rural banks numbering now over 16,000, they have developed a system that provides the German farmer short-time loans for working capital at 4½ to 5 per cent interest. These rural banks are co-operative savings and loan institutions that receive the farmers' and rural populations' saving deposits for which they are paid interest usually about 1 per cent less than the current rates. They are small institutions, averaging only about 100 members and doing business in small areas. They are organized into central banks which serve the individual farmers; that is, the central banks receive the deposit and make loans to the rural banks. There are two fundamental things concerning these banks that should be emphasized. 1. They keep the money in circulation in the rural districts and prevent it concentrating in the large cities. 2. They are not operated to earn profits for stockholders, but to provide working capital to the members at the lowest rate of interest possible. There is one feature of them, however, that I do not believe would be regarded with favor in this country. For the most part they are organized on an unlimited liability basis. That is, each member is liable for all the property he has to meet the debt of the bank of which he is a member. In the more prosperous agricultural sections this principle is being abandoned and the rural banks are being organized on the limited liability basis. The tendency is not, as some authorities assert, toward the unlimited liability basis in the rural banks, but rather the opposite.

We need in this country not only a "back-to-the-land movement of the people," but a "back-to-the-people movement of our farm lands." The increase in farm tenancy in many of our best agricultural sections amounting in many cases to over 50 per cent has resulted in demoralizing social, educational and spiritual conditions. To solve this situation we need a rural credit system that will provide credit for the strong, industrious, honest, ambitious farmer to get started in farming. How is the young farmer in Ohio at the present, who lacks capital, but has every other essential for success to get started? Where can he invest his money to get over 4 per cent interest, and where can he borrow at less than 6 per cent, if at all? It has been said of the rural credit banks of Germany that they have capitalized the farmer's character, industry and health. That is, he is loaned capital for specific purposes even though he does not have any property to give as security, if he is known to be honest, industrious and capable. The same thing is done in this country frequently by individuals, but we have not regularly organized institutions for doing it. To my mind the most difficult feature of a rural credit system for American conditions is the furnishing of personal credit to the "landless man." It is also one of the most important because there are thousands of vigorous, sturdy young farmers without land and without capital whom we need in our agriculture. Men of the same class as those to whom the government gave homesteads a generation ago. Our public lands are gone and the outlook is not bright for the young farmer without capital to become established.

The agitation for a better rural credit system in America is no passing demand that will be superseded by something else next year. It is fundamental to a permanent system of agriculture. With an investment of over $40,000,000,000 in agriculture and an indebtedness of over $6,000,000,000, American farmers are beginning to awaken to the fact that they are paying from $100,000,000 to $125,000,000 more interest each year than would be necessary if they had their credit system properly organized. We talk about economy in marketing and distributing farm products. But where is there the opportunity to make the saving that there is in marketing farm securities? There is no better security than arable farm lands, but until the mortgages are converted into negotiable securities the farmer borrowing on his farm mortgage is handicapped just as much as a farmer a hundred miles from a shipping point is, in marketing his wheat crop. He is too far from the market. It costs too much to get into the channels of trade.

While it is not likely that any European rural credit system will exactly fit American conditions, yet they have accomplished certain things that must be accomplished by any successful system that we may adopt.

First, they provide for long-time loans that do not need to be renewed, but may be paid at any time before the last payment is due.

Second, they provide for the payment of the loans on the amortization plan.

Third, they make farm mortgage securities as negotiable as government or municipal bonds.

Fourth, they secure as low rates of interest as are secured by any industrial corporation or company.

And finally, they are under strict government supervision and are operated by and for the farmers and not for or by any other class.—[Address of Prof. H. C. Price before Ohio Board of Agriculture.

Get the New Price on Fuller & Johnson Farm Pump Engine!

It Will Surprise You

We've made a startling reduction in the price of the celebrated Fuller & Johnson Farm Pump Engine—a price that puts this amazing little wonder-worker within the reach of every progressive cattle-raiser and farmer.

Now, no man who owns five head of stock or more need rely on undependable windmills. No user of light machinery on the farm will care to be without the great little Farm Pump Engine. Our great volume of business now makes this surprisingly low price possible. Find out about it today!

270 to 2450 Gallons Per Hour

Will pump the deepest wells. Keeps right on the job when windmills fail. Runs separator, feed grinder, washing machine, churn, etc.

Sprinkles lawns, washes windows, porches, buggies, automobiles. Great value for fire protection.

Fits any pump. No belts, no anchor posts, no arms, no special platform needed. Ready to run when you get it. No extras necessary, everything furnished complete.

The Fuller & Johnson Farm Pump Engine saves work for everybody on the farm. Costs a mere nothing to run. Clip the coupon or write on a postal today for full details and New Reduced Price!

News of the Sale Ring

The Walter Roberts Sale.

The dispersion sale of the Walter Roberts herd of Aberdeen Angus cattle held at Atlantic, Iowa, on April 8th, proved a splendid drawing card, and the attendance was exceptionally good from all parts of the country. The cattle were in good breeding condition and many of the females had calves at foot. This sale proved conclusively that the demand for Angus cattle is growing stronger and this sale and others held recently have brought out more new buyers than have been seen at the sales in many years. The top of the sale was the two-year-old bull, Botna Valley Blackcap and he was purchased by Godfrey Dreher, Audubon, Iowa, at $500. The old herd bull, Deceiver, went to Frank Bowers, Walnut, Iowa, at $305 and he was a bargain at that price. The top of the females was Erica 12th of Lincoln Park, with a bull calf at foot by Deceiver and she went to G. C. Williams, Hepburn, Iowa, at $330. Forty-nine females averaged $183.37 and eleven bulls made an average of $184.54. The average on everything was $183.58 and it was a splendid sale. Cols. Igo and Kraschel cried the sale and both did excellent work. Below we list those selling for $100 and above:

FEMALES.

Blackcap Echo, calved October, 1907; Caldwell & Son, Burlington, Junction, Mo. $285

Shallenberger's Short-horn Sale.

One of the worst snow storms of the season and one of the worst ever recorded in Nebraska for the time of year was encountered on April 10th, the day for the sale of Short-horn cattle made by A. C. Shallenberger, Alma, Neb. The sale was held however, and a very satisfactory average was made, considering the very stormy weather and the fact that the rain which fell for two preceding the snow storm kept many away that had planned on coming in automobiles. This manner of travel is very popular in central Nebraska and is a big factor in the pure-bred auction in the territory mentioned. The cattle were presented in only fair condition and more condition would probably result in higher prices. The top price of the sale was $400 at which price R. C. Firme & Sons, Hastings, Neb., secured the very choice young bull, Watchword, a son of Imp. Scottish Sentinel and out of Imp. Maude 44th. This is a beautiful young bull, of excellent pedigree and goes to one of the fine herds of the state. E. W. Cossgrove & Son, Farnam, Neb., were among the top buyers of the females, as well as among the heaviest buyers. In this auction Mr. Shallenberger has distributed a lot of good cattle and at such prices that they must be good investments for the purchasers. Col. F. M. Woods did the selling and added still another to his long list of successful sales. The report follows:

COWS.

Maud 55th, calved January 1911 and c. c.; Byron Parrish, Alma, Neb.	$250

32 females	$4,915; average	$153.25
9 bulls	2,085; average	231.25
41 head	7,000; average	170.75

One point worthy of mention in regard to the 1912 apple crop was the unusually large size of the fruit of certain varieties. Twenty-ounce apples that exceeded the weight which gave the variety its name were not uncommon, and many Baldwins were so overgrown that it would puzzle an expert to classify them if he did not know that they grew on Baldwin trees. The latter part of the season was highly favorable to the development of late winter fruit. Nova Scotia apple growers have organized a co-operative fruit packing and marketing association, which will handle upward of 600,000 barrels of the past year's crop. It is now up to the orchardists in the eastern part of the United States to fall in line and do their share toward the development of a systematic arrangement for disposing of the enormous apple crops to be marketed when the young orchards come into bearing.

Slashing Offer on Harrows and Harrow Carts

I am making the most startling, the most amazing price slashing offer ever made on harrows and harrow carts. Write me at once—or order right direct from the amazingly low prices given here—act quick. Sold on 30 days' approval test. Backed by ***$25,000 bond.***

Get My Big FREE Book Now

Galloway's Prices Are Lower Than Dealers Pay in Car Load Lots

Yes, Sir,—I will sell you a genuine Galloway Guaranteed New All Steel High Wheel Harrow Cart for $5.50, and a Galloway Guaranteed All Steel Flexible Lever Harrow as low as $11.00—both for $16.25—less than your dealer would have to pay for inferior articles in car load lots! Last year we sold thousands of these carts and harrows. This year we are going to sell three where we sold one before. The price will do it. Here is your chance—act quick.

My Particular Hobby

This Galloway Harrow Cart is a pet of mine. I made my start with Harrow Carts—sold 4,400 the first year, 7,200 the second year and have been selling thousands every year since at prices that smashed all competition.

My All Steel Harrow Cart is different—original—with special patented features that put it in a class by itself. It will successfully follow any harrow without interferring with levers and sections, and at the same time will turn perfectly without changing position of driver in seat. It is closely connected to the harrow and has high spring seat that raises operator up out of the dust. Heavy steel angles; axles have oscillating arms made of solid steel bars; dust proof boxes.

Prices F. O. B. Waterloo or Kansas City

N1993—New High Wheel Harrow Cart, 30-in. wheels; dust proof boxes; weight, 80 lbs.; price **$5.50**

N1994—New High Wheel Harrow Cart, 38-in. wheels; dust proof boxes; weight, 85 lbs.; price..... **$6.25**

You can't afford to walk behind a harrow, when you consider the saving in time and shoe leather my Harrow Cart makes you. It means at least one hour a day besides the greatest saving in labor for the money ever offered a farmer.

World's Greatest Harrow

Since developing my Harrow Cart, I have perfected Galloway's New All Steel Flexible Harrow—the only harrow made that can be adjusted with levers. For years when I traveled on the road I sold a wooden flexible harrow to dealers and it was a good one, but it didn't have any levers. It was not adjustable. It was wooden, which naturally in time, exposed to the weather and elements, would soon give out and warp out of place. I sold these harrows at wholesale to dealers at $1.00 per foot. I am now selling my new Galloway All Steel Flexible Harrow direct to the farmer for less money than they used to pay for the old style wooden harrows.

Some Special Features

On account of its flexibility, the teeth of this harrow go down into the hollow places, follow close to the ground, go into all the low places and over the ridges without skipping a foot of space. Each section and each bar is entirely independent of the other; no side motion, no danger of one section riding on the other. With the teeth slanting back, this harrow is ready for corn stalk ground, smoothing or weeding grain ground, etc. When teeth are straight up it is ready for pulverizing fall plowing, and on account of the oscillating movement the teeth dig and tear up the ground similar to a cultivator.

Harrow Prices F.O.B. Waterloo and Kansas City

N5065—2 Section Harrow (80 teeth); Width, 11 cut ft.; Weight, 198 lbs.; price..... **$11.00**

N5066—3 Section Harrow (120 teeth); Width, 16½ cut ft.; Weight, 305 lbs.; price..... **$16.50**

N5067—4 Section Harrow (160 teeth); Width, 22 cut ft.; Weight, 432 lbs.; price..... **$22.00**

Special Combination Prices

If you order one of these New Harrow Carts and New All Steel Flexible Lever Harrows together, we will make you the following special combination prices F. O. B. Waterloo factory or Kansas City.

N1868—30-in. Cart and 2-section Harrow.... **$16.25**
N1869—30-in. Cart and 3-section Harrow.... **21.60**
N1870—30-in. Cart and 4-section Harrow.... **26.95**
N1878—38-in. Cart and 2-section Harrow.... **16.75**
N1879—38-in. Cart and 3-section Harrow.... **22.00**
N1880—38-in. Cart and 4-section Harrow.... **27.45**

I would like to see one of these High Wheel Harrow Carts and All Steel Flexible Lever Harrows on every farm in this country. You can safely order direct from this announcement, or if you prefer I will send you

POULTRY

THIS department is edited by a competent poultryman, who will be pleased to answer questions concerning diseases, poultry management, etc., when they can be answered through the department. Questions will not, however, as a rule, be answered by mail, and stamps need not, therefore, be inclosed with inquiries. Address all letters relating to poultry topics to this office.

THE MOISTURE QUESTION IN INCUBATORS.

To the Editor of The Homestead:

Perhaps there is not a single question connected with incubators and incubation that has called forth as much discussion as the subject of moisture. It is not the purpose of this article to set down the views offered as the only correct solution of the question, but merely to offer a few ideas gathered from practical experience. If there are any that disagree, we would be pleased to hear from them and discuss their views in these columns.

The inventors and students of artificial incubation have been led to believe that moisture was required during the period of incubation, by observing the hen. In the wild state, the hen on leaving the nest in the early morning naturally came in contact with the wet grass. When she returned to the nest, the moisture was unconsciously applied to the eggs.

Still another observation showed that the hen laid her clutch of eggs on the ground, which always afforded a generous supply of moisture at the season of the year when the eggs were hatched. This also demonstrated that the under side of the eggs was several degrees colder than the upper side.

These observations on the question of moisture have caused a great deal of discussion. Leading authorities have taken sides on either side of the question and still it seems to be unsettled.

We have found, other conditions being equal, that where moisture is applied the best results are obtained. For some time it has been thought that the moisture should be applied during the last week of the incubating period, but this is a mistaken idea.

The object of those who advocate the application of moisture during the third week is to make the chick "sweat," thereby helping it to liberate itself from the shell. This may be true, but the disadvantages are of far too great importance to warrant its use.

The greatest disadvantage is the great strain on the chick. Everyone acquainted with incubators will tell you that the evaporation or shrinkage of the contents of the egg is greater in the third week than during any other time. Such being the case, the tendency of the application of moisture at that time would be to increase the evaporation rather than decrease it.

It has been our experience in every case where the moisture was applied the third week that the chicks hatched were smaller and weaker in vitality than where it was applied during the first two weeks or not at all.

It is our belief (we may be wrong) that if it is necessary to apply moisture at all, it should be applied during the first week rather than at any other time during the incubating period. Why? you ask.

In the first place, we must determine the importance of the first week in incubation. It is perfectly safe to say, other conditions being equal, that everything is determined by the first week and the methods used then.

The first week is by far the greatest and most important of the whole hatching period. You must keep the temperature down, for the growing life germs in the eggs is very delicate and too much heat is apt to burst a blood vessel and kill the germ. On the other hand, you must be very careful to prevent evaporation of the contents of the egg. How prevented? By a liberal supply of moisture the first week you will prevent the above-mentioned evils. But, you say, if moisture in the third week will hasten evaporation why will it not also hasten it the first week? The answer is because the egg ordinarily will evaporate very little the first week. That being the case the application of moisture will have a tendency to conserve the contents of the egg rather than hasten the evaporation, but, if the contents were rapidly evaporating, moisture would only hasten it.

Therefore, by a liberal application of moisture the first week you will not only conserve the moisture in the egg, but you will also remove the possibility of the germ developing too rapidly and bursting a blood vessel.

In actual tests we have been pleased to find that when moisture was applied the first week, instead of the third, the results were far more gratifying, the chicks were better and the percentage of the hatch higher.

These results were obtained under conditions as nearly like those under which the less pleasing results were obtained when the other methods of handling in regard to the moisture question were employed. The moisture question will doubtless continue to be a great unanswered question in the future as it has in the past. You can only solve it by determining the peculiarities of your own individual machine and governing yourself accordingly. Remember that every machine manufactured, even though it be manufactured by the same firm as others, has peculiarities just the same as every hen.

Chesla Sherlock.

WHITE DIARRHOEA.

Dear Sir: I see reports of so many losing their little chicks with bowel troubles, so thought I would tell my experience. I used to lose a great many of my little chicks from this cause, tried a good many remedies and was about discouraged with the chicken business. Two years ago they began to die and I thought I would try Walker's Walko Remedy. I used two 50c packages, raised 300 White Wyandotte chickens and never lost one or had one sick after getting the medicine. Readers can get it by sending 50c (M. O.) to the Walker Remedy Co., U. 8 Lamoni, Iowa. I wouldn't try to raise incubator chicks without it.—Mrs. C. M. Bradshaw, Beaconsfield, Iowa.—Adv.

SPROUTED OATS FOR POULTRY.

To the Editor of The Homestead:

I believe no green food equals sprouted oats in value for chickens. Last summer I raised 200 Buff Orpingtons on free range, where there was plenty of grass, but they ate only a small amount. The reason was that they had access at all times to sprouted oats.

My system of sprouting oats has, I think, some points of advantage over those ordinarily used. I sprout my oats outside in wooden frames, right in the yard where the chickens are kept. I generally use eight-foot fencing boards, but any ordinary lumber, such as can usually be picked up about the place, will answer. First, make a frame four feet square with four boards on edge. This will make a frame six inches high, if you use fencing. Now, nail boards across this frame leaving about one inch space between them. I have made the frames larger than four feet square, but find them too heavy. By leaving one inch between the boards you give the oats plenty of ventilation.

Soak your oats (about one-third bushel) in an equal amount of water. In winter oats should be soaked in warm water, but I used city water, just as it came from the hydrant, for my oats all last spring and summer. By adding a few drops of a formaldehyde solution (such as can be purchased at the drug store) to the water, it is said that you can prevent mold, but mold gives no trouble in these outdoor frames; one point of advantage.

After the oats have soaked for twenty-four hours, spread an area about one inch thick on the ground, just so the frames cover it all. The chickens cannot bother it, except to pick a little along the edges under the frame. At first I covered the frames with muslin instead of boards, but the hens were not long in picking a hole into it. You may have to sprinkle the oats once every two or three days, but if there is one good rain during the sprouting period, this will not be necessary.

The oats will be three inches long in about a week's time. This is about the time to feed, if you would get the most out of them. If the weather is very wet and you leave them longer, they may sour. Watch them, and at the first sign of souring, feed without delay, as in this beginning of fermentation, they will not hurt the fowls. I was bothered very little, though, with souring.

In feeding simply move the frame over a little every morning—six inches or a foot—depending on the number of chickens. After they get accustomed to it, give them all they will eat. I begin to feed it to the little chicks when a week old. Oats one-half inch long are right for them. They greatly relish the sprouts, and, like older chickens, eat roots and all.

When oats have sprouted three inches, the bulk of your feed is increased several times, and likewise the palatability, and digestibility, along with the increase of food elements, taken from the air, and from the ground by the tiny rootlets. They thus save much of the grain bill, and supply growing and laying, instead of fattening food. This is what is desired in young and laying stock.

In the latitude of northern Iowa these frames can be used from the beginning of April to November. In case the weather gets frosty, simply cover with straw or a blanket. These frames are a great thing for those raising poultry on a small area. If you have an area of land eight feet by four feet (enough for the use of one frame) you can provide almost enough green food for fifty hens all summer. If the land has a tendency to get sour, sprinkle it with a little air-slacked lime. They are also fine for flocks with plenty of range, because chickens relish the quick sprouted oats better than any green food on the farm, and the frames furnish a convenient way to grow it for the little chicks.

I have had two years' experience with a patent oat sprouter, in which the heat is furnished by a lamp. It is a great thing in winter. "Poultry silo" expresses its worth. The frames, obviously, cannot be used in winter. I have used mangel-wurzels, cabbage, cut clover, and boiled potatoes, in winter, but the chickens won't notice these until the sprouted oats are eaten.

The whole truth about lamp sprouters is not told in the books or literature. In the winter of 1912, I used mine in the house and in the cellar; in both places with success in so far as a product of sprouted oats was concerned. But the odor produced in that process was so disagreeable, that the sprcuter was moved out doors as early in the spring as possible. In the winter of 1913 I used it in the barn. To get the necessary heat, it was covered with building paper, and two horse blankets and an old overcoat wrapped around it. The results were satisfactory, and I had plenty of

Feed Growing Chicks Right

They must be furnished with the right kind of material if they are to make satisfactory growth of muscle, bone and feather. Profit lies in quick growth and early maturity. Rush these cockerels to marketable size and turn them into cash before prices fall. Get the pullets completely developed and ready to fill the nests with fall and winter eggs.

Pratts Baby Chick Food

contains just the necessary ingredients to give them during the first three weeks the best possible start, at a cost of 1c per chick. In boxes and bags, 25c, 50c, $1 up. After the third week mix

Pratts Poultry Regulator

in the ration to aid digestion and make the greatest gain for every pound of feed consumed. 25c, 50c, $1. 25-lb. Pail, $2.50.

EmbdenGeese One mated pair, 1st goose Iowa State Fair and a choice gander for $8. F. L. Reinhard & Son, Ottumwa, Iowa.

sprouted oats for a flock of eighty birds all winter.

My lamp sprouter is of wood outside. I would prefer one all metal because the wood gets moldy. Mold is the greatest trouble in indoor sprouting; a trouble you rarely have in the outdoor frames I have described, because there the growing oats get plenty of fresh air and sunlight. My treatment of mold is not orthodox. I watch closely for it, and pick off the moldy sprouts in their very beginning. The chickens eat this without harm; if mold has progressed much the fowls will not eat the oats unless starved to it.

I have for a long time been shaping my plan for a winter oat sprouter for a large flock—200 hens or more. I would have a separate building ten feet square, all cement. There would be a window and a door in the south side. The floor would slope to the northeast or northwest, where an inch pipe in the wall would let the water drain off. A first-class tank heater used to furnish warm water for the chickens, and to cook small potatoes, turnips, and roots, would furnish the heat and water for the oats.

Around the west, north and east sides, would be galvanized frames, in which a great number of galvanized, sliding trays, two feet square, would furnish all the sprouted oats for as many chickens as you wished.

W. C. Cummings,

Deleware Co., Ia.

LICE AND MITES.

To the Editor of The Homestead:

Lice and mites are the worst enemies with which the poultry keeper has to deal. There are several kinds but the two commonest kinds are the gray body lice which live on the fowls and the little mite whose smallness is made up for by the enormous numbers in which he appears in the henhouse. Once let a henhouse become infected with the mites and it is almost impossible to get rid of them. They multiply very rapidly and live on filth and refuse matter. Without doubt the numbers in an infected henhouse will often run into the hundreds of thousands and perhaps into the millions. Many houses unsuspected swarm with them.

The gray body lice can be killed by dusting the hens with insect powder, greasing or dipping in sheep dip or tobacco water, or confine them a short time in a box or barrel painted on the inside with lice killer. Wood ashes mixed with the dust in the dusting box, equal parts of each, will keep away lice. A little vaseline on the heads of small chicks as a prevention of lice is better than lard and if purchased by the pound is not much more expensive.

Thorough and persistent work is needed to rid a house of mites and keep it free of them. If the house is tight fumigate with sulphur, if not whitewash with hot lime, to every gallon of which add one ounce crude carbolic acid. Remove the roosts, nests and other fixtures and saturate with kerosene before putting them back.

Twice a month shut up the house and throw around air slacked lime and sulphur. Wash the roosts frequently with a lice killer, a cheap and handy one can be made as follows:

Cut into small pieces one bar soap, boil in about a gallon of water until dissolved, remove from fire and add one pint kerosene. To be used as hot as possible.

A single mite can do no harm but thousands can. We have seen sitting hens killed by these mites and there is no doubt that often their presence in a flock cause a very great decrease in the production of eggs by the fowls.

These mites are grayish in color before they have feasted on a fowl. Then they fill themselves with blood and this shows through the transparent skin of the mite. This gives them the red color by which they are known "the little red mite." In their natural color they are little noticed on the roosts and under the straw and other litter in the nests. As they multiply with great rapidity they have by March filled every crack in a poultry house where they are permitted to remain.

Till I lost a sitting hen by the attacks of these little vampires I did not believe that it was possible for such small things to kill a large

PLYMOUTH ROCKS.

strong, vigorous sitting hen. Having had no mites in my henhouse for years I did not believe that any existed there at the time I set two hens in rather dark nests.

In about two weeks I noticed that one of the hens seemed to be sick although I was unable to detect any particular trouble. Her comb had turned very pale almost black. I took her from her nest and carefully examined her, but nothing was discovered to indicate the source of the trouble. Of course, the mites that had been sucking her blood in the night had all left her by daylight, and had taken refuge under the straw in the nest.

Two or three days after that I found the hen dead half way off the nest with her wings extended. The little vampires had sucked such quantities of blood from her that there was not enough left for heart action. Yet I did not even then suspect the cause of the death of the hen.

Another hen was placed on the eggs and in two or three days I noticed that her comb was also becoming pale and that she was growing weak. She was taken off the nest and was almost too weak to move about. The eggs were taken out and the straw removed when it was discovered that the bottom of the nest was one mass of red fat mites, every one of which had nightly feasted off the sitting hens.

They were destroyed and new nest material put into the nest.

I consider it a striking illustration of the deadly character of the attacks of these mites.

There is no doubt that in addition to the damage these mites do in sucking blood, there is another damage they do that must not be lost sight of.

They spread disease from one bird to another by sucking blood from one bird and then another. The losses from this cause is undoubtedly very great. A. F. S.

POINTERS

—The advertisement of Arthur T. White, Emerson, Iowa, quoting prices on Barred Plymouth Rock eggs appears elsewhere in this department.

—Mrs. Geo. W. Johnston, Kent, Iowa, can supply Homestead readers with White Wyandotte eggs. Her prices are named in the advertisement elsewhere in this department.

—If wishing to purchase Single Comb Rhode Island Red eggs read the advertisement elsewhere in this department of F. L. Shackleton, Boone, Iowa, quoting prices.

—For prices on White Holland turkey and White Plymouth Rock chicken eggs read the advertisement of A. E. Sutherland, Madrid, Iowa, elsewhere in this department.

—Baby chicks and eggs from Single Comb Buff Orpingtons of the Cook strain are offered for sale in the advertisement elsewhere in this department of H. E. Gerry, Traer, Iowa.

—F. J. Sexsmith, Orient, Iowa, is quoting prices on Mammoth Bronze turkey eggs, delivered either by express or parcel post, in his advertisement appearing elsewhere in this department.

—Mrs. E. S. Wallcott, Richland, Iowa, can supply Homestead readers with White Plymouth Rock eggs from a high-scoring and extra good laying strain. Her advertisement appears elsewhere in this department.

In furnishing copy for his advertisement of White Plymouth Rock eggs that appears elsewhere in this paper, H. B. Francisco, Hastings, Neb., states that their poultry flocks are in the finest possible condition and that the hatches are especially good this season. Mr. Francisco is pricing eggs from selected matings at $1 for fifteen; $2, for thirty, and $5 for 100 eggs. These prices are, of course, very low, but they wish to sell this stock as fast as produced. Mr. Francisco also asks that readers of this paper enclose payment with first letter for the amount of eggs wanted, and he guarantees to

please. This will save unnecessary delay, and the writer wishes to say that Mr. Francisco is dependable. Mention this paper when you write.

—W. W. Perry, New Hartford, Iowa, is quoting prices on Single Comb White Leghorn eggs in his advertisement appearing elsewhere in this department.

—Eggs from Rose Comb Rhode Island Reds are offered for sale by J. Nissen, Meservey, Iowa, at prices named in his advertisement appearing elsewhere in this department.

—Mrs. P. J. Eggers, Denison, Iowa, is quoting prices on full-blooded Buff Rock eggs from strong, healthy, scored stock in her advertisement appearing elsewhere in this department.

—Eggs from a selected pen of Barred Plymouth Rocks can be furnished by the Hammond Ave. Poultry Yards, 215 Hammond Ave., Waterloo, Iowa, as per advertisement in this department.

—If wishing to purchase Pekin duck eggs or drakes the prices quoted in the advertisement of Miss Edith Young, Huntertown, Ind., appearing elsewhere in this department, will be of interest.

—Any reader of The Homestead having Pekin duck eggs for sale should read the advertisement appearing elsewhere in this department, the address of which is P. O. Box 734, Des Moines, Iowa.

—Eggs from the White Quill strain of White Wyandottes from stock from state show winners are offered for sale by Ethel H. Shaw, Newton, Iowa, in her advertisement appearing elsewhere in this department.

—Chas Guth, Berwick, Iowa, is offering White Plymouth Rock eggs for sale from a pen headed by grand champion male at the 1911 Des Moines show, in his advertisement appearing elsewhere in this department.

—Mrs. Eva G. McCoy, Prairie City, Iowa, raises White Wyandottes exclusively. She has a flock of pure breds from which she is quoting prices on eggs in her advertisement that appears elsewhere in this department.

—Barred Plymouth Rock eggs are offered for sale by Mr. and Mrs. S. W. Miller, Truro, Iowa, in their advertisement that appears elsewhere in this department. Their flock is headed by cockerels of the Bradley and Thompson strain.

—Mrs. H. J. Hess, Waterloo, Iowa, writes: "The Barred Plymouth Rocks I am offering eggs from are large, heavy-boned stock of the Bradley strain, and are closely related to Chicago show winners. My White Wyandottes are also choice, pure-white birds and descendants of prize winners. I can supply eggs, carefully packed, at reasonable prices." See her advertisement elsewhere in this department.

—E. S. Dyas, Bellevue, Iowa, writes: "Our White Wyandottes are extra large, pure white; not a bit of brass on the farm. The eggs this season are testing about 100 per cent fertile, and on account of the vigorous breeders those who buy eggs from us will get chicks that they can raise without trouble. The Pekin ducks are of the Mammoth strain; none better anywhere. Satisfaction guaranteed." See advertisement elsewhere in this department.

—H. J. Brown, Belmond, Iowa, in furnishing copy for his advertisement offering eggs for sale from Barred Plymouth Rocks and White Wyandottes, that appears elsewhere in this department, writes: "My birds have been prize winners for the last ten years at Iowa Falls, Ames, Algona, Dows and Mason City shows. Last year I won nine out of eleven first and nine club ribbons. My birds are all raised on the farm, are large finely marked and good layers. Here is a good chance to get started with thoroughbred stock at a cheap price.

—"I have as fine a lot of Barred Plymouth Rocks of the E. B. Thompson strain, as I have every had," writes Mrs. H. E. Brown, Corning, Iowa, in furnishing copy for advertisement found elsewhere in this department. "Have one pen that is strictly pure-bred Ringlets mated with a fine cockerel direct from Thompson yards. My White Plymouth Rocks are up to date in every way and are of the Fishel strain. Can also furnish eggs from S. S. Hamburgs and Embden geese. I will guarantee a good hatch or replace eggs at less than one-half price. Special mating list may be obtained upon request."

—George Westwood, Waco, Neb., in sending copy for his advertisement of Barred Plymouth Rock eggs, which appears in this issue, states that the matings from which these eggs are selected are among the best he has ever made, and Mr. Westwood is a veteran breeder and a showman that has made a good record. Homestead readers wishing choice stock at what is certainly low prices should look up the advertisement and write at once. Mr. Westwood is a good man to do business with and cash may be sent with order with perfect safety. Address George Westwood, Box 20, Waco, Neb. When you write mention The Homestead.

Toulouse Geese eggs from matings that have produced excellent stock are being offered by H. B. Francisco, Hastings, Neb. Readers of this paper in search of the very choicest stock should write Mr. Francisco at once. Eggs from the old matings are priced at twenty-five cents each and from the younger matings at twenty cents each. Six to seven eggs are generally bought for a sitting and Mr. Francisco requests that purchasers send cash with order, that is check or P. O. money order or something of that sort and save the unnecessary delay caused by writing for prices. The writer is personally acquainted with Mr. Francisco, knows well the flocks of poultry and does not hesitate to recommend this

WYANDOTTES.

stock to readers of our paper. When writing mention this paper and address H. B. Francisco, Hastings, Neb.

—Read the advertisement of O. N. Woody, Newton, Iowa, offering Buff Plymouth Rock eggs for sale, that appears elsewhere in this department.

—The advertisement of H. C. Schrage, Bristow, Iowa, breeder of Silver Spangled Hamburgs, offering eggs for sale appears elsewhere in this department.

—Frank B. Caldren, Clarksville, Iowa, has eggs from high-scoring, dark red, low-comb Rose Comb Rose Island Reds, on which he is quoting prices from two different pens in his advertisement that appears elsewhere in this department.

—L. Tieden, Elkader, Iowa, is offering Single Comb Black Minorca eggs for sale in his advertisement appearing elsewhere in this issue. He writes: "I have as fine a lot of Single Comb Black Minorcas as you can find. They are bred for size and laying qualities."

The advertisement of E. W. Day & Son, Kellogg, Iowa, breeders of Duroc Jersey hogs, appears on page —of this issue of The Homestead. They are offering fall boars for sale sired by Queen's Chief 12633 and out of dams by Stout's Advancer 63503 and Double Wonder II 100625.

—Alex Peterson, Pomeroy, Iowa, writes that he has high-scoring cockerels at the head of both of his Black Langshan pens, and that he has been a breeder of this strain of chickens for over sixteen years. In his advertisement elsewhere in this issue will be found prices on eggs.

—Mrs. Wm. Stoll, breeder of Barred Plymouth Rocks, Storm Lake, Iowa, writes: "I have three fine mated pens, headed by first prize winners. I also won diploma last fall for best Plymouth Rock cockerel at Storm Lake." See advertisement offering eggs for sale elsewhere in this department.

The advertisement of Mrs. Clyde Nelson, Birmingham, Iowa, in which she is offering Single Comb Brown Leghorn and Fawn and White Indian Runner duck eggs for sale, appears on page 13 of this issue. Those who want eggs from either of the above varieties should write Mrs. Nelson for prices.

—Theo. Martin, Bellevue, Iowa, in remitting for advertising already done, writes that he has the best flock of Barred Plymouth Rocks this season he has ever had. Also that he has added five of the best cockerels that he could find and his poultry business is increasing 100 per cent annually. See advertisement elsewhere in this issue.

—C. & C. T. Van Lint, Pella, Iowa, in their advertisement elsewhere in this issue, ask Homestead readers to send for their catalog and learn about their strain of Buff Plymouth Rocks from which they are offering eggs for sale. Their Plymouth Rocks have always been winners at state and other leading poultry shows. They also have Rouen duck eggs for sale.

—J. O. Becker, Chariton, Iowa, has four pens of Barred Plymouth Rocks (two cockerel and two pullet matings) from which he can furnish Homestead readers with eggs at prices named in the advertisement appearing elsewhere in this department. Mr. Becker has been a breeder of Barred Plymouth Rocks for twenty-five years and keeps his flock up to the standard requirements.

Eggs and Baby Chicks.

—Elsewhere in this department Mrs. L. C. Reese, Prescott, Iowa, advertises Barred Plymouth Rock eggs and baby chicks for sale and she has one of the best flocks in the West. These are from the best prize-winning stock of the celebrated Bradley breeding and she has eggs for both cockerel and pullet matings. Everything in her flock are high-scoring birds, so you get the very best when you order of Mrs. Reese. Write for her free circular at once and send her your order.

A Roup Preventive.

In all classes of live stock raising, proper methods of preventing disease are more important than cures. Good sanitary conditions must be obtained and in order to do so it is necessary to make use of some preparation which will purify and assist in the eradication of disease germs. In the raising of poultry B.-K. advertised on page 21 is recognized as a non-poisonous germ destroyer and disinfectant. It is easy to use and it is inexpensive. Samples may be obtained by writing to General Purification Co., 501 Pioneer Bldg., Madison, Wis.

Turkeys and Buff Plymouth Rocks.

The engraving which appears below shows a pair of Rouen ducks bred by H. Schehl & Sons, whose advertisement will be found on page 22. The Messrs.

Schehl also breed Buff Plymouth Rocks and White Malines. Their ducks have size, good-laying qualities and excellence of color. They have won many premiums at the Chicago Poultry shows and other exhibitions. For price list and account of winnings, write to H. Schehl & Sons, Prophetstown, Ill.

This rat destroyed over one dollar's worth of property last year. Every other member of his tribe did as well. How much disease they spread no one can tell.

The farmer is one of the worst sufferers from their depredations. They make his corn crib their headquarters; they burrow through his silage and ruin it; they gnaw through the floors of his barn, granary and poultry house; they hide under his board walks or wooden floors or in his cellar.

There is only one effective way to stop the rat. Build of concrete. Rats cannot gnaw through or climb up concrete. There is no nesting place for them under concrete floors. Any structure built of concrete is proof against them.

When you build of concrete always specify

UNIVERSAL PORTLAND CEMENT

It is uniform in color, quality and results. Let us help you with your concrete work. Send for our free book, "Concrete in the Country."

Why He Prefers The BEATRICE Cream Separator

Farmer Onswon says:

Years of experience have taught me one indisputable fact: There is only *one* separator which combines high quality with moderate price—that is the BEATRICE. Most every farmer is aware that the average high-grade separator of big capacity costs from $100 to $110. My BEATRICE, with 1000 pounds capacity, cost me $75. Why pay more? There is no better machine.

Less than 2 minutes is all the time it takes to clean the machine with the patented device. It will leave the machine thoroughly clean and sanitary. Try it and see.

My BEATRICE beats any machine I ever had for easy running. Then, the close skimming. Why, I've let skimmed milk stand for a day and a half and you couldn't find a speck of cream on it. And—I haven't done so little repairing since I owned a separator. That's a point *you* want to consider.

The BEATRICE is a guarantee of separator satisfaction. That's what you want. Ask your dealer or write for booklet to the nearest address below. 600 lbs. capacity, $55. 800 lbs. capacity, $65. 1000 lbs. capacity, $75.

THE CALVES FROM THE BEST COWS.

Dairymen, like every other class of producers, sometimes get into a rut. We have known instances where year after year the entire crop of dairy calves has been sacrificed for the simple reason that the owner felt that it paid better to utilize his feed for producing animals, trusting to luck as it were, and his own judgment in keeping up his herd by outside purchases. We are not prepared to say that this plan is never a justifiable one, but we do say that in the majority of instances it is not a sound policy. A heifer calf from a high producing cow whether she is a grade or a pure bred ought to be tried out in the dairy. If sired by an animal that is bred along dairy lines there is always a possibility of taking a step forward because the daughter may be a better milker than a dam. In his recent work on dairying Prof. Charles B. Lane takes up this matter and points out that the expense of raising a calf is relatively so small that there is little excuse for sacrificing calves of good cows. On this point he says:

It is a mistaken idea that it costs too much to raise cows. The Illinois Experiment Station carefully investigated this subject by raising forty-eight calves. Records were kept of twelve at a time during four different periods. It was found that they could be successfully raised on 150 pounds of whole milk costing $1.50 and 400 pounds of skim milk costing $1.20. This milk was fed at the rate of ten pounds per day until the calves were fifty days old, when it was gradually lessened to one pound per day for ten days, when no more was fed. Only the ordinary grains which the farmer produces and a good quality of legume hay were fed, showing that the dairyman can raise a calf in this way with little trouble.

Successful dairymen state that they raise heifer calves at a cost of $18 to $20 up to the time they are two years old, and frequently sell them for $50 at this age. Even if it cost twice the above amount to raise them there is a good margin of profit. This is a good business proposition and shows that it is better to raise cows than to buy them.

That the dairyman should raise his own cows is one of the fundamental elements of profitable dairying, and the lack of application of this principle is responsible for a large per cent of the poor herds in this country.

While we are not prepared to confirm wholly the statement that a calf can be raised on 400 pounds of skim milk and 150 pounds of whole milk in addition to a grain ration, yet the data given by Professor Lane is no doubt approximately correct. We believe in keeping up the milk supply until the calf is five or six months old, particularly when skim milk is used, but even when this plan is carried out the additional cost of raising the calf does not then become a very important factor.

Men who have become expert in judging dairy cattle eventually acquire a knowledge that enables them to detect a good milker among the heifer calves, so that if good judgment is used selection may be made in such a way as to almost insure the development of a heifer into a profitable cow. Whether she is to be an exceptionally large producer or not remains to be seen when she is put to her tasks, but with a good dam to begin with, a sire of dairy proclivities and with the appearance of a producer in her favor it amounts almost to an unpardonable blunder if such a calf is vealed.

USING MUSLIN CURTAINS IN DAIRY BARN.

To the Editor of The Homestead:

From years of experience in keeping cows I have found that about the greatest problem to meet is the question of proper ventilation without having the wind blow directly on the animals, and at the same time keep the dampness out of the barn.

Three years ago I decided that the curtain would answer the same purpose in the dairy barn that it would in the henhouse and following that decision I began the use of muslin curtains and have found them quite satisfactory; in fact, I would not give them up.

These curtains may be installed by

The Hinge Door Silo

COPYRIGHTED

Has doors that you never have to take out, but instead can open and close on hinges. Doors can't sag, stick, bind or freeze in, yet are always air-tight, and protect the silage from freezing in winter and drying in summer.

Big, extending malleable hinges form a safe and convenient ladder—steps 15 inches apart, 17 inches wide and 7 inches deep.

Positively highest grade material and construction.

Send your name quick for copy of our book telling about Hinge-Door, and

They'll enrich your meadow and start the clover
And soon your farm will be rich all over.

Fills 60-ft. Silos With Ease!

The day of the skyscraper Silo is here. No Silo too high for the Smalley! Mr. H. E. Williams, Clinton, Wis., says: "The Smalley No. 18 Force Feed cutter with chain drive blower did fine work. We filled one silo 14x36 feet in 8 hours with 8 teams hauling the corn." When C. I. Cook, Menominee, Mich., wanted to fill the 4 biggest Silos in the U. S. he got a Powerful "Smalley." Real business farmers like Messrs. Williams and Cook have no time to fool with the old slat-apron type of machine. They want this **force-feed chain-table, grip-hook** kind, made by Smalley only. Thus they save a **tremendous** amount of work and do a **quicker, cleaner** job. No coarse, uneven silage. All **uniformly** cut. Which means greater tonnage per silo.

POWERFUL SMALLEY FORCE-FEED SILAGE CUTTER

not only handles green silage, but is also a wonder at cutting dry feed. Handles alfalfa, for instance, to perfection. Letters in catalog prove it. Many farmers use their **Powerful "Smalley"** to cut corn in the fall and oats and peas in the spring for feeding when pastures dry up in July. Only one drive pulley on Blower outfits. No idler to bother with. Ten per cent steel guaranteed in all foundry castings. No oiling by hand—hard oil cups on all important bearings.

You won't know what a real Silo Filler is till you've seen the **Powerful "Smalley"** or had the Smalley Catalog. Why not send a postal this minute for the latest Smalley Catalog and learn about the Silage Machine that four out of five silo owners now use? Write **now** and you'll get this fine, useful Book **by return mail.**

And get a Holstein without fail.

removing some of the windows and substituting frames on which the muslin has been securely tacked. It should not be supposed, however, that the muslin allows anything like free play of the air. The thermometer may show the temperature to be two or three degrees lower than before the curtains were installed, but I find that it invariably feels ten to fifteen degrees warmer and the animals appear quite comfortable and contented. The result of this practice in my barn is just simply the difference between fresh, dry air and damp, stale air, with a much more sanitary and healthful condition.

The principle is exactly the same as that worked out in the poultry house. Even when a poultry house is kept as warm as absolutely tight doors and windows can make it frequently the walls will be seen to be covered with moisture. This condition usually results in sick hens and I have found that the same holds true with cows. Damp cow barns are the best breeding places for all kinds of disease and I think the adoption of the muslin-curtain system will do much toward solving the problem of disease among cattle, especially milk cows.

These curtains admit the air, but not the wind and there are no drafts as is the case with open windows. Standing a foot or two from the curtains one would hardly notice that there is any entrance of air. I find it best to have some glass too, for while the muslin admits the light freely, it does not admit the sunshine. For that I have enough windows to admit plenty of sunlight and then have my muslin so arranged that it will admit plenty of air without causing any drafts. Roy Coleman.

THE COST OF MILK.

Officials of the United States Department of Agriculture and others who have reasons to know, agree that the average dairyman supplying a city trade is not being paid enough for his milk. With prices of land, labor and feed as high as they are, it is impossible to produce good milk cheaply and it is equally true that good milk is worth as a food the price which is generally asked for it.

One of Wisconsin's best known and most experienced dairy farmers, W. J. Dougan, is producing and distributing a bacterially clean milk at a price of ten cents per quart to the residents of a southern Wisconsin city. Although this is considerably more than is being paid by the average consumer, Mr. Dougan finds it close work to make his dairy farm pay the profit which it should. He has recently written us as follows:

As I watch the struggle upon the milk supply of our large cities I am impressed with three facts. First, that it is impossible to produce a wholesome and safe milk at the price now being paid for market milk. From experience I know that it takes brains, muscle, capital and eternal perseverance to produce and distribute a clean milk. I am producing and distributing a bacterially clean milk at ten cents per quart to the residents of a city of about 20,000 people and I find it close work to make good at that price. Secondly, that bacterially clean milk because of its natural food value is a cheap food even at an increase over the present market milk prices. It is easily prepared and is readily digested. One quart of this milk is in fact equal in nutrients to three-fourths of a pound of beef steak and is worth considerably more when we consider the cooking expense and the waste with the steak and third, that the great need of the milk supply problem is to create a discriminating taste on the part of the consumer. He not only needs to discriminate both between good milk and bad milk, but also between milk and other foods. Much milk finds a too ready sale even among the intelligent classes, which is so consumed by bacteria that it is worse than worthless. It is poisonous. When the consumer knows what he wants and knows when he gets it and is willing to pay a living price for it, there will be plenty of intelligent and conscientious producers and distributors to supply their demand at a just price.

It seems to me that the press could do a larger service by decrying some of the real foes of babies, rather than to exhaust themselves complaining of the prices asked for milk. I make this standing offer. I will furnish every family in any liquor licensed town or city with all the milk and butter they can use without stint or limit if the city will pay me what is now expended for drink and tobacco by its residents. I have offered to feed the baby of a smoker, who said he could not afford to buy good milk, if he would give me what he daily spent for tobacco. He would not do it. I have had, among my patrons, a well-to-do family which was taking a whole pint of milk daily complain

DE LAVAL CREAM SEPARATORS

No Excuse for any Cow Owner Being Without One

There is no reason why any cow owner who sells cream or makes butter should be without a cream separator and there is no excuse why he should not have the best separator.

Any creameryman or experienced dairyman will tell you that a good cream separator will give you a great deal more and a great deal better butter than you can make with any gravity setting system, and equally, of course, more and better cream, if you are selling cream.

The DE LAVAL is acknowledged by creamerymen and the best posted dairymen the world over to be the **"World's Standard"** and the one and only separator that always accomplishes the best results possible and always gives satisfaction.

You cannot make the excuse that you can't afford to buy a De Laval, because it will not only save its cost over any gravity setting in six months and any other separator in a year, but is sold either for cash or on such liberal terms that it will actually pay for itself.

A little investigation will prove to you that the truth of the matter is that you really can't afford to make cream or butter **without** the use of a DE LAVAL cream separator.

The nearest De Laval local agent will be glad to demonstrate this to your own satisfaction, or you may write to us direct.

of my price and buy six-cent milk because my milk was too expensive. I happen to know that the head of this family smoked more than $1 worth of cigars a day. I mention these incidents merely to show that people get what they want and are willing to pay for it.

It is incumbent upon the dairy industry to provide so wholesome a product that people will really want it and also to instruct the public in the value of milk and its manifold uses. Those engaged in dairying must eliminate waste, killing competition and all expenses which tend only to increase the cost of milk to the consumer without improving the quality of the product.

THE COLOR OF HOLSTEINS.

While it may be unfortunate for the breed to have inferior grades because of their black and white color regarded or known as Holsteins these markings are assets which breeders of this old and popular Dutch breed can ill afford to lose. That there is a decided tendency for Holstein specialists and those who imitate them to discard as breeding animals those showing much black and to use near white, though inferior stock is generally known and acknowledged. Four-fifths of the farmer dairymen who write to Malcolm H. Gardner, superintendent of the advanced register, for advice in the purchase of sires indicate a preference for animals light in color. When asked to explain this prejudice against the darker colored sires nearly all reply that they have noticed "Holstein breeders seem to prefer light colors in buying bulls to head their own herds."

So persistently are breeders and dairymen following this color fad that Superintendent Gardner has grave fears that it will furnish a serious problem for the breed in the future. To show the futility of this craze he points out that his records show that the great majority of the greatest cows of the breed have shown dark colors, that the great majority of the foundation stock imported from Holland had the black and white markings in nearly even proportions, that white is the most persistent of colors and the most difficult to breed off and that adherence to any fad is not only detrimental to a breed, but that it also has a tendency to narrow the market for stock of that breed.

THE BULL AND HIS VIM.

To the Editor of The Homestead;

A bull ought to have lots of vim in him. To show what I mean I will say that the bull we now have is so full of life that he can scarcely contain himself. When out of doors, he will fight every animal that comes near him. If he can do nothing else to work off his steam, he will pitch right into the side of the barn with his head. He was so vigorous in this direction that we had to take his horns off, much as we disliked to do it, and since then he has used his bare head to pretty good advantage since the sore spots healed.

Now the calves from that bull are fine calves. They begin right off to live and get around, and they are all healthy and thrifty animals. They take after their father in this respect, and I am very glad of it, for I consider life and vigor to be one of the best and most valuable characteristics a dairy creature can have.

I have seen bulls that did not seem to care whether school kept or not. I have, in fact, had some of these myself. They would stand in the stable with their heads down, and when out in the field their movements were slow and languid. They did not seem to have the vigor which it seems to me a perfect head of a dairy should have.

If I were buying a bull I would want to see him out of doors and watch him a little while before I decided whether to take him or not. If he jumped and ran and kicked up his heels, I would conclude that he thought life was worth living, and I would be favorably inclined toward him; otherwise not, whatever other good qualities he might display.

Because, the thrift of the bull has a wonderful sight to do with the success of the dairy. Vim passes on from generation to generation, as a rule. "Like begets like" is a saying so old nobody knows where it came from, but it has a mine of truth in it.

We may well mistrust a bull that is weak and languid. He is not well. It may be tuberculosis or some other bad disease. And we want to keep just as far from any trouble of that kind as we can. I am not cranky on this point, and yet I do believe that we may do a great deal toward bettering our herds by using more care in the kind of a bull we use. Far too often we pay great attention to the stock of the cow, but pass the selection of the bull by lightly. If he came from good stock, that is about all we want to know. That is not right. What is the bull in and of himself? Has he the necessary qualifications to make him worthy to be at the head of a herd of cows? If not, we don't want him, cost what he may.

E. L. Vincent.

DON'TS FOR DAIRYMEN.

"More don'ts! Why don't you give us more do's? We are sick and tired of so many don'ts!"

Well, that is all right, of course; and yet, the don'ts I have in mind just now have not been harped on so that they are really to be classed in with those you possibly have in mind. Listen, and see if you think they are.

In the first place, don't think you know it all about dairying. Some men do get that idea into their heads and it just about spoils them as far as making any progress is concerned. The truth is, there is something for us all to learn.

And don't think you may overdo the matter. You won't burst your head with knowledge along this or any other line. Nobody ever did. Few of us ever reach anything like the limit in that direction. If the time ever comes when a man really does know so much that it hurts him, I want to see him. He will be a living curiosity, sure enough.

Still more, when we all get these two truths into our heads honestly and thoroughly we won't let any grass grow under our feet before we begin to do these other things: We will see what a mess we have made of it in the past. We have lived so far below our possibilities! We will then begin to inquire around for some better cows. We can find them, without any difficulty, for that is another thing few of us ever saw—the really and truly best dairy cow. Always room for one just a little better.

That cow will cost something. Don't let that worry you. Rake and scrape till you can buy for her and pay for her. It is not necessary to buy fancy stock. In fact, that is rather risky business. What we want on our farms is a good, practical, common-sense cow that comes within the range of our means to buy and that will and does do business on the square, giving her owner a good profit every year.

But last of all, don't let us stop with the cow. Let's get things to match—a real nice bull, some pails, cans and other implements such as are essential to better work than we have been doing. If we are making our milk up at home, a separator is fine

JERSEY CATTLE.

They Keep It Up

There are some cattle that give more milk when they are fresh than a Jersey, but there isn't any breed that gives as rich milk as

The Jersey

at as small feeding cost, nor is there any breed of cattle that will *keep it up* like Jerseys will, *year in and year out.* That's why you ought to buy Jerseys to increase your herd's efficiency. Send for Jersey facts.

AMERICAN JERSEY CATTLE CLUB
324 W. 23d St., New York

thing to have. Then, too, there ought to be a house devoted especially to the care of milk. Few farms have this kind of a building; and yet, if we are going to run a model dairy farm, and that is what we would like to do, all these things belong to it. And biggest and best of all, we need, and must have to come anywhere near coming up to our day dreams, a model farmer to go with the model farm.

SILAGE TO SUPPLEMENT PASTURE.

Although spring pasture has a very stimulating effect on milk and butter fat production, this increase is always greater when hay and silage are also fed than when pasture constitutes the entire ration. Such has been the experience of George C. Humphrey, of the Wisconsin College of Agriculture, who has charge of the University of Wisconsin dairy herds. He declares that where cows are confined to a barn and yards until pastures are far enough along, they may refuse to eat the hay and silage, but ordinarily they will readily partake of these supplementary feeds. For the past nine years is has been noted that as a rule more than three-fourths of the university herds lose in body weight during the first two weeks they are turned out to pasture. This shrinkage has generally varied in proportion to the amount of supplementary feeding. Two years when hay and silage were not fed in addition to the pasturing, a marked shrinkage in weight ranging from fifty-one to ninety-five pounds was observed.

FLY TRAPS IN STABLES.

To the Editor of The Homestead:

It will soon be time to begin war on the blood-sucking fly. My plan is to have the cattle sheds tight, all cracks well battened and a large entrance with good sliding doors. To take the place of ventilators have large fly traps on the ridge or highest part of the building. These fly traps can be very cheaply made with two-inch pine strips and common window screen. Have an opening from the shed up into the traps and when the cattle come in covered with flies drive them into the shed and close the doors tightly. This will make it dark in the shed except for the light which comes down through the traps and the flies will go up to the light, enter the trap and that is the last of Mr. Fly.

Cass county, Iowa.

Grading, Testing and Shelling Seed Corn.

By C. P Hartley, Department of Agriculture.

TAKE time by the forelock and get the seed corn and the corn planter ready for operation now before the rush of the other spring work. The soil and the seed are two prime requisites of a profitable corn crop. At this time of the year there are many days when weather or soil conditions prevent plowing or other field work, that can be profitably used in improving the quality of the seed corn. The seed supply can be improved in quality and productiveness by discarding the poor ears and the poor kernels.

The best time to grade seed corn is before shelling. The office of corn investigations of the United States Department of Agriculture proved by careful field experiments that an ear having kernels of undesirable shapes produces ears most of which have kernels of undesirable shapes. All ears that are undesirable for one reason or another should be discarded before making germination tests.

At this season for several years past a number of satisfactory means have been described for testing the germination of a few kernels from each seed ear. Those who have neglected to take good care of their seed corn may now find "dead" ears among their supply. In such cases it will be profitable to test the germination of each ear separately. Where well-adapted varieties are grown that properly mature before frost, poor germination has never been found among ears selected as soon as mature and cared for properly. Those who have given their seed proper care should pick out 100 representative ears and make a germination test of ten grains from each ear. If these ears germinate well it is not necessary to test the balance of the seed supply.

Before selling the small kernels should be discarded from an inch or more off the tips of the ears. Accurate field tests have proved these small kernels to be less productive than the fully developed kernels of the same ears. The thick, irregularly shaped kernels should also be discarded from the butts of the ears. These kernels produce satisfactorily, but their size or shape prevents the corn planter from dropping them satisfactorily. It is convenient to nub the entire supply of ears before the shelling process is begun.

Many farmers who plant twenty or forty acres of corn, carefully shell seed by hand and are profited by so doing. A few remarkably successful extensive corn growers shell hundreds of bushels by hand. Where much seed is required there is a strong temptation to run it through the corn sheller. Hand shelling is profitable for the small farmer and therefore more profitable for the extensive farmer. The sheller breaks or cracks some of the kernels and there is not the opportunity of examining kernels from different portions of each ear as in shelling by hand. After being nubbed the proper way to shell the seed ears is to shell by hand one ear at a time into a sieve that will let the chaff fall through and leave all the kernels from the ear in plain view for inspection. If unsatisfactory, all the kernels can be easily discarded and another ear shelled. The ears should not be shelled directly into the general seed supply for it would then be difficult to separate and discard the undesirable kernels.

If the corn planter gave trouble last spring better order a new one now. A poor corn planter is an expensive implement to use. Even though the planter dropped satisfactorily last year, it should be tested with this year's seed supply before planting time arrives. The kernels of a variety of corn frequently vary in size from season to season and different plates may be needed this year from those used satisfactorily last year.

Under favorable field conditions 10 or 20 per cent of the kernels or young stalks are destroyed. Where extensive plantings are made with first-class seed and thinning is impracticable about five kernels should be planted for every four stalks desired. Where help is obtainable that will attend properly to the thinning, it is more profitable to plant twice as many kernels as stalks desired and thin out the weak plants as soon as they become too large and hard to be destroyed by cutworms.

WORMS AND COLD.

One of our Nebraska subscribers, Mr. George B. Ham, gives the following description of his ailing hens:

My chickens are affected in this way: Their heads seem to draw back and quiver and some of them have a foam over their eyes. Part of them also have a diarrhea. They only live from two to four days. Their heads look red and healthy. Corn has been their only feed.

The foam over the eyes is only caused from a cold, but should receive immediate attention or it may develop into something really serious. Use an oil can to squirt kerosene into the nostrils and put a little permanganate of potash in the drinking water. These fowls were more susceptible to cold because they were in a run-down condition.

The trouble from worms is a more serious affair and prompt measures should be used. In many cases whole plants have been forced to go out of business from this cause.

Worms in small quantities infest the digestive organs of almost all fowls and animals, but in limited numbers do little, if any, harm. It is when their system becomes disordered that fowls are good subjects for the rapid multiplication of the parasites. Corn is a good feed if used in connection with other feed—oats, wheat, barley and green food, plenty of grit and crushed oyster shells. Some object to the use of oats, but there is small danger of the hulls piercing the crop if the fowl has access to grit.

The worms may be where they can be reached and they may not. In the latter case treatment is of no avail. As the trouble is infectious only that they pick them up from the droppings voided by the affected birds, it is advisable to treat the flock as a whole. Give one teaspoonful of Epsom salts and nine drops of turpentine for each three fowls after they have fasted all night. It may be given in soft feed or individually by pouring from a can bent to form a spout. Give no more feed until you get results then feed lightly of soft feed. Repeat every other morning for a week and after that give the salts once a week to keep the digestive tract cleaned out.

All droppings should be burned and if the yards could be moved to fresh soil it would simplify matters.

TUBERCULOSIS AGAIN.

One of our Wisconsin subscribers writes as follows:

I have a flock of Brown Leghorn hens, none over three years old, that appeared healthy until last September. Since then they have died one by one until I have lost about twenty. The first signs of the trouble are limping and combs get small and pale. Some live six or eight weeks while others die sooner. I opened a few and found the liver larger than natural and it was soft. The liver of another had large and small lumps all over it. My poultry have good care, such as is usually advocated by poultrymen and there has never been any previous trouble.

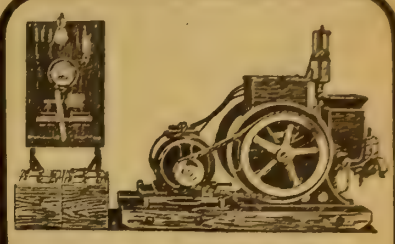
This disease exists in fowls long before any outward symptom is in evidence. Our correspondent has given us a very good statement of the facts which leaves no doubt as to her flock being afflicted with tuberculosis.

There is a single cause—the bacillus tuberculosis, and it operates through contagion only. Fowls that are closely confined with lack of fresh air and sunshine are more susceptible to this tuberculosis.

There is no cure. Separate the bright, healthy appearing individuals from the flock and if possible move them to fresh quarters. It is absolutely necessary to kill and burn all fowls that show any symptoms of the disease. The outward symptoms are infected joints which cause lameness and is often confused with rheumatism, and a listless anemic appearance. The post-mortem which showed the tubercles is the conclusive point.

Rake and burn all litter and spray every available inch of buildings and yards with any good disinfectant. Directions are to be found on the can. There are many different labels, but the contents are practically the same. Follow up with air slaked lime. Dust liberally into every nook and crevice as well as over the floors and yards. Add enough permanganate of potash to the drinking water of the flock to color a rich wine color. It is a good germicide and will keep the contagion from being transmitted through a common drinking vessel. Watch the flock carefully and promptly dispatch any fowl that shows the first signs of weakness.

With the coming of warm weather the trouble will be easier to combat. Few germs there are that can withstand the bright rays of a summer sun.



Electric Light

You can enjoy the comfort and convenience that electricity brings—a home equipped with better, safer light and handy power for the whole farm. The

Rumely Automatic Electric Lighting Plant

will furnish cheaper electricity than the kind city folks buy.

The Rumely Electric Lighting Plant is automatic from starting the engine to priming the carbureter—storage batteries fill automatically; automatic oiling system which starts and stops with the engine; heat coils and intake valves adjusted by governor at start.

This outfit will work for you with almost no trouble or care.

It's built to give satisfactory service at the lowest cost. New to you, maybe, but thoroughly tested.

The Rumely Automatic Electric Lighting Plant comes in five convenient sizes—to light 75 to 500 8-c.p. lamps.

It will pay you to investigate this outfit. Write for information and ask the name our of nearest dealer.

The Original **Air Cooled Engine**

My Pride

I am proud of this engine. Ever since I placed it on the market more than ten years ago it has given good account of itself. From time to time I have improved it as experience taught me more about engines. Today I don't see where a single improvement is necessary. I sincerely believe the Original Air-Cooled engine the most economical and efficient of all farm power. I most heartily recommend it.
R. E. Olds, Pres.

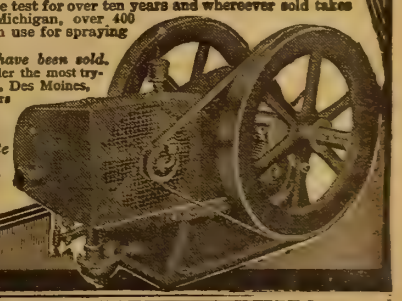
R. E. OLDS
Designer and Manufacturer

This engine was designed over ten years ago by the man who has *built* more gasoline engines and automobiles than any other man in the United States. The farmer needs a simple, reliable Air-Cooled engine for his work, an engine that can be started up on a moment's notice without the delay and annoyance of thawing out or providing water for cooling. The Original Air-Cooled engine is simple in design, light weight for the power delivered, runs as steady as a clock and is sold under guarantee to cool when working under full load.

PUT TO THE TEST

This engine has been put to the test for over ten years and wherever sold takes the lead. In Allegan County, Michigan, over 400 Original Air-Cooled engines are in use for spraying and other farm purposes.

Thousands of these engines have been sold. They are giving the best services under the most trying conditions. N. M. Stark & Co., Des Moines, Iowa, have 15 standard concrete mixers all equipped with 5 H-P Original Air-Cooled engines. *There is no work that requires a better engine than operating sprayers and concrete mixers.* It is hard work all day with plenty of dirt to contend with. Drop us a letter or post card today for our latest catalogue.

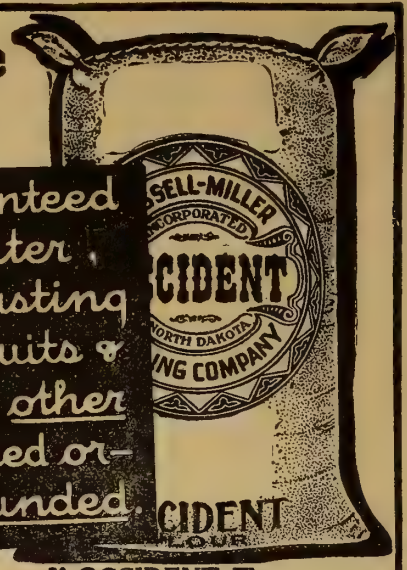


THE ORIGINAL GAS ENGINE CO.
Dept. D, Lansing, Mich.

Listen! A Power Concrete Mixer at Last for $27.50

ONE of the most labor-saving and DOLLAR-saving machines you can buy is a CONCRETE MIXER. We manufacture them in all sizes from a hand machine to the largest contractor's machine. Write today for catalog and prices.
FARMERS SUPPLY COMPANY Department B. JANESVILLE, IOWA.

This Guarantee is for You



Every Sack Guaranteed to give you whiter, lighter, better-tasting Bread, Cake, Biscuits & Pastry than any other flour you ever used or—Your Money Refunded.

We know OCCIDENT will make good in your kitchen.

It is a serious matter to put an unconditional money-back guarantee in every sack of flour.

If OCCIDENT Flour were like other flours we could not make such a guarantee. But OCCIDENT is different.

Won't you test one sack on our Money Back Guarantee?

The Guaranteed Flour

OCCIDENT

OCCIDENT Flour is made exclusively from First Choice of the most valuable bread wheats grown. The OCCIDENT way of washing and scouring the wheat and purifying the flour by wonderful modern machinery is the most thorough and costly in use in all the world.

Because of this extra quality and cleanliness OCCIDENT makes better bread and more loaves to every sack than any other flour.

Costs More—Worth It

OCCIDENT costs you only a few cents more than other flour, but it is the most economical flour you can bake with. The bread keeps moist, sweet and fresh longer than other bread. This saves work and fuel, for you can bake a double batch at a time and bake less often. It is very easy to prove this and we pay for the flour if you're not satisfied.

Send for Our Free Booklet, "Better Baking."

WITH THE EDITOR.

(Continued from last issue.)

While the children slept peacefully on their beds of hay in Mrs. Elder's big barn, their mothers sat in the front yard and, waiting, watched night blot out the day. At last a sound drifted in from the road and Lyddy Holbrooke gasped that it was "Tom's grays."

Mrs. Hope laid a firm hand on the younger woman's shoulder. "I reckon it might be Tom. And behind him and bound to beat him, is Jim Hope's new car. Listen! I face my man first, and I ain't scared of Jim and all the other fifteen just as long as we stand together: I believe in my soul, friends, that all any of 'em has needed for years is nothin' but to get shown."

A few moments later six men clambered out of Hope's new car. He alighted first and asking what all the fuss was about said his folks would start back in five minutes, the others could "gab all night" if they wanted to. Mrs. Hope stepped out from the group of women on the porch and moved down until she stood on a level with her husband's eyes:

"Jim," she began clearly, "you men folks didn't stop to read right those notes all of us left you. This is a strike of the Morgan county women against our working conditions, with me and Lyddy Holbrooke and Dixie Elder for strike committee, and all the rest of the women here to back us up. We're here, with all the children asleep in the Elder barn, on the only woman-run farm in Morgan county, to stay until the strike is won. If you men want to get a notion, by sight of eye, of why we've struck and what we want before we go back to work, you go through this house, that kitchen, the outbuildings and compare 'em with what us women on your man-run farms put up with. We've struck, Jim. We're through working with what you've give us to work with. Not till all of you—all of you—," she emphasized it slowly, "see your way to fixin' us up right do we go back to work."

Tom Holbrooke roared that it was "infernal nonsense," that the women couldn't strike, that "tomorrow's hayin' week."

"That," said Mrs. Hope, "is just why we struck today. We told you in our notes that you mean could try runnin' yourselves and the farm this week. We want you to work awhile with what we work with an' see how you like it. We want Tom Holbrooke to find out for himself, while he's tryin' to make coffee tomorrow on Lyddy's stove, why she's kep' askin' him for a new one, and why she says here tonight she'll never cook another meal on it. We want Dick Dorr to come in from the hot fields tomorrow at noon and start to cook over Bertha's stove in Bertha's kitchen and find out why she wants that window cut through for a breath of air where she's asked for five years to have it cut. We want Timothy Haskins and you, Jim, and Al Smith and most of you men, to find out, from carryin' in all the house water, why we've asked to have it piped in. We've each left you a list of things we want done to our houses, that the committee went over and decided was just, each man weighed accordin' to his means. Mrs. Elder's the only one here that ain't responsible to a man, and she's made us welcome here till the strike's ended. And, men folks, I want to tell you this: some of us is scared a little, and all of us wish we didn't have to do it, but it's come to a question of provin' that we're in dead earnest, and' not a woman goes back till all of us gets justice. Blame the man that holds out the longest, an' not his wife, if this don't get settled quick."

"Sadie," Hope drew his wife aside and began to talk. She shook off his arm gently, but with immense decision and answered him in open council.

"Not another promise goes, Jim. You promised last year as solemn as a man could promise that I'd get relieved from that awful outside pump this year. Not if you promised all night would I go back. The work's got to be started. And, men, in your talkin' over this thing, there's one thing that's comin' harder on most of you than carpenter work and new stoves and bread mixers and screens and piping, and that's money of our own. We're goin' to let you find out this week how much a woman is worth on a farm. Work it out; figure how big a hole we make in a farm's runnin' when we step out. And if you find any real stubborn brother among you, deal with him yourselves, an' don't put his case back on his woman; for we women are standing back to back: it's all of us, or none of us. Remember that."

A hush followed; husbands and wives looked into each other's eyes; no one spoke, and in silence the men went away. Hope, who was first to go, came back next evening before sunset to say he'd gotten his lesson; that work had been begun on the pipes; for her and the children to get ready to return home with him.

"I never said you was a bad man, Jim," his wife told him after a pause. "You've never stopped to realize; that's all. I never thought it would be hard work with you, after you saw I meant it—not that we couldn't live happy after it. Some of these women ain't sure of that, like I am. It took more courage for some of them than for me; you know that. What about Tom Holbrooke and Lyddy, Jim? And Dick Dorr and Bertha?"

Neither Holbrooke nor Dorr would listen to a thing, Hope admitted. Mrs. Hope laid a nervous hand upon her husband's arm and reminded him that the women had agreed to stand together; that he knew strike rules; that she could not go, and for him not to come again in this way, as it made it too hard.

"It's all up to you men; an' if all of you are decent but Tom an' Dick, it's up to you men still. Blame them an' not us, for as long as the sixteenth man holds out on you, all sixteen of us has got to hold out. You'd never stop sneerin' at me inside if I deserted now. Don't ask me again, Jim. It's up to you men."

"How long does Dixie Elder calculate to keep you?" Hope asked coolly. His wife laughed.

"You tell this to Tom and Dick—tell it to all of them. Have you ever heard of Mrs. Elder's jams and jellies that she sells, home-put-up, in New York, and never enough? It's a grand fruit year, and she got busy last week and's got orders enough for every bit she can put up with our help, and she has it figured out so we get paid for our time and have a little left over from our board. You tell Tom Holbrooke an' Dick Dorr that Lyddy and Bertha can hire out to Dixie Elder for the rest of the summer puttin' up fruit, an' will as long as they stay here, with more pocket money at the end of the season than ever they had at home."

Other men besides Jim Hope tried to coax their wives home, but "there were two words these farmers' wives knew, 'solidarity' and 'scab,' and their reverence for the one and their scorn for the other were so great as to preclude extended argument." At last all the men but Tom Holbrooke came to their senses. The evening Hope and Haskins came over to know where Bertha Dorr wanted the window cut, Lyddy Holbrooke asked Jim Hope to drive her over to the farm. Hope hesitated and tried to dissuade her. "If you'll drive me over," she repeated, "the time's come for Tom's and my talk—it's nothin' but Tom and me now; and if you want to get word to your men tonight—why, the strike's ended." Hope told her he would drive her over—to himself he added that he would not drive back until he knew that Tom Holbrooke was not doing murder.

When Hope returned to the Elder farm, all the women and children but his own, who were waiting for him, were gone. In answer to the unspoken question of his wife and Mrs. Elder he said that though he had sat waiting for three hours all he knew was not much.

"I don't know what happened inside," said Hope. "All I know is what she said as she got out and walked up to Holbrooke where he was standin' smokin' in the yard. 'Tom,' she said, 'I've come back tonight to tell you in words you'll never forget as long as you live why Ellen killed herself and the three children she bore you. I found a poor little book she used to write in towards the last. 'Come in; you've got to listen to it tonight.' I sat by, then, for three hours, till she came out again," added Hope. "I've never seen a woman whiter faced. 'I'll stay here tonight,' she told me, 'an' tomorrow I'll send for the children. Tell Sadie I've won, but I've shamed a man.'"

"The shame of Tom Holbrooke," said Mrs. Hope dryly, "is liable to make for the pride of the rest of the Morgan county men. By the time Dick Dorr got through talking to us about Tom, he'd managed to sound like a good, generous man, an' maybe it'll work out that way with him an' Bertha. But Tom and Lyddy—"

"If ever," Hope interrupted, "I looked on the head of a family, I saw it in Lyddy Holbrooke tonight. I bet Tom ain't got a leg to stand on ever again. Not but what he had it all comin' to him. Well, pardner, let's get the kids and start."

Mrs. Hope looked up quickly; her lips parted and she shut them firmly. He had said it unconsciously, his old, long-disused honeymoon name for her. She believed he meant it; that was the keynote of the new life. They must stand together to right the wrong that

custom and carelessness had wrought upon their home. Suddenly Mrs. Hope's worn face flickered into a smile. This too was solidarity.

HOME AND HOMEMAKING.

THE COUNTRY BOY'S CREED.

I believe that the country which God made is more beautiful than the city which man made; that life out of doors and in touch with the earth is the natural life of man. I believe that work is work wherever we find it, but that work with nature is more inspiring than work with the most intricate machinery. I believe that the dignity of labor depends not on what you do, but on how you do it; that opportunity comes to a boy on the farm as often as to a boy in the city; that life is larger and freer and happier on the farm than in the town; that my success depends not upon my location, but upon myself—not upon my dreams, but upon what I actually do, not upon luck, but upon pluck. I believe in working when I work and in playing when I play and in giving and demanding a square deal in every act of life.—Edwin O. Grover.

A policy of prevention of fly birth is better than a constant fight with and against the myriads of flies sure to be present later in the season. The hordes of flies of midsummer are not only annoying, but are almost the best known medium for spreading disease. Prevent the midsummer millions by destroying the early few.

Flies delight to find piles of rubbish, refuse and manure, for these are the places and this is the sort of material

THE forty years of Montgomery Ward & Company's service to the American people has as its foundation stone this motto, *"Sincerity of Purpose."*

The founders of this great business have never departed one hair's breadth from this high plane of integrity.

In the many millions of transactions with many millions of people not a single case of real dissatisfaction has been known to remain in question.

This house regards it a favor to be told of an instance where a customer has not felt that he or she has been thoroughly pleased with the goods bought from them.

This policy and purpose is still the guiding star of the institution after forty years of testing its worth.

If you trade with us you must be satisfied with your purchases. If anything you order does not wholly and fully meet with your approval we insist on your returning the goods and we pay all the expenses.

Is not this principle the world's greatest example of commercial sincerity? Is there any higher basis on which we can ask you to look over the wonderful bargains in the new big catalogue we have issued? Why not get a copy today? Simply write a note and say, "I want one of your 1913 catalogues. Send it to me without cost or obligation." And the next mail will bring it to you. Address Dept. U 17.

MAGIC FISH LURE!

Best bait for attracting all kinds of fish ever discovered. It sure does get 'em! Seems as though they just can't keep away from it. Will keep you busy hauling in the finny beauties. Makes fishing a REAL pleasure. Use Magic Fish Lure and you'll catch a big string every time while the other fellows go home empty-handed marveling at your "luck." Good any season. Won't spoil. Not unlawful to use. Send 25c for box containing enough for 500 baits. Money back if not satisfied. Valuable catalog sent FREE. Write for it today.

Lotz Bros., 199 N. Main St., St. Louis, Mo.

in which they lay their eggs. All material of this sort should be cleaned up before the first flies arrive and should be kept clear all summer. If any refuse, garbage or manure accumulates about the house, outbuildings or barns it is in this way the eggs are laid and the maggots hatch, and on this they feed. The accumulation of a few days, helps to breed flies and if it is not cleaned up for three weeks a whole brood will have time to hatch, pupate, and develop into adult flies. Prevent the formation of the usual breeding places and much more will be accomplished than by a campaign of "swatting" later.

To completely eradicate the fly pest a concerted campaign against this filthy insect must be begun at once. Four simple rules will help in this work:

First, remove, destroy, clean and disinfect all garbage, manure heaps, outhouses, etc. Remember it is in such places as these that the fly is hatched; this is where he feeds on animal and human feces and where he comes from when he goes into our houses, scattering filth and germs of typhoid or other diseases on our food or whatever he lights upon or walks across.

Second, use covered galvanized iron garbage cans and keep them closed as well as disinfected with crude carbolic acid or chloride of lime.

Third, screen the house, both doors and windows. Keep the flies from gaining an entrance.

Fourth, catch any stragglers that may accidentally get into the house by the use of traps or sticky flypaper.

Such a united campaign, rigidly carried out, would do much toward eradicating the fly and with the fly some of our worst diseases.

A SMILE.

Bobby had just fallen from a chair and was crying at the top of his lungs. "Why, Bobby," said his mother, "I'd be ashamed to cry so if I were you; baby brother never cries when he falls down." "Well—boo-hoo!—I ain't a-crying 'cause I fell down; I'm crying 'cause it hurt."

HEALTH AND BEAUTY.

For the little hacking cough that keeps the household awake at night bind a cloth wrung out of quite cold water around the throat and over this pin a dry cloth. One application is usually enough, but if not, more than twice wetting the cloth will not be required.

To keep the finger nails clean when polishing the stove put lard underneath the edge and around the nails, and the blacking will not disfigure them.

A good camphorated tooth powder is made from precipitated chalk, six drams; orris root, two drams; powdered camphor, one-third dram.

Relief may often be obtained when suffering with sick headache by holding the head over a basin and pouring a stream of very cold water on the back of the neck.

A little lemon juice upon retiring at night, a good facial bath in buttermilk allowed to remain on the skin for at least ten minutes, the inner rind of a cucumber rubbed over the entire face at least once a day—these are the weapons with which the girl who freckles or tans is fighting off her enemies.

When the hair begins falling out by reason of dandruff try shampooing without soap, says a writer. Beat two egg yolks in lime water, massage well into scalp, wash out with warm water and finish with a rinse of cold water to avoid taking cold.

THE DANDELION.

You may look in forty cook books in succession and not find the mention of dandelions, or at the most but some brief half or quarter of a sentence devoted to these superlatively fine greens. Even to Miss Parloa, who, according to all the traditions of the section of the world she inhabits, should have been brought up on a daily ration of these for a brief period of the spring makes no mention of them in her book on the preparation of vegetables.

For tonic properties and as a purifier of the system the dandelion is unequaled. We have a highly reputable doctor's statement that "the dandelion contains potassium salts and iron, which helps to make the blood more alkaline in action, and thus to eliminate poisons from the system. It is particularly valuable in the spring of the year—the only time when it is tender enough to use, in fact, because of this quality as a cleanser. It may be cooked by stewing with pork and season, draining, chopping together till fine, and serving with vinegar.—Jane Eddington.

LITTLE HELPS BY THE WAY.

It's faith in our own selves that makes
Our faith in others strong;
He's not a full and rounded man
Who thinks the world all wrong.

Don't look for flaws as you go through life,
And even when you find them,
'Tis wise and kind to be somewhat blind, and
Look for the virtues behind them.

Come up, April, through the valley,
In your robes of beauty drest,
Come, and wake your flow'ry children
From the wintry beds of rest.
—Phoebe Cary.

THE YOUNG FOLKS

SPECIAL NOTICE.

For the summer months we are going to use a new plan, instead of publishing the Roll of Honor, as our department will not be large enough to print such big lists of names.

So for a few months we will award three prizes a week. First prize, twenty-five cents; second prize, silver badge; third prize, pansy badge—for the three best literary efforts received that week.

Be sure to sign full address and age, and to write on one side of the paper only; and do not copy anyone's verses or stories, but make yours up yourself. Age limit, 21 years; all under that age are welcome.

HOW I GOT OUT OF THE SHAFT.

On my seventh birthday my aunt gave me a little writing book which had a place for a pencil. I always thought a great deal of the book.

One day my mother was very busy, so she told me to go and play. I called my dog, Ring, to come with me. We went into the pasture to play.

We stayed so late that my mother began to miss me. She called and called, but I did not answer. She waited an hour, but still I didn't come. She waited for a while to think.

She then went down to the gate, and there she met Mr. Harms. She told him about my long absence, but he only thought I was asleep. But I never returned, and so soon the whole neighborhood came out to hunt for me.

At last Ring bounded into the room with a piece of paper tied around his neck. Mr. Harms took it off Ring's neck, and read the following: "O, mother! come to me. I am in a big hole in the pasture."

Now the people went to the pasture, up to the hole, and lifted me out.

Now I will tell how I came to be in the shaft. In the pasture I saw a large hole, and I sat down beside it to see how deep it was. I lost my balance and fell in. I tried hard to get out, but I could not.

Ring saw me fall in and he pulled on my dress sleeve trying to help me, but the sod gave way, and he, too, fell in. I called as loud as I could for help, but there was no answer.

I cried myself to sleep, and when I awoke, I tried to think of some plan to get out. I happened to think of my writing book. I took my book out, and wrote a note on it. I then tied it around Ring's neck and helped him out. I told him to go home. He reached there, and you know the rest.—Edna Gingery, Neb., age 10.

My Bantams.
(Second Prize)

I have a little bantam hen and rooster. One day last summer I gave my little hen six eggs, and what do you think she did with them? She began to sit on them.

One day I went to feed her; I heard something say "peep! peep!" I looked under her, and there were six of the prettiest little chickens I ever saw. She was proud of her family.

My papa made them a nice little home to keep out the rain. I thought it would keep out the rats, too. But in this I was mistaken.

One night I heard a noise by the little henhouse, and we went to see what was the matter. When I looked in her little house, there were only five little chicks left. These grew up and were great pets.—Brown-eyed Rose, Ia., age 7.

A Picnic Day.
(Third Prize)

I will tell you about our trip to the woods. We went the fourth of May, last year. It was about twelve miles to the Des Moines River. We started early in the morning, and took dinner with us.

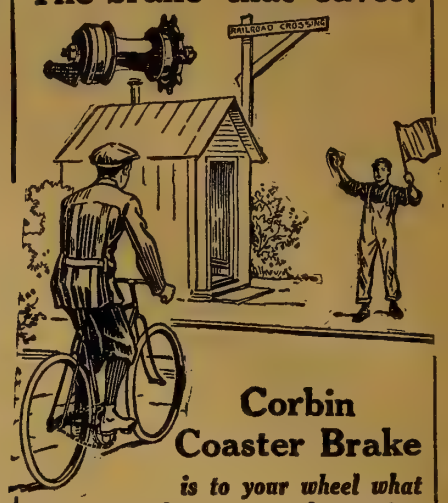
We dug up some pretty trees to plant around the house. After we had our dinner, we drove over the big bridge and went away down to the sand and picked up some shells.

We found some violets that we dug up and brought home and planted. There was only a little water in the river.

Maybe we will go again this year.—Bernadatte, Ia,, age 8.

Never start to lead the horse from his stall till you hold or fasten back the door. Doors have been known to swing to where they were not fastened open catching the horse's head, the animal pulling back and breaking his neck.

The brake that saves!



Corbin Coaster Brake

is to your wheel what the air brake is to a locomotive.

Fitted to your wheel at any bicycle repair shop. Gives you instant control, prevents accidents.

The two-speed model is an immense assistance when riding on up-grades and against strong head winds. Invaluable to elderly riders especially.

Corbin Brakes are operated solely by the pedal. Simple, strong and reliable.

THE INTERNATIONAL S. S. LESSON

3d Quar. Lesson III, Gen. 33: 1-15. April 20, 1913.

JACOB'S MEETING WITH ESAU—THE STORY.

There was a clash of feeling in the heart of Jacob as he approached Canaan after his exile in Padan-aram. There was joy! Before him lay the land "promised" to him—a land flowing with milk and honey. And he was making his entrance in good form. He returned not as he went out, with merely a staff in his hand. He came as a mighty sheik, with vast flocks and herds, and caravan of his followers. Nor were his thoughts wholly upon temporalities. He had learned many religious lessons in his banishment. He came with the intention of discharging well the priestly function inhering in his headship of the nation. He had some conception, however incomplete, of One who was to be born of his line. He had the Messianic hope. But all the brightness of Jacob's joy was darkened by one cloud of angry portent. He must needs meet the consequences of the sins of forty years ago—his unbrotherly action; his ambition, greed, and fraud—all these assumed a spectral form to haunt him. His wronged brother was approaching in hostile mien and force. To Jacob it seemed as if all was lost. What did it amount to—the sight of the promised land—if he must needs stain its border with his life's blood? And all the Messianic hopes and promises would perish in him. There is a touch of the domestic and affectionate spirit of the patriarch in his prayer. He fairly screens his eyes from sight of the impending slaughter of the innocents. In the extremity of his peril the strategic spirit of Jacob asserted itself. But the advance in character is manifest in that it took no ignoble form. There was nothing unworthy in the division of his caravan into two bands. And the presents sent in a series would be cumulative in their effect to soften the anger of his injured brother. Having done all that human tact could suggest, Jacob had recourse to prayer. Someone once asked a minister whether he believed in healing by faith or medicine. His very apt reply was: "I believe in healing by faith and medicine." Jacob used all the expedients he could think of to placate his brother, just as if everything depended upon himself. Then he went to prayer, just as if everything depended upon God.

HANDLING EARLY CHICKS.

To the Editor of The Homestead:

That the best money to be made in marketing poultry can be made by getting the early chicks on the first market, none who have tried it will hold the slightest doubt, but it requires different management from that of any other season.

In the first place, the condition of the weather is so vastly different from that of any other season, even than that a few weeks later, that special attention must be given the chicks, to prevent sudden changes from demoralizing your prospects, as their tender constitutions will not admit of sudden exposure.

Another item to be taken into consideration is that the eggs which produced the chicks at this season were so high priced, and a loss of the chicks after hatching not only means your labor thrown away, with that of the hen, or an incubator and the oil, but the value of eggs thus wasted adds considerable to the cost of production.

Again, early chicks are hatched almost exclusively by incubator, and the little fellows never are quite as strong and vigorous as those hatched by hen. This should behoove the poultry man who is expecting to market his early, high-priced chicks, to make thorough preparation for starting them right, the first provision being that of ample protection from the cold, damp weather.

During sudden changes in the temperature, the chicks must be handled accordingly. If they become chilled or damp, the influence seems to settle in the bowels, causing various disorders which, unless promptly checked, will result fatally in a very short time. The sure sign that something must be done for them, is a clogging of the excretion in and around the vent. When this occurs it is a certain indication that the little fellows have been neglected, either as to care or feed, sometimes both.

While it is a pretty delicate proposition to doctor small chicks, in a case like the above mentioned give from three to five drops of castor oil to each afflicted chick, to start the bowels freely and clean out the digestive system in general. At the same time, look carefully around and see if the little fellows haven't been eating foul feed of some kind, too much corn, or drinking filthy water, either of which would cause the trouble. Any of these, in connection with lice and mites on the chicks, soon will clean up a big flock of them.

Keep the chick coops or brooders clean and dry, and on warm, bright days turn the chicks where they can enjoy the sunlight and open air exercise. Avoid washy or sloppy feeds, as they are great bowel disturbers. Give a variety of small grain rations, such as millet, wheat, kaffir corn, etc., carefully guarding against any great amount of corn till the chicks are larger and more vigorous, when their digestion will be stronger and more able to convert it into available nutrition for the tissues of the body. A generous pinch of cayenne pepper in a mash of one part corn chop, one part cracked wheat and two parts bran, will prove highly beneficial, given twice a week. Where the chicks are confined, 10 per cent beef scraps and the same amount of cut clover or alfalfa meal should be added, while charcoal and grit should be kept where they can be reached by chicks at all times.

Subscriber.

W. C. Pace brought a dwarfed ear of corn into the Tribune office this morning that was raised last year on his small farm just north of Glenwood. It is indeed a freak and oddity in the way of an ear of corn. There is the main ear, which is perhaps four inches long and almost the same size in circumference as an ordinary ear of corn, and eight small ears growing out from the end and projecting downward. We will admit that it is something new to us in the way of a freak ear of corn. —Glenwood, (Iowa) Tribune.

"Can't-Sag" Gates Cost Less Last 5 Times as Long

I'll save you big money on your farm gates. My new catalog quotes such astonishingly low prices on CAN'T-SAG GATES AND GATE STEELS that *you simply can't afford to build another clumsy, all wood gate.* My FREIGHT PAID PRICES are half what others charge for short-lived steel, wire and gas pipe gates.

K-R-I-T

The K-r-i-t Farmer knows gasoline engines

That's why he bought a K-r-i-t. That's why there are four thousand K-r-i-t farmers whose names and addresses we can give you.

The K-r-i-t Motor was designed and built as it is, for the K-r-i-t farmer.

The K-r-i-t farmer knows what a motor must do to render service and be worth his investment.

He knows the sand, the mud, the hills, the hauls of his country—he knows that the motor is the heart, the lungs, the breath, in fact, the very life of every car.

The K-r-i-t Motor more than any other feature of the K-r-i-t is responsible for those four thousand K-r-i-t farmers.

Why the K-r-i-t Motor is the Farmer's Motor

Because the entire K-r-i-t power plant is assembled as a unit and the cylinders cast "en bloc", insuring a solid and rigid motor.

The pistons carry four compression rings and are lapped into the cylinders to insure perfect fit and maximum compression.

The crank shaft is drop forged from special steel with one and three-quarter inch ball bearings.

The connecting rod bearings are 50% over size thus avoiding excesssive wear.

The cam shaft is drop forged from special alloy steel. The crank case is cast from aluminum, increasing the strength but reducing the weight.

The entire bottom of crank case is easily removable for adjustment of connecting rod bearings.

The valves are enclosed and interchangeable and the valve tappets adjustable.

Motor is water cooled by thermo-syphon system aided by ball bearing fan; the motor is lubricated by splash feed from crank case with sight feed on the dash.

These are the more important mechanical features which make the K-r-i-t Motor sturdier, tougher, more durable and more powerful than any other motor of its rating in the world.

That's why the K-r-i-t Motor makes the K-r-i-t the farmer's car.

Let us tell you what four thousand farmers say of the K-r-i-t Motor, also let us bring the K-r-i-t out to your farm.

Make us prove what we say.

OUR FASHION DEPARTMENT.

ALL PATTERNS, 10 Cents Each.

THIS department is prepared especially for The Iowa Homestead. We can supply our readers with high-grade, perfect-fitting, seam-allowing patterns at 10 cents each, postage prepaid. Full directions for making, as well as the amount of material required, accompany each pattern. When ordering, all you have to do is to write your name and address plainly, tell us the correct number and size of each pattern you want and enclose 10 cents for each number. We agree to fill all orders promptly and guarantee safe delivery. Address all orders to The Iowa Homestead, Des Moines, Iowa.

5976 Boy's Blouse Suit.—This little suit has a sailor blouse with the regulation collar and shield, the latter being removable. The sleeves are nicely plaited at the wrist and the trousers are the usual bloomers finished at the knee with either legbands or elastics. Serge, cashmere or linen can be used to make this suit.

The pattern, No. 5976, is cut in sizes 6 to 12 years. Medium size requires 2⅝ yards of 44-inch material. Price of pattern, ten cents.

4715 Lady's Kimono.—This kimono can be made with either the bishop or flowing sleeves. It also can be made with either the square or round neck. Any of the pretty crepe materials may be used to make this kimono, with the trimming of contrasting material.

The pattern, No. 4715, is cut in sizes 32 to 44 inches bust measure. Medium size requires 7⅜ yards of 36-inch material, with 1 yard of 36-inch contrasting material. Price of pattern, ten cents.

6030 Lady's Petticoat.—This petticoat is cut in one piece and is especially desirable for embroidery. It is made with a straight lower edge.

The pattern, No. 6030, is cut in sizes 22 to 36 inches waist measure. Medium size requires 2¼ yards of 45-inch flouncing. Price of pattern, ten cents.

3696 Lady's Combination.—This combination consists of corset cover, drawers and petticoat. The petticoat can be finished with a ruffle of embroidery or of self materials as preferred. Longcloth or nainsook can be used to make this combination.

The pattern, No. 3696, is cut in sizes 32 to 46 inches bust measure. Medium size requires 2½ yards of 36-inch material, 5 yards of edging 6½ inches wide for the ruffle, 3¾ yards of narrow edging, 6½ yards of insertion, 3½ yards of beading and 4 yards of ribbon. Price of pattern, ten cents.

5643 Lady's Dress.—This dress closes at the front and is made with a six-gored skirt. A tuck at each shoulder in the front of the waist gives the necessary fulness. Linen or serge can be used to make this dress.

The pattern, No. 5643, is cut in sizes 32 to 42 inches bust measure. Medium size requires 6⅜ yards of 36-inch material. Price of pattern, ten cents.

VETERINARY MATTERS

PROFESSIONAL Veterinary advice through this department to regular subscribers only. We do not answer veterinary inquiries for the benefit of "neighbors." Parties desiring information will be required to send their names in full with their address. No question will be answered by mail unless accompanied by a fee of one dollar. In order that correct information may be given, the symptoms should be accurately described, stating of how long standing, together with color and age of animal, and what treatment, if any, has been resorted to. All veterinary inquiries should be addressed to this office

THOROUGHLY good and reliable veterinary remedies are advertised from time to time on these pages. If they were not good and reliable they could not appear in our paper. Our readers are requested to look them over. You may find here some remedy which will exactly fit your case.

SYMPTOMS AND TREATMENT.

TUMOR.

About a year ago my four-year-old horse got a bruise on one shoulder. This swelled quite badly and was soft to the touch. It was lanced by a veterinarian, but was sore and discharged pus for three weeks, after, but finally got well. Three weeks ago his shoulder got sore again in the same place. This time the enlargement is quite hard and sore.

A tumor has formed and should be cut out; then treat as a common wound until healed. If you do not care to have this done open into the center of the mass, evacuate the pus and then once daily pack the cavity full of oakum saturated in a mixture of equal parts of turpentine and raw linseed oil.

GARGET.

Have a five-year-old Jersey cow that will be fresh about July. She gives a little milk, but it is strong and we cannot churn butter from her cream; it simply comes to a thick foam. Her milk is stringy when first beginning to milk her. She looks well and eats well. She is fed corn fodder three times a day with red clover once a day. About four times a week she receives cow beets and twice a week a little bran and corn.

The cow's udder appears to be ruined and she should be kept away from other cows, as such diseases are apt to prove contagious. Rub the udder twice daily with camphorated oil and strip away all fluid. She will give more trouble when she calves, so it is best to sell such cows to the butcher or dealer in canner cows. It never pays to retain them for dairying.

LAMENESS.

Have a filly coming two years old in June that was cut in the wire last November, the wound being in her breast at the upper joint of the right leg. It healed up except for a small bunch. However, she can't use the leg at all and when she walks will go on three legs. She is in good condition.

This is a serious case and one that should be attended to by the local graduate veterinarian. He may find the cause of the acute lameness, which suggests a broken bone, or diseased bone. If you can not employ expert help clip the hair from the entire affected part and blister several times with cerate of cantharides, at intervals of three or four weeks.

LUMP JAW.

A red yearling bull calf has a lump on his left jaw, but we are unable to say how long it has been there, as we bought him at a sale five weeks ago. This lump is as big as a boy's fist. A week ago we cut it open with a knife and found it contained bloody matter. It healed up, but is just like it was before.

The lump no doubt constitutes lump jaw, being due to the ray fungus (actinomyces). It would be best to have the entire mass cut out by a veterinarian who will cauterize the wound. If the bones are not badly involved, healing may then take place. If you cannot employ a veterinarian cut into the center of the mass and insert a half dram of powdered corrosive sublimate wrapped up in wet cotton batting to make a small ball. Keep this in place by packing with oakum or cotton. It will cause sloughing of the parts, after a time, and healing may then take place.

RETAINED AFTERBIRTH.

Two of my cows did not clean after calving and I had it done, but would like to know what to use as a wash, as there is quite a little fever and some odor. What is the cause of this trouble and can it be prevented? These cows have had cob meal, two parts; bran, one part, and what corn fodder they would eat, and were in good flesh at calving time.

Use a gallon or two of lukewarm 1-5,000 solution of permanganate of potash to syringe out the vagina once daily until abnormal discharge subsides. The trouble indicates lack of thrift and health in the cows. Sometimes this is due to lack of exercise and inadequate feeding, or lack

of succulent and laxative feed. Make the cows take plenty of exercise during pregnancy and feed silage, bran and oilmeal, or roots and there should be no trouble. It is taken for granted that the cattle have been tested and found free from tuberculosis. That disease often causes retention.

SOUNDNESS.

Please tell me how to determine if a mare is sound and also how to tell her age and whether her eye sight is good or not.

We cannot answer such a wide question here. It would take columns of space to discuss such a question. The information may be learned from a book on veterinary medicine; but the best way to decide a matter of soundness is to have an expert examination made by a graduate veterinarian.

FEEDING A JACK.

I have a jack and am a little puzzled to know whether I feed him too heavy or not. I give him one and one-half gallons of oats, one-half gallon of bran, four eggs and wild hay each day. He has a yard for exercise. This jack is four years old. Some days he acts all right and is quick in his service and other days he has no motion.

Substitute mixed clover and timothy hay for the wild hay; reduce the amount of bran fed and add a few ears of corn at noon. Make the jack take plenty of exercise every day, but do not let him become wet. Do the teasing with a horse.

STIFFNESS.

Have a twenty-year-old mare that seems stiff when she gets up after lying down. She lies down every day, sometimes for half a day at a time and acts like her back hurt her when she tries to get up. She has been fed corn, oats and hay; also a teaspoonful of pulverized rosin for two or three weeks, but it does not seem to do her any good.

Stop giving the rosin; it will do no good and possibly may cause harm. Give the old mare a box stall in stable and try putting slings under her to prevent her from lying down and to give her support. At her age there is little likelihood that she will permanently recover.

WORMS.

What causes colts or horses to chew at boards and planks with which they come in contact, and what is the remedy for this? They have been fed salt, oats, corn and hay.

Indigestion and depraved appetite are present and worms are the common cause. Treat for same by giving half to two ounces of turpentine in four to sixteen ounces of raw linseed oil, at one dose, according to size and age of animal. Follow with the worm powders so often prescribed here.

HAIRLESS PIGS.

Can you tell me what causes healthy sows to have pigs without a particle of hair on them? They go their full time and from two to eight days over.

In such instances it has been found that lack of lime in the feed and water has caused the hairless condition of the pigs. They lack perfect development. The ration should be balanced and complete, a mixture and variety of feeds being allowed and the sow permitted free access to slaked lime, wood ashes and charcoal. It is well to include in the feed digester tankage, say at rate of 10 per cent of the other feeds offered, and also to add precipitated phosphate of lime or ground bone. In the Canadian northwest lime added to the drinking water ended the trouble.

FARCY.

Will you please give recipe or treatment for button farcy in horses?

The disease is the skin form of glanders and there is a state law against hiding its presence or treating the disease. If you know of a case it is your duty to immediately notify the local health officer and he the state veterinarian who will see to the destruction of the animal, quarantine and disinfection of the stable. As glanders-farcy is not only incurable and fatal to horses, but communicable and fatal to man, the danger of treating or harboring the disease can be understood.

DEAFNESS.

(1) This spring I was hauling cane with a five-year-old team and shot over their heads with a shotgun. They have been totally deaf ever since. Is there any cure? (2) Also have a cow three years old that is weak in the knees and has been in that condition since the first of November. She has been running in the wheat pasture. She breathes hard. What is her trouble?

(1) We know of no cure. Possibly hearing may return in time. (2) Have her tested with tuberculin as tuberculosis is the most likely cause of condition described. Meanwhile keep her up and feed generously.

Horse-Training and Colt-Breaking
Successfully Taught by Mail. Book Free!

Prof. Jesse Beery, King of Horse-Tamers and Trainers, Will Send Horse-Trainers' Prospectus FREE

If you love horses and are ambitious to make more money, you will be intensely interested in the remarkable Horse-Trainers' Prospectus, which tells all about it. After a wonderful career as a professional horse-trainer, which brought him fame and fortune, Prof. Jesse Beery, acknowledged to be the World's Master Horseman, is devoting his time to teaching his noble profession to a few carefully chosen pupils, entirely by correspondence.

PROF. JESSE BEERY
World's Master Horseman

$1,200 to $3,000 a Year at Home or Traveling

Hundreds of Beery's graduates are making all kinds of money training horses, breaking colts, teaching horses to drive without bridle or lines. Owners gladly pay $15 to $25 a head to have their horses tamed, trained, cured of bad habits, or to have green colts properly broken. A good trainer can always keep his stable full of horses.

Is Your Horse Vicious, Tricky, Balky?

You can cure any horse of bad habits and actually double its value by this wonderful system. Everywhere are unruly, tricky, balky, dangerous horses—"not worth the powder to blow them up." These horses, by the Beery Methods, can quickly be made safe, useful, valuable.

Ignorance of the simple principles discovered by Prof. Beery has cost the lives of thousands. He tells his pupils the priceless secrets of conquering the most vicious "man-killers"—enables them to actually **duplicate** his most marvelous feats.

The Beery System Making Money for Thousands

Prof. Beery's graduates in all parts of the world are making money training horses, breaking colts, giving exhibitions, buying up cast-off "tricksters" and "man-killers," taming and training them **and re-selling at high prices.** For example, take the case of Emmett White, Kalona, Iowa, now a prosperous professional Horse-Trainer. Mr. White says: "I wouldn't take $500 for what you have taught me. You may judge of my success when I tell you that I have been able to buy **a home and an automobile** solely through earnings from training horses as taught by your excellent methods." A. L. Dickinson, Friendship, N. Y., writes: "I am working a pair of horses that cleaned out several men. I got them for $110, gave them a few lessons and have been offered $400 for the pair."

CLIP THE COUPON, sign and mail at once for the Free Book, written by a man who won fame and fortune, thrilling vast audiences everywhere, by marvelous skill in training horses and man-killing stallions. Send the coupon today. Tell him about your horse. (44)

WHAT ONE ACRE WILL DO.

more in cash than did your twenty acres," said I, "and best of all, the land is in better condition than it was when I started in last spring, a thing that you can't say about your cotton land."

My neighbor will join me next year and that branch bottom land of his will go into some early maturing vegetable crop that will be out of the way in time to plant corn and some soil-building legume, such as peanuts or cowpeas. The idea of crop diversification is gaining ground. You can tell a diversified farm as far as you can see it. Prosperity is shown in the fences, in the farm stock, in the dwelling and in the faces of the people.

Because of his success with the one-acre experiment and of the specific manner in which his entire place is cultivated, Mr. Cash's property is called by his Arkansas neighbors the "Model Farm," and is an object of interest to a great many visitors. Having access not only to the local market of Camden, but to the markets at Texarkana, Shreveport, Pine Bluff, Little Rock, and Memphis, Mr Cash is able to dispose of his produce promptly and at good prices. His earliest garden stuff begins to come on in April, while new potatoes in April and strawberries in May add to the early receipts of his farm. Canteloupe, watermelons, sweet potatoes, sugar cane, turnips and fall feeds and grains combine to make him an advocate of diversified farming rather than of cotton growing, to which the great majority of his neighbors have all too long confined their attention almost exclusively. Mr. Cash believes that the day is coming, and is not far distant, when not only in the South, but throughout the entire country, men will abandon one-crop farming and pay more attention to diversified farming, with better and surer financial results.

Don't Have a Blind One
"VISIO"

An Absolute Cure for Moon Blindness
(Opthalmia), Cataract and Conjunctivitis
Shying horses all suffer from diseased eyes.

"Visio" will convince any horse owner that it will absolutely cure defects of the eye, irrespective of the length of time the animal has been afflicted. No matter how many doctors have tried and failed, use "VISIO" under our GUARANTEE to refund money if it does not cure.

Dr. B. J. Kendall Co., Enosburg Falls, Vt.

THIS department is edited by a gentleman who has long made the management of sheep a special study. He will be pleased to answer, in this department, all questions of general interest relating to the care of the flock and other kindred topics. Address inquiries, communications, etc., in relation to sheep, to this office.

HANDLING THE LAMB CROP

To the Editor of The Homestead:

Lambs are the most fragile of all young farm animals. See that they get the attention necessary to give them a good start. Keep a close watch of the smaller and weaker lambs, else the larger and stronger ones will cheat them out of their share of nourishment from the mother. Above all else, don't allow the lambs to get chilled by rain or sleet. The little fellows rarely ever survive one thorough chilling at this tender age.

Remember, any disorder of the ewes will be partly transmitted to their lambs through the nourishment they take from the mothers. Let the rations of the suckling ewes, both grain and roughage, be clean, wholesome and nourishing. Getting the lambs properly started to sucking often is a serious problem, and much depends on this part of the handling of the lamb crop. Where a ewe refuses to own her lamb, she should be held till the little fellow secures a taste of the milk, which will make him more ambitious, and is apt to reconcile the ewe to its nursing.

Where there still seems to be a likelihood of the ewe refusing to allow her lamb to suck, one should have a close stall and stanchion in which to confine her, turning the lamb in with her, first seeing that it gets some nourishment. This will prevent the mother from fighting it, and after it has nursed a few times, she probably will own it, and it will be safe to turn it out with her.

Twin or triplet lambs will require the closest attention, even after they both take nourishment from the mother sheep, as one of them is pretty sure to get the most of the milk, cheating the other. As a rule, it is advisable to put one of the twins on a bottle, or with another ewe that has lost her lamb, since one is not only apt to get the greater part of the milk, but the ewe very seldom furnishes sufficient milk to support two lambs properly.

Where a ewe loses her lamb, one can prevent her udder from caking, and at the same time do another profitable turn by taking her dead lamb, removing its skin, slipping it over the body of another lamb, and placing it in the stall with the ewe. The scent of her own lamb's hide will deceive her into allowing the other lamb to nurse. If one can practice this where some ewe has died and left an orphan lamb, or where some ewe has twins or triplets, it will prove an excellent plan. After the ewe has allowed the wrapped lamb to nurse a few times, the skin should be removed, when she generally will own it and permit it to suckle. —M. Coverdell, Cole county, Mo.

LOSSES FROM LIGHTNING.

Although its menacing effects could be easily and cheaply diminished, lightning now destroys more property in this country than do matches, sparks and kerosene together. Of the 229 fires reported by the state fire marshal for the last half of 1912, but three were on buildings which had been rodded. The loss of the three rodded buildings was $4,105, whereas the 226 fires in or on unrodded buildings amounted to $334,088. Upon investigation, it was found that the three fires on rodded buildings could be readily explained because of defective rodding.

The following recommendations for the installation of lightning rods have been given by T. M. Purtell, fire marshal of Wisconsin:

Materials.—Use a copper cable rod or one of galvanized iron or steel. Iron is not as good a conductor as copper, but dissipates the energy of the flash better and is less likely to cause side flashes. Copper cables should weigh three ounces or more per lineal foot. All points should be tipped with non-corroding material.

Location.—Rods should extend from moist earth over the building to moist earth on the other side. Placing rods at diagonally opposite corners is best. On the building rods should be run along the ridge. Avoid placing rods near interior piping.

Points.—All chimneys, cupolas and ventilators should have separate points. Points should not be more than twenty feet apart. A rod should run direct from an outside chimney to the ground.

Metal Work.—Roof, gutters, hay carriers and all other exterior metal work should be connected with the rods or grounded separately.

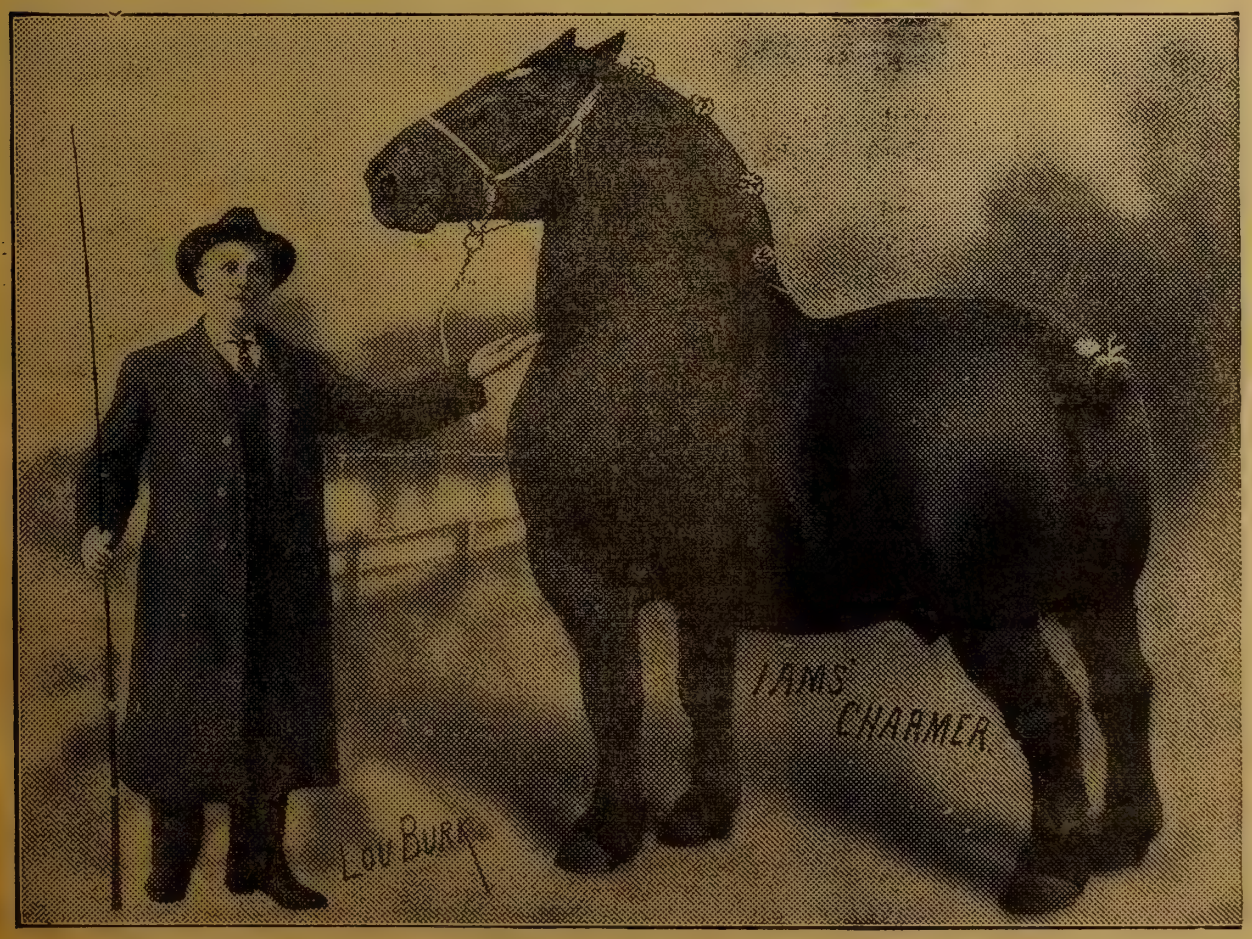
Fastenings.—Rods should be fastened with clips of the same material as the rod, and held at a distance of one inch or more from the roof to prevent leaves from lodging. Never use so-called insulators.

Grounding.—All rods should be grounded to a depth of not less than eight feet; more, if necessary to reach permanent moisture. Lightning seeks underground water beds. You can never overdo the matter of grounding. A copper or steel ground plate is helpful.

Wire Fences.—Grounding wire fences at every sixth post would prevent the heavy loss of live stock.

Makes.—There are about twenty good makes of rods. We cannot and do not recommend any particular make.

Ask your neighbor to subscribe to The Homestead.



Frank Iams, St. Paul, Neb., and one of his imported stallions—the type he is selling at prices which he claims save the buyer from $800 to $1,000 each. Iams calls special attention to the fact that these horses have been inspected by veterinarians of France as well as veterinarians of the United States and his certificates are stamped O. K. by the government.

Have You a Cook Stove and a Watering Trough?

Then You Can Re-temper Acme Shares

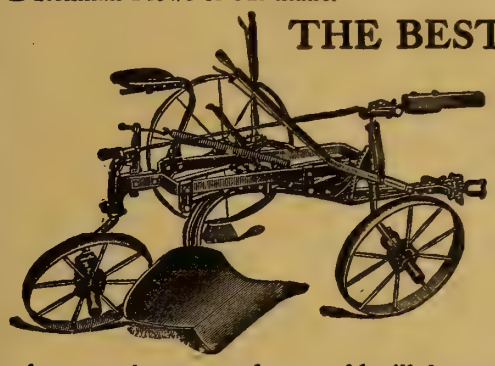
To keep a hard, sharp, keen cutting plow share, you must have one that can be re-tempered after sharpening.

Other plow manufacturers **warn** you **not to re-temper** their shares for fear of breaking them. That means you must plow with **soft, dull** shares after the first re-sharpening.

Anyone Can Re-temper Acme Guaranteed Shares

You can re-temper **Acme Steel Shares** any number of times after re-sharpening, and we guarantee that they will not break either in the process or in the field. Keep them **hard, sharp** and with a "razor edge" their entire life. We take all the risk—you take none—the blacksmith takes none.

Acme Steel Shares are made by our **own** process in our **own** factory. They are used only on **Best Ever** and other Flying Dutchman Plows of our make.



THE BEST EVER PLOW

with **Acme Steel Shares** is the most economical for you to own. It is the strongest plow made—the lightest draft plow. It will turn more acres per day, with less wear and tear on the team than any other plow.

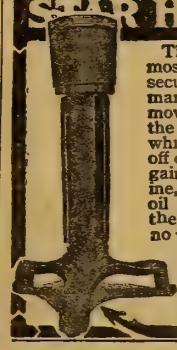
If **Best Ever** plows were equipped with ordinary 3-ply shares, used by other manufacturers—they would still be superior to any other plow on the market—but when you add to their many other advantages that of **Acme Guaranteed Shares,** you will agree with us that the equal of the **Best Ever** has never been produced.

Your Flying Dutchman Implement Dealer sells the BEST EVER. Look him up. Write us for our FREE BOOKLETS. DEPT. NO. 11.

MOLINE PLOW CO., Moline, Illinois

OR NEAREST BRANCH HOUSE

STAR HOG OILER



The "Star" Hog Oiler is the most simply constructed, most securely made machine on the market. It will positively remove lice and mange, keeping the herd in thrifty condition which is a big factor in warding off disease. The hogs rub against the panels of the machine, which permits just enough oil to come in contact with their skin—there's absolutely no waste. Every post is guaranteed and the small cost makes it imperative that you get full facts right now.

FIELD NOTES.

J. G. Westrope, Harlan, Iowa, offers some good young Scotch and Scotch-topped bulls for sale on page 46.

H. A. Myers, Red Oak, Iowa, is offering Scotch Collie puppies for sale. His advertisement appears on page 22 of this issue.

Dewey Ohloff, Postville, Iowa, is offering Fox Terrier puppies for sale cheap in his advertisement appearing on page 22 of this issue.

The illustration in the Burmeister advertisement on page 8 compares the old style cultivator shovels with the improved sort made and offered for sale by Chas. Burmeister, Sutherland, Iowa. Note the claims made for them. For booklet and prices write to the address named above.

The advertisement of the Star hog oiler appears on page 37. This is one of the simplest devices yet perfected for the automatic destruction of lice and mange. It is sold at a low cost and under a liberal guarantee. For prices and other facts address Henry White, Dept. 50, Tribune, Ill.

Standard cream separators are advertised on page 27. A very complete description together with accurate illustrations of these separators may be found in the book entitled "It Skims While You Milk." The book also contains many testimonials from farmers and dairymen who have given it extended trials. This book may be had free of cost by writing to Standard Cream Separator Co., P. O. Box 317, Milwaukee, Wis.

The Keystone potato planter is advertised on page 8. This is a planter which has been in the market for many years and one which has given perfect satisfaction under all conditions. The potato planter is a necessary implement on every farm on which the raising of potatoes takes place. It is a most economical machine and one which saves a great deal of labor at a time when labor is valuable. For catalog and price list address A. J. Platt, Sterling, Ill.

A. Latimer Wilson, Creston, Iowa, reports the sale of his very best imported Percheron three-year-old stallion to Meinecke Bros., Jamaica, Iowa. He writes: 'This horse is one of the best, flashiest going colts that I have sold this year and the community of Jamaica should certainly be congratulated in getting the best horse out of my barns." Mr. Wilson reports that he has plenty of home-bred anl imported horses left for his summer trade and means to keep his stables full all summer.

Percheron stallions sired by imported horses and out of imported mares, all good, young ages, blacks and grays, with the best of individuality and ready for immediate service, being thoroughly conditioned, are for sale by W. J. Butler, Ottawa, Ill., whose advertisement appears elsewhere. These horses will be priced very low, quality considered, as Mr. Butler carries on his business with the minimum of expense and is therefore enabled to make buyers very close figures on his horses. He will treat you right.

R. T. Thornton, manager of the Kansas City sale of Hereford cattle to be held May 6th, writes: "Two more polled bulls have been added to the sale list from the herd of Mr. E. L. Farmer, Eagleville, Mo. Duke is long two years old, sired by Polled Admiral 2d, the great breeding bull owned by J. W. Wyant, Blythedale, Mo. The other bull is a long yearling named Cardinal, sired by Action, he by Admiral 2d, dam Rosebud. Mr. Farmer writes that these are splendid bulls, with good smooth hinds and carry eight polled crosses." Note page 41 for advertisement of the sale.

H. J. Hughes, Irenton, Mo., who owns a small, but select herd of Short-horn cattle recently purchased of C. S. Curtis, Ames, Iowa, a young roan Short-horn bull for a future herd header. He was got by Count Avon, champion of the 1912 International Show, he by Avondale the great son of Whitehall Sultan. The dam of this calf was got by Imp. Red Knight that did such excellent service in the Clarke herd and she traces to Cruickshank's Jessica tribe. Mr. Hughes has secured a calf with excellent lines, good quarters and exceptionally good over crops and loin. Mr. Hughes has not been active in Short-horn circles for some time owing to the press of other business, but has been keeping his herd in good condition and will from now on be able to devote more time to the farm and the herd.

On page 22 of this issue of The Homestead is the advertisement of Mrs. A. N. Bonnett, Birmingham, Iowa, offering Scotch Collie puppies for sale. They are sable and white in color. Pedigrees will be furnished free.

C. G. Good, Ogden, Iowa, who has during the past few years attained considerable prominence as an importer of draft horses, has started for Europe with the expectation of again bringing over something of a high order of excellence. He informs us that he expects to return about the first of June, when further announcement will be made.

Kreischer's Herefords.

E. W. Kreischer, Mt. Vernon, Iowa, has a few extra good young bulls sired by Young Albany and Dale's Eclipse. One of these is an exceptionally good calf and will develop into a show bull. Some cows and heifers safe in calf to Young Albany (recently sold for $500) will be priced worth the money. Mr. Kreischer has an excellent herd of Herefords and would be pleased to hear from any of our readers. When writing kindly mention The Homestead.

Rambler Motor Cars.

The big advertisement on page 7 illustrates one of the imported and more recently perfected features of the Rambler. It has to do with that portion of the engine which provides the starting device and the electric lighting system. The whole advertisement makes good reading, but it does not tell one-tenth part of the important story of the Rambler cars. A beautifully illustrated catalog together with a handsome four-color reproduction of an oil painting will be sent free to any reader of this paper who writes Thomas B. Jeffery Co., Kenosha, Wis.

Cars for Farmers.

The advertisement of the K-R-I-T car which appears on page 34 contains some facts which farmers and prospective buyers will find to be of interest. They refer to th K-R-I-T engine, as the engine is the critical and all important part of the automobile. Our readers will at once realize that it is necessary to obtain an engine that is right at every possible point. Proof that the K-R-I-T possess all necessary advantages may be obtained in the handsomely illustrated circular for which address Krit Motor Co., 1660 Grand Blvd., Detroit, Mich.

Gate Sense.

There is no one thing about the farm that has been as unsatisfactory as an old wide farm gate. Generally it has had a man-killing weight that made it a dread of everyone who was obliged to operate it. With all its weight and unwieldiness it lacked qualities that made it fulfil the purpose for which it was made. It is a pleasure to turn to the little advertisement on page 33 and see an illustration of a gate, which, while it is light, easily handled and durable affords also perfect protection. It is horse high, bull strong and hog tight and a boy may handle it. It is sold on a thirty days' trial and with freight charges prepaid. Conditions of this offer may be learned by writing to Alvin V. Rowe, Rowe Mfg. Co., 476 Adams St., Galesburg, Ill.

Long Sam is for Sale.

One of the best sons of Thos. A. Shattuck's famous breeding boar, Sampson, is now for sale by Joshua Morgan, Hardy, Neb. This boar is called Long Sam, and the name is surely appropriate. He is an extra long, heavy-boned boar and of good size. He is out of the great breeding sow, Big Standard that sold in the Shattuck sale the fall of 1911 for $465. Long Sam is a full brother to Williams Bros., noted boar Big Sampson. Big Sampson is rated as one of the very best big boars in Iowa, and priced well up in four figures. Long Sam can be bought for $100 and the first check for that amount takes him. The writer does not hesitate to recommend this boar at this price, or quite a little more, as we know how he breeds, and we know that any breeder looking for a little more bone and stretch can use this boar. Mr. Morgan has a big lot of stuff by him and his gilts are so very fine that he plans on keeping practically an entire sow herd sired by this boar. This is not a fancy hog, though he is pretty smooth, but as he is extra long, he lacks quite a little of being a show boar. The boar is fully guaranteed and sold for no fault. Write today and mention this paper.

Breeders' Combination Hereford Sale.

The sale of Hereford cattle to be held at Kansas City, Mo., on May 6th will be one of the good sales of the year to attend if in the market for bulls or females as the fifty bulls and forty females come from representative herds. We herewith give short statement from each contributor regarding his offering which shows the appreciation these breeders have of the stock they are sending to the sale: Gudgell & Simpson.—As good a lot of heifers as I ever put in a sale, "Nuf sed." E. E. Wall & Son.—I am sending to your sale fifteen bulls and one cow that I believe will be a credit to me, to the sale and to the Hereford breed. Z. T. Kinsell.—I am sending Hereford I am proud of. Samuel Drybread.—I wish I could breed them all like the fifteen bulls I am sending to this sale. John Schmitt.—I am sending only very best bulls. O. S. Gibbons.—The kind that pushes the average up. Kansas Agricultural College.—Four useful cows, three with calves at foot. J. L. McGinnis.—Six splendid bulls with quality and size. R. M. Field & Son.—Two good cows in calf by Polled Prince 5th and good two-year-old polled bulls carrying twelve polled crosses. E. W. Elliott.—I am sending four of my best cows in calf to Advertiser 10th. Ed Walton.—My three polled bulls are high class by a great polled sire and out of polled dams. E. D. Gorman.—I am sending the kind to advertise my herd. The sale will start at ten a. m. promptly in the fine stock sale pavilion as the number to be sold in one day is large. For more complete information address R. T. Thornton, 1309 E. 15th St., Kansas City, Mo. See advertisement on page 41.

Economy in Milk Handling.

Economical practices may be employed in the most simple of farm occupations. The ordinary method of handling milk is wasteful in the extreme. Better plans and those which insure profits may be learned from the book published by the Sharples Separator Co., advertised on page 28 of this paper. This firm manufactures the highly perfected Sharples Tubular Cream Separator. The book mentioned and the special catalog may be secured by writing to Sharples Separator Co., Chester, Pa.

Rock Island Corn Planter.

The Rock Island corn planter is a phenomenal agricultural machine because it does automatically many things and does them so well that it has been called the corn planter that thinks. The number of grains to the hill may be instantly reg 'ated by the driver without stopping the machine or interfering with it in any manner whatever. The importance of these devices alone will be appreciated by farmers who have land that is spotted with rich and poor places, which require an adjustment of the number of grains to the hill. There are other devices equally as important, all of which goes to make it a corn planter above reproach. Full information concerning it may be obtained by writing for special circular, address Rock Island Plow Co., Rock Island, Ill.

Woodpecker Untouched by Flood.

Our readers will be pleased to learn that The Middletown Machine Company, 323 First St., Middletown, Ohio, where the electric-starting Woodpecker gasoline and kerosene engines are built, was untouched by the recent flood in that section. The factory suffered but one week's interruption through absence of workmen. Freight service is being rapidly restored over all lines, and prompt shipments are being made. If any of our readers are holding up an order for an electric-starting Woodpecker engine on account of the flood, you can send it at once and safely expect immediate delivery. See page 19 of this issue on which an advertisement for this company appears.

Appleton Quality.

Few active farmers can remember back far enough to recall a time the Appleton Mfg. Co., was not engaged in the work of making and distributing farm machinery, which led to better farming and better profits. Today the firm makes a special offer on the Appleton manure spreader, a small illustration of which appears in the advertisement on page 8. It is made with either wood or steel wheels and in all its construction it possesses a durability that makes it answer every requirement. It may cost a little more than some other spreader, but in the long run it will be found to be an economical purchase, because it wears longer and requires fewer repairs. It is made in ten styles, all fully described in their catalog, for which address Appleton Mfg. Co., 209 Fargo St., Batavia, Ill.

Inexpensive Conditioners.

Farmers who have not tried it may feel that the use of lye as a conditioner is not just in line with their ideas. If so it is because they have lacked experience. In the big advertisement on page 35 the testimonial made by Clayton Messenger is a convincing one. Mr. Messenger is a farmer who raises hogs as a business. He does it in a way which insures profits at the least possible expense, and without extravagent care. It will be noted that he makes use of Lewis Lye to good advantage, he tells how he does it and why he does it. Other farmers may learn to make the same profitable use and not only make money for themselves, but reduce the chances of loss of hogs. A great deal of important information may be learned from the book entitled "The Truth About Lye,' and without cost. Write to Pennsylvania Salt Mfg. Co., Philadelphia, Pa.

The Waukesha Guernsey Sale.

Every animal consigned to the fourth annual sale of the Waukesha County Guernsey Breeders' Association, which will be held at Waukesha, Wis., on May 22d, will be entered subject to the following conditions, which are quite unusual and which protect the buyer in, what would seem to be, every possible way: No animal will be cataloged for the sale until an entry fee of $3.00 has been paid. No animal will be accepted which is under five months of age at the time of the sale. No substitution of animals will in any case be allowed. Any animal consigned must not be sold previous to the sale. Every animal entered must be accompanied by a certificate of health, in triplicate, on or before the date of sale—one of which will be given to the buyer, one to be placed on record in the office of the secretary of the association, and the other given to the transportation company. Every animal must be guaranteed as represented and the consignor will be held responsible for such representation. In case any animal announced as bred proves not in calf, and fails to get with calf after a reasonable trial period it can be returned at the consignor's expense and another animal of equal value as near as possible must be given in exchange, and the expense of the last shipment borne by the purchaser. All animals offered for consignment will be inspected by a committee representing the association, who will have full power to accept or reject, as they think best in the interests of the association, even up to the time of sale. No person consigning animals to the sale will be allowed to bid at the sale or permit any person to bid for him.

Mammoth Jacks.

J. C. Huckstep, Eolia, Pike county, Mo., is always pleased to show the string of mammoth Missouri and Kentucky jacks he has in his barns at the farm near Eolia, Mo. Mr. Huckstep prices these jacks right and backs them with as good a guarantee as is possible to be had. Note page 45 for Mr. Huckstep's advertisement and when writing him kindly mention this paper.

Short-horn Herd Bulls.

F. H. Ehlers, Tama, Iowa, is offering for sale on another page three Scotch herd bulls. One of them is Lancester Sultan by Missie Sultan, another is a September yearling of the Lady Annie family and the other is a yearling Missie bull by Scotch Sultan, a noted prize-winning bull by the celebrated Whitehall Sultan. Mr. Ehlers will also sell some cows and heifers at reasonable prices. Write your wants mentioning The Homestead.

Farm Pump Engine.

The Fuller & Johnson Mfg. Company make an important announcement on page 19. It has to do with the Fuller & Johnson Farm Pump Engine. It is scarcely necessary to inform our readers that this engine is one which will compare with any other. The important point just now is that the manufacturers have decided to make an especially low-price offer and one which will interest every engine buyer. Full information may be learned by filling out the coupon in the advertisement and forwarding it to Fuller & Johnson Mfg. Co., 4 Ironton St., Madison, Wis.

Air-Cooled Engines.

Simplicity in any machine, whether it be devised for the use of the farmer or for the expert mechanic, is an all important feature. We are glad to call the attention of our readers to the advertisement of the Olds gasoline engine, which is made with the utmost simplicity and with an equipment for doing work not excelled by any other engine of its size. Particular interest arises from the fact that the smaller sizes of this engine are adapted especially to many of the duties of the farm that require engines of a portable character. For catalog address The Original Gas Engine Co., Dept. D., Lansing, Mich. See page 29.

How to Grow Strawberries.

Mr. J. L. Todd, Des Moines, Iowa, Route No. 3, whose advertisement appears in the Horticultural Department in this issue, is offering one of his little books on "How To Grow Strawberries" to every one of our readers who sends him $1.00 for his choice collection of 200 plants. The book tells how to prepare the ground and gives instructions on how to plant them. Mr. Todd says it is as easy to grow strawberries as any other small fruit or vegetables, and he advises us that this book is made up from his thirty-two years' experience in growing small fruits. We would suggest that our readers send him a trial order and get this little book.

Modern Binder Excellence.

One of the earlist recollections of the writer was that of driving four horses to a reaping machine, while two husky men took turns in raking off the bundles. It was a hard and tiresome job and one in which two men, a boy and four horses did no more work than now can be done by one of the late light-weight binders equipped with the original farm Cushman binder engine. The little Cushman is the latest work in the perfection of grain harvesting devices. It weighs only 167 pounds. It may be attached to any binder and its object is to operate the cutting and bindery devices thus leaving the hauling of the machine as the only work of the two horses. By its use grain cutting may be done very easily, even at a time when it would be impossible for four horses to drag a binder through the field. The importance of the advantages of the Cushman engine are so great that we must refer them to the catalog of the manufacturers for full illustrations. See advertisement on page 15 and write to Cushman Motor Works, 2029 N St., Lincoln, Neb.

Harold H. Bellows.

Breeders and admirers of Short-horn cattle who have for years realized and appreciated the valuable work carried on by the late George P. Bellows, will be pleased to know that the business is to be carried on by Harold H. Bellows the only son, who has always enjoyed the comradeship, the advice and instruction, such as can only be given by father to son in a business both enjoy and excel in. Colonel Bellows' fondest hopes were realized some few years ago when Harold showed by his work and actions that he aspired to follow in the footsteps of his father, by breeding superior Short-horn cattle. After two years at Northwestern University, Chicago, Harold Bellows entered the Iowa Agricultural College and it was planned that during the coming summer he would enter into partnership with his father, but the sad accident changed all. Harold Bellows now takes charge of the farm and the herd; the father's wishes will be carried out by a son who will do all in his power to cause the name of Bellows to continue in connection with better Short-horns as his father had hoped and planned. He has the qualifications gained through inheritance and by the instructions and advice of a master builder, he has the spirit found in winners. He is clean cut and square and the good name earned by father, uncles and grandfather will be upheld. That Harold Bellows will have the best wishes of every lover of good cattle is assured. The annual sales held under the name of Bellows Bros. will be continued, and Harold Bellows takes up the work where the untimely

accident ended the grand work of one who had bulided so well that his name and reputation will live on. We welcome Harold Bellows as a breeder. He is a gentleman whom our readers will be pleased to meet and know.

Moline Plow Company's Goods.

In an announcement on page 10 the Moline Plow Company state that the famous old and time-tried Adriance binder is now being put out by the Moline factory. The Adriance has been in the market for nearly sixty years. It has been given tests of the most severe character and it does not fail to do all work required of it. A booklet which gives complete details together with prices and other information may be obtained by writing to Moline Plow Co., Dept 11, Moline, Ill.

Phillips' Poland China Boars.

C. W. Phillips, New Sharon, Iowa, one of Iowa's good breeders of big-type Poland Chinas, is making very attractive prices on August and September boars sired by Big Bone 3d, a grandson of the noted Big Bone and a number by Long King Superior, one of the good sons of old Long King. Mr. Phillips makes a very fair proposition to our readers. If you need a boar send him a check for $25 and he will send you a boar that will please you. If when the boar arrives you are not satisfied, send him back and your money will be refunded. These pigs are in good, thirty condition and will develop into large boars. See the advertisement elsewhere and mention this paper when writing.

Matern Offers Percheron Bargains.

L. A. Matern, Wesley, Iowa, is offering on page 46 of this issue of The Homestead some good Percheron stallions, ranging in age from yearlings to five year olds. These are especially good bargains for the late buyer of stallions, and will be found to be just what Mr. Matern guarantees them to be. They are from the best of sires and are good in size, having the general type of the drafter that is making this section one of the best in the country in the growing of big, heavy and active draft stock. People who may write to Mr. Matern will find that it will result in placing before them some good deals on stallions of this breed. We ought to say in passing that Lou Matern is one of the livest of the young live stock auctioneers that it has been our privilege to see working in the ring at some of the Duroc Jersey sales in the northern part of the state. Those who may be contemplating holding a sale of breeding stock at any time will do well to write him for his terms. Address L. A. Matern, Wesley, Iowa. His advertisement of the Percheron horses appears on page 46 of this paper.

Faulkner's Spotted Polands.

Homer L. Faulkner, Jamesport, Mo., the man who has made the big spotted Poland China popular wherever hogs are raised has this year a great lot of spring pigs sired by his most noted breeding boars and from the sows that produced the hogs that sold in Mr. Faulkner's February sale at an average of over $90. Brandywine, Lucky Judge, Good Enough and Billy Sunday are the pricipal sires used and to these boars and the daughters of old Budweiser Mr. Faulkner owes much of his

success. Brandywine now past six years of age is Mr. Faulkner's leading herd boar and as a breeding boar he out ranks old Budweiser so that he is a worthy successor to the hog that made Faulkner's spotted hogs famous. The younger boars are proving excellent sires of big litters of spotted pigs and they are worthy assistants. Mr. Faulkner has made a specialty of herd headers and foundation stock for breeders and he is this year as usual prepared to furnish pairs or trios not related. He has never used any but spotted sires and dams and the result is his hogs are so bred that they throw spotted pigs at all times. Mr. Faulkner furthermore has never had a siege of cholera on Highview Farm. He uses the immunizing serum when cholera is near and always keeps his pens and the farm clean, so that his hogs have strong healthy constitutions. Last year Mr. Faulkner sold over 400 head, he is well stocked this year and as he has not changed herd boars he knows how the young things will develop so that it is possible for him to fill your order with pigs at weaning time, with every assurance that the pig will mature satisfactorily. By buying early express charges are light and you get the advantage of the early assortment of early farrowed pigs. Note page 43 for Mr. Faulkner's advertisement and when writing him kindly mention this paper.

Maasdam & Wheeler's Percheron Stallions.

Maasdam & Wheeler, Fairfield, Iowa, have some excellent imported two-year-old Percheron stallions that they are now pricing worth the money. All of these horses were personally selected in France by E. G. Wheeler, the junior member of the firm, a man who has the reputation of buying only the very best obtainable. Among these horses are a number that would do to head a band of pure-bred mares. They also have a few American-bred stallions and mares and fillies of different ages that they would price very reasonable. In their barns you will find the kind good enough to win at the best horse shows in the country and at the same time the prices asked for these horses are reasonable considering their quality. Write them your wants mentioning The Homestead.

Duroc Jersey Fall Boars.

Breeders of Duroc Jersey hogs will be interested in the statement made in the advertisement of Wm. Reed, which will be found on page 43. Mr. Reed is now offering some 200-pound fall boars, of the large, growthy, smooth and heavy-boned kind. He informs us that they are the best lot he has ever owned at one time. They are sired by Chief Select and Reed's Top Col. Their dams are daughters of Model Chief, Advancer, Chief Select and John's Ohio Chief. Students of Duroc Jersey pedigrees and those who are acquainted with Duroc Jersey history will at once recognize that the blood lines involved in Mr. Reed's herd are those which have produced the most famous animals of the breed. It is a generally accepted fact that Mr. Reed stands without a peer in his knowledge of pedigree and proper crosses. He will make specially attractive prices on any of these boars and is prepared to ship at any time. Those who care to make personal selections can do so without loss of time, as Mr. Reed's herd is now located adjoining the city limits. Address inquiries to Wm. Reed, Rose Hill, Iowa.

Geo. Allen & Sons' Short-horn Sale. Last Call.

In previous issues of The Homestead we have mentioned in some detail the offering of Short-horn cattle that will be sold by Geo. Allen & Sons, South Omaha, on April 22d. The writer feels that the Short-horn cattlem of the country owe it to themselves to attend this sale, for their unusual excellence is such as to appeal to those in search of Short-horns and we recommend them to Homestead readers. Arrange to attend. It is absolutely a business move to do so.

Imperial Automobiles.

The attractive and interesting advertisement of the Imperial Automobile Company will be found on page 11. This announcement gives prominence to the facts that quality always wins out, that economy in cost is important, that the Imperial has high merit for country service, that it has many advantages and that it is sold at a reasonable price. There are five types of the Imperial, each of which fills a special place in the demands of automobile owners. You may learn all about them in the Imperial catalog, for which address Imperial Automobile Co., Jackson, Mich.

Taylor & Welty's Hereford Dispersion Sale.

The well-known Hereford herd of Taylor & Welty will be dispersed at public sale at the farm near Wanatah, Ind., Tuesday, April 29th. A change in farming operations makes this sale necessary, otherwise the cattle would not be priced at all. This herd was established with the best of foundation stock, the herds of Hutcheon, Bryant and Van Natta being heavily drawn upon, and judicious additions have been made to it each year. Mr. Taylor has given the herd his personal attention. He is an excellent cattleman and the best of caretakers, and the results of his efforts will be seen sale day in a lot of attractive producing cattle. It is essentially a producing herd in the fullest sense of the term. There will be about eighty head, big and little in the sale, and the public will not be disappointed in the condition of the cattle. Over twenty of the cows will sell with calves at foot, sired by the stock bulls, Champion and Prince Donald, and everything of breeding age, and that means every female in the catalog, with the exception of a few yearling heifers, will be safe in calf. The cows in this herd are all the big breedy kind that make such good mothers, are as a rule all good milkers, easy feeshers and are bred along popular lines. There are very few sales in a year's time where one will find a lot of breeding cows and heifers that in real value approach those that will be submitted for public appraisal at Wanatah, Ind., April 29th. The three herd bulls included in this offering are: Champion, a grandson of Beau Brummel; Prince Donald, a son of the noted Prime Lad 9th, and Beau Alto, a grandson of Masquerader. Four other strong bulls are listed, as well as four choice bull calves. There is much about this lot of cattle to commend them to the public, and we bespeak for them the consideration on sale day that their merits warrant. The cattle are all good, young ages, all workers, in good shape and offered by a firm that is reliable in every way. The advertisement appears on page 40. Look it up and send for a copy of the catalog to Taylor & Welty, Wanatah, Ind., mentioning The Homestead when you write.

American Goods For Sale.

Some breeder who is wanting to buy a good Short-horn bull to head his herd will be interested in that splendid son of Imp. Choice Goods that W. H. McLaughlin, Shelby, Iowa, is offering for sale. This is American Goods, a bull that was bought from the Bellows Bros. at a long price. Mr. McLaughlin has used him for a number of years and desiring to hold his heifers he is therefore offering him for sale. His dam is Princess Violet by Alice's Prince and he belongs to that celebrated Marsh Violet tribe. Mr. McLaughlin also offers ten nice young bulls for sale. Write him at once or go and see these bulls. Kindly mention The Homestead when corresponding with him.

Art and Advertising.

Our readers have all undoubtedly noticed the series of large advertisements Montgomery Ward & Company have been running in our columns for some months past. This advertising is largely pictorial and it will probably not surprise our readers to be told that some of the best artists in the United States contributed to the work and the series has therefore cost the great mail order house many thousand dollars for art work alone. This large expenditure is a direct compliment to the American farmer and indicates his appreciation of the artistic and beautiful. Many of our readers keep copies of The Homestead for some time and we can assure them it will be a refreshing hour of study to turn back through issues of The Homestead for the last six months and study these advertisements, both for the pleasure and profit to be derived. We have especially impressed with the advertisement appearing on page 31 of this week's issue of The Homestead although many other previous advertisements have been fully as good. We are glad to say that this series will continue for some months.

Theo. Foss' Durocs.

One of the most enterprising breeders of Duroc Jerseys of Nebraska is Theo. Foss, of Sterling. Mr. Foss has been in the business only a few years but in that time he has assembled a nice line of stock. His herd was materially strengthened by the addition of a few choice sows the past winter. They were purchased from good herds and mated with good boars. Mr. Foss reports the spring crop coming in nice shape and that he has a good number. A majority of the spring pigs are by Prince of Col. 2d by old Prince of Col. He is really one of the real good Prince of Col. boars of the country. He is breeding well. Mr. Foss has a very few fall boars for sale, and they too are of good breeding. Kindly write about them at once, they are priced low, and when doing so, kindly mention The Homestead.

Bryson's Short-horn Sale.

Sixty head of producing Short-horns will be offered at public sale at Lake Fork, Ill., Tuesday, April 29th, by W. H. Bryson, and the public will find the cattle a most satisfactory lot of breeding animals in good condition. Mr. Bryson has been breeding cattle for a good many years. A practical cattleman, he knows the requisites of a satisfactory beef animal, and has been producing that kind on the broad acres of his farm at Lake Fork. His cattle have always been handled in a manner conducive to future usefulness, and as a consequence the buyer will have submitted to them a lot of big, rugged, breeding matrons, with scale and constitution, regular producers, heavy milkers, the kind that will prove profitable to anybody. There are forty-five females cataloged for this sale, and fifteen bulls. Included in the bull offering is Bryson's herd bull Golden Edgewood, sired by Golden Prince and out of a dam by Ceremonious Archer. He is coming four years old, and is only offered owing to the fact that Mr. Bryson has so many of his daughters in the herd. He is well enough bred to go into any herd and his condition is good enough to please the critical buyer. There are fourteen young bulls listed, all sired by Golden Edgewood, and a soggy, short-legged, thick, meaty bunch of youngsters they are. They have never had any special fitting, having run outdoors practically all winter, but they are made right and the manner in which they have been handled assures buyers that they will give a satisfactory account of themselves. The production of good cattle rather than a desire to follow certain blood lines in breeding has been Mr. Bryson's policy, and the excellence of his work will be seen sale day. This is a lot of cattle that should appeal to every farmer in the corn belt, as they are the sort that will add value to every farm. They are a beef proposition of the best kind and worthy of strong appreciation on sale day. The sale will take place at the farm which adjoins Lake Fork, a town on the Chicago and St. Louis branch of the Illinois Central railroad, twenty miles east of Springfield and fifty-six miles south of Peoria. Write today for a catalog to W. H. Bryson, Lake Fork, Ill., mention The Homestead, as per the advertisement on page 41.

Angus Bulls.

John Lakings, Hurley, S. D., can describe to prospective buyers five of the choicest sort of young Angus bulls. They are of herd-heading qualities and deserve attention from men who want the best. The old sire now on the farm there, is a type all will admire and his calves that are in this bunch are indeed excellent ones. With the demand for good cattle increasing at its present rate, and the scarcity of good bulls at this time these young males are the sort that will help anyone to produce a profitable type of cattle. Write now to Mr. Lakings, mention this paper. Address John Lakings, Hurley, S. D.

Porter's Duroc Jerseys.

J. C. Porter in an advertisement on page 43 announces that he has now for sale a few extra good Duroc Jersey boars of October farrow. These he says have lots of size and quality, plenty of length, good bone, strongly arched backs, short, broad heads, nicely tipped ears and an excellent finish. They are sired by R. J.'s Chief, he a grandson of Ohio Chief. Their dams are of Crimson Wonder and High Col. breeding. These pigs will weigh around 150 pounds. Among them are some extra good ones. Reasonable prices will be quoted. Mr. Porter guarantees satisfaction to his patrons. Address inquiries to J. C. Porter, Ogden, Iowa.

Drybread's Bull Consignment.

Samuel Drybread, Elk City, Kansas, consigns twelve choice Hereford bulls to the combination sale to be held at Kansas City, May 6th. These are a choice lot which range in age from twelve to twenty-six months. They have been selected from a lot of 150 head. They carry strong infusions of Anxiety blood. They are close descendants of such sires as Beau Brummel, Imported Britisher and other sires of high merit. Mr. Drybread insists that this is the best lot of bulls he has ever sent out from his herd. They have been reserved for this sale, although tempting offers have been made for them at private sale. The sale will take place at the stock pavilion at Kansas City. For catalogs address R. T. Thornton, Manager, 1313 E. 15th St., Kansas City, Mo.

Closing Out Clydesdales.

If there is any of our readers who wants to buy a good Clydesdale stallion they should lose no time in seeing R. O. Miller, Lucas, Iowa. He desires to close out all of his Clydesdale stallions and is making special prices for the next thirty days. He offers to sell his great young stallion Right Choice, a first-prize winner at Toronto and Ottawa, two of the strongest shows on this side of the water. This is a stallion that is good enough to go anywhere. Another great colt is Lord McQueen, a son of that sensational show and breeding horse, McQueen, Baron Erskine, a son of the great Two and Two and Lord Corndale, a grandson of that noted horse, Baron Pride. We know of no place where such Clydesdales can be had for such money as Mr. Miller is offering. We therefore say to you to go and see Mr. Miller and these horses without delay.

Russell's Pontiac Hengerveld Parthenea.

The value of a herd sire is determined by his individuality, breeding and ability to transmit to his progeny the great qualities of his ancestors. Taking the three features as a whole, where can there be found today the equal of Pontiac Hengerveld Parthenea? First of all, individually he is all that is to be desired, typical in dairy form, large, possesses great depth of body showing marvelous capacity and constitution, is an extra good handler and a remarkably nice bull in every way. The dam is a good record cow with an excellent list of daughters. She is a daughter of Sir Inka Artis Mechthilde and Netherland Triumph 3d. While Netherland Triumph 3d never was afforded the opportunity of an official test, she was a cow of great transmitting ability and she comes from a line of ancestry that has produced many large record animals. Sir Inka Artis Mechthilde has proven a sire of more than ordinary merit and he is strongly bred in the lines that were best known in the earlier history of the breed in this country. The sire, Hengerveld De Kol, is one of the two only sires having in excess of four thirty-pound daughters and he is far in the lead as a sire of twenty-pound cows. His dam is a daughter of the former world's champion, Netherland Hengerveld and Milla's Pietertje Netherland, one of the greatest sires of his time and to whom traces a large percentage of the breeds largest record cows. The sire of Hengerveld De Kol is De Kol 2d's Butter Boy, one of the best sons of De Kol 2d, and a bull unsurpassed as a sire of renowned sons. These excellent blood lines coupled with his own superior individuality have made possible his long list of great record daughters which is headed by the world's champion senior four year old. Agatha Pontiac (36.9 pounds). Another of his daughters has just completed a record over thirty-one pounds and several others have every appearance of being fully capable of like production. Potiac Hengerveld Parthenea has many daughters not yet in milk and in the very near future his list should be largely increased in number and it is safe to say his list of daughters will average higher also. There is no better dairy sire in service today. Twenty-five of his daughters

NEXT WEEK'S SALE PROGRAM

Tuesday April 22 — Short-horns, George Allen & Sons, South Omaha, Neb.

Wednesday April 23 — Short-horns, Firme & Stone, Hastings, Neb.

DISPERSION SALE OF TAYLOR & WELTY, HEREFORDS, WANATAH, INDIANA, TUESDAY, APRIL 29TH

55 Head. 11 Bulls, 20 Cows With Calves at Foot

We have decided to disperse our herd owing to a change in our farming operations. The foundation stock for this herd was selected with sound judgment from several of the best herds in the country, and no expense was spared to get the best possible stock. There will be nearly eighty head, big and little. The bull offering includes our three herd bulls. Champion 166175, a grandson of Beau Brummel; Prince Donald 370541, a son of Prime Lad 9th, and Beau Alto 25th, a grandson of Masquerader. In addition there are three two-year-old bulls, one yearling and four bull calves, all good ones. The females are a grand lot of big, healthy, producing cows, over twenty of them with calves at foot, and all of breeding age safe in calf to one of our herd bulls. The cows are the get of Donald Rex, Prime Lad, Parsifal, Beaumont, and other noted sires, and are as good a lot of cows, numbers, breeding and individuality considered, as have been presented anywhere at public sale. Come and own some of the grand big cows in this offering, all producers, and from the most popular strains of blood. Everything will be sold. No reserve. Come and spend a day with us. It will do you good, whether you buy or not. Cols. Reppert, Huxley and Hepp, auctioneers. Write today for catalog, mentioning The Homestead, to

TAYLOR & WELTY - - - - WANATAH, INDIANA

Wanatah is on the main line of the Pennsylvania railroad, fifty-two miles east of Chicago. Farm joins city limits. Sale under cover.

are included in the great Holstein sale of T. H. Russell, Geneva, Ohio, May 1st and 2d. A picture of this remarkable sire will be found elsewhere in this paper.

Saunders' Short-horn Bulls.

Those of our readers who are wanting good, young Short-horn bulls should go and see C. A. Saunders, Manilla, Iowa. He has a number of good young Scotch bulls that are herd headers and he is pricing these where they will sell. If you are on the market for a bull make it a point to see Mr. Saunders at once.

Overland Excellence.

On the last page of this paper appears a most effective announcement of Overland cars. It is certainly a strong argument in favor of the Overland, that the increased sales in something like a dozen states have been so notable as shown by the figures in the advertisement. These figures are absolute proof of the high quality of the Overland cars. The Overland is a time-tried car and one which has been constructed with particular aim to fill the demands of critical buyers, men who understand car quality and were willing to pay the price when they found it. It is worth while to look at the Overland before buying. It is worth while to note the remarkably low price at which it is sold. Other information may be obtained by writing to The Willys-Overland Co., Dept. 80, Toledo, Ohio.

Extraordinary Aberdeen Angus Spring Bull Sales.

Every breeder, farmer and rangeman in need of a bull or bulls should be interested in the Aberdeen Angus spring bull sales which are to be held at Omaha, Neb., April 29th and May 1st at Chicago. These sales are held under the auspices of the American Aberdeen Angus Breeders' Association. Every bull that will be offered will be guaranteed by the association through its members. Seventy-five bulls will be offered at Omaha and ninety-five at Chicago. The association is not holding these sales for pecuniary profit, but instead is holding them for the purpose of assembling a large number of bulls at Omaha and Chicago so that breeders and farmers in need of bulls can attend the sales and have a large number of choice bulls to make their selections from. The association has made a liberal appropriatio to partially defray the expense of the sale. The bulls are from the leading herds of the country. They have been specially developed for the spring bull sales.

There are twenty-five Blackbirds, twenty Ericas, twenty Prides, fifteen Queen Mothers and represen atives of all the other leading families. There will be bulls of all ages and they will sell at different prices to suit the farmer and rangeman as well as the veteran breeder. Every bull listed will be sold even if they only bring a beef price. There will undoubtedly be many bargains. There is a great scarcity of breeding bulls in the country of all breeds. It is to every farmer's intertest to buy an Aberdeen Angus bull because they represent the best beef breed of cattle in the world and they are still selling at very low prices. The association has made a systematic inventory of all bulls fit for service and has cataloged practically every bull that measured up to the required standard of individuality. The breeders who have consigned the bulls are prepared to take farmers' prices for their bulls thus it is to be hoped every cattleman in need of a bull will avail himself of this opportunity to secure his needs. There will not be another opportunity this season to secure bulls of any breed or the Aberdeen Angus because the Aberdeen Angus bull sales will practically clean up all the bulls old enough for service. Now is the opportune time to get into the breeding of beef cattle. Before this time next year bulls will be selling at much higher prices and every cow fit to breed will have doubled in value. Farmers all over the country are realizing it will pay to breed beef cattle and the demand for bulls the past few months has been greater than has been in evidence for many years. It is to be hoped every breeder, farmer and rangeman will avail himself of this last and only opportunity of the season to secure his needs and his own price. Catalogs are now ready for distribution. Anyone interested in these sales should send to Chas. Gray, secretary and sales manager for a catalog at once and examine the list of names of consignors and the pedigrees of the animals listed. Arrange to attend these sales. They will be the greatest events that have taken place in Aberdeen Angus circles for many years. The bulls will be shown and prizes awarded in the mornings and sales will be held in the afternoons. Anyone unable to attend the sales should arrange with his commission firm to secure his needs. Bids sent to Col. Silas Igo or to Chas. Gray, secretary, will receive careful and personal attention.

Hess & Son's Short-horns and Polands.

One of the oldest and best known herds of Poland Chinas and Short-horns in Nebraska is owned by H. H. Hess & Son, Surprise. Everything at their farm has wintered in splendid condition, and the prospects for an extra choice lot of Poland Chinas this fall is most encouraging. About 100 fine early pigs are on the farm, principally the get of Pleasant Lawn Special 2d, a grandson of Blue Valley Quality. They are out of sows by Big Major, a son of the 1,05-pound Long Chief, Jumbo Quality, Wade's Jumbo, Searchlight, Price's Wonder and Hess' Jumbo. This is all the very best of big type stuff and the former reputation of this herd will be more than maintained by this offering. Bull trade has been extra good with this firm, and nothin a year old has been on the farm for some time. The great breeding bull, Good Knight, is in service in this herd, and the writer is of the opinion that he is one of the best half dozen bulls within the state. An extra choice young bull by this sire and out of the good young cow, Dew Drop, a full sister to the great show and breeding bull Diamond, formerly owned and used by Hess & Son. Dew Drop is by Golden Victor and traces to Imp. Fair Queen by Gladstone. This bull is a herd header of the right sort. Another very choice prospect is a full brother to a bull these gentlemen sold to Wm. Gleed, Chambers, Neb. Mr. Gleed had searched a long time for a choice bull and was pleased with this selection. He is also by Good Knight and out of Butterfly Lady by Godwin, tracing to Imp. Butterfly 43d by Royal Duke of Gloster. There are still a few others that will develop into splendid bulls, but the ones just mentioned are the sort that are extremely hard to find. Readers of The Homestead in search of something of this sort will do well to address H. H. Hess & Son, Surprise, Neb., for full particulars. Also keep the Poland China herd in mind, for much desirable stock will be for sale within the season.

Firme & Stone's Short-horn Sale. Last Call.

On April 23d will occur the sale of Short-horn cattle that will be made by R. C. Firme, Hastings, Neb., and A. A. Stone, Hansen, Neb., the sale to be held in the sale pavilion in Hastings, Neb. This sale is the day immediately following the sale of Short-horns that will be made by George Allen & Sons, South Omaha, and as the train service is exceptionally good, the writer would urge Homestead readers to take advantage of the opportunity here presented to attend these two great sales with so little expense. These are good cattle in the Firme & Stone sale and there will be both bulls and cows that will meet with the approval of those that are seeking choice beef-producing cattle. These herds are well-established herds, and herds that have employed a number of valuable sires. The writer especially urges that those of our readers that can, to avail themselves of this chance to make selections from those good herds. Hotel accommodations are first class in Hastings, and the train service to all points is all that could be wished. It will be a bit late for the catalog, but prompt work will get it to you in time for the sale. Mention The Homestead if you should write.

Some Extra Choice Durocs.

With this issue of The Homestead, J. C. Theobold, Ohiowa, Neb., starts an advertisement in which he offers a few fall Duroc Jersey boars, also a few fall gilts and the junior yearling boar, Crimson Chief. The writer saw this stock a few weeks ago and we wish to say that we do not hesitate to recommend this line of stuff to anyone needing some good ones. There is not a better bred lot of stuff in Nebraska and as individuals they must please those that are really familiar with the good kind. One extra choice fall boar is by Valley Chief Co., by Col. Chief and out of a daughter of C. W. Again. Another choice fall boar is out of the noted sow Ohio Belle by Ohio Chief and still another is a fall brother to the junior yearling boar, Crimson Chief. Crimson Chief will make an extra good junior yearling show, and he can be bought below what such a boar should really sell for. The fall boars are really good show material and extra high-class herd-header prospects. The gilts are fully as good. This stock is the sort the writer wishes to recommend to all that wisn to buy, for we know that if the buyer will do his part by these hogs in the way of decent care that they will positively make good. Mr. Theobold is naming prices on this stuff that is below what such hogs can usually be bought for and we would urge our readers to make application for whatever of these hogs they wish at once. Mention The Homestead when you write.

Start to raise that mortgage now
Start with the Russell type of cow.
She's the cow that coins the dollar
Buy her kind and you'll never holler.

Russell's Great Holstein Sale.

May 1st and 2d T. H. Russell will sell 200 head of Holstein cows and heifers at Idle Hour Place Stock Farm, Geneva, Ohio. The fact that 200 head are to be sold makes it an event of more than ordinary importance, but when you add to that the fact that the animals are of the strongest lines of breeding and that every one is guaranteed to be without a blemish, it is at once apparent that this is a sale that should attract the attention and patronage of every person in this country who is interested in Holstein cattle. Daughters of some of the greatest sires known to the breed are listed in abundance, and they come from high-producing dams, while there are plenty of high-powered record animals cataloged that will add strength to any herd. Recently Mr. Russell purchased the great sire Pontiac Hengerveld Parthenea at a very long price, and twenty-five daughters of this great bull are listed. He is the sire of the champion four-year-old cow, and has numerous daughters in the thirty-pound list, and today his get are probably as much if not more sought after than those of any other Holstein bull. There will also be fifty-five daughters of Count Cornucopia Korndyke, a bull of very superior merit both as regards individual worth and breeding. He is a son of Pontiac Korndyke and the $8,000 cow Pontiac Rag Apple, making him strong in the blood of Hengerveld De Kol and Pontiac Korndyke, two of the greatest sires known to the breed. When one considers that fifty-five daughters of this great sire and twenty-five daughters of Pontiac Hengerveld Parthenea are included in the sale list it is easy to see the importance of this event. Mr. Russell had originally intended to make two different sales this year, but finally decided that it was the best for the buyers that they should be given an opportunity to make prices upon 200 at one time and decided to make the sale a two-day event. At no other breeding establishment will buyers find such an opportunity. Mr. Russell guarantees there will not be an undesirable animal in the list, and his guarantee is good in every way. Mr. Russell has made a success of life, both as a big business man and as a progressive farmer and breeder. He is a man of big ideas and consequently does things on a big scale. He has proven to his satisfaction that the Holstein breed is the dairy breed that will produce the most satisfactory returns, consequently he is giving to that breed his heartiest support, and knows that he is producing the sort that will not fail to make good. Opportunities such as this are not presented to the buying public very often and when they are should be appreciated and taken advantage of. The daughters of the greatest sires known to the breed, and cows and heifers bred to these sires form a proportion so attractive and unusual, especially when one considers that there are 200 of this class of Holstein females to be offered at Geneva, May 1st and 2d, that it would seem no further announcement would be necessary to attract the buyers from every section. The catalog

Chicago Farms' Wonderful Dairy Records.

R. B. Young, Buffalo Center, has been making some milk records with his Holsteins at his Chicago Stock Farms, which ought to be brought to the attention of every breeder of cattle in the corn belt. There has been an impression that the biggest records in milk and butter production have been made in the dairy regions east of the corn belt, but there are not many breeding establishments that can equal the record Mr. Young has made and can show the production by as many cows as near the leaders of each class as his herd can now. The following is a list of some of the cows and their milk and butter records for a year:

CHICAGO STOCK FARM'S YEAR RECORDS, 1912.

	pounds of milk	pounds of butter fat
5 year old and over.		
Pauline Queen Johanna	25,660.1	819.72
Spotted Lizzie 3d	24,347.9	807.897
Pauline Paul Beerepoot	22,989.1	777.25
Skylark Mercedes De Kol Johanna	20,642.0	717.96
Lady Hengerveld De Kol Rue	20,642.0	683.20
Miss Netherland Artis Parthe	17,629.7	679.10
De Kol Myrtie Zozo	16,604.7	593.65
Cusha-Netherland Twisk	17,780.7	576.636
Average		706.926
Senior 4 year olds.		
Aaggie Johanna Rue	20,243.4	724.10
Chloe Mechthilde 2d Panth	18,926.9	666.63
Oakhurst Duchess Clothlide	15,765.6	512.00
Average		634.24
Senior 3 year olds.		
Boyden Lady	16,038.1	555.03
Buffalo Mildred	14,341.6	465.48
Average		510.25
Junior 3 year olds.		
Buffalo Syklark Victoria	13,778.7	524.41
Junior 2 year olds.		
Buffalo Duchess Skylark	18,966.5	574.88

It follows that bulls and heifers from a herd like this are the best purchases one can make, for they are the most profitable and we have never seen a herd that showed such thrift and size in good dairy animals as in the herd on Mr. Young's farm. His advertisement on page 28 will tell what he has for sale. Address Chicago Stock Farms, R. B. Young, Buffalo Center, Iowa.

tells the story and should have wide distribution. It can be secured if you mention this paper and address T. H. Russell, Geneva, Ohio, as per the advertisement on page 42.

Held Bros. Offer Short-horn Bull.

Held Bros, Hinton, Iowa, offer just now a well-bred roan Short-horn bull fifteen months old to breeders looking for a service sire of good character. The equipment in breeding stock that this farm has in the past season has produced some extra choice stock and this bull, one of a pair that were offered for sale a short time ago, is the good sort that have made this farm so favorably know .. The Held Bros. also offer a large stylish imported German Coach stallion and another home-bred one showing much qaulity of the same breed. Their advertisement appears on page 43. Address Held Bros., Box 7, Hinton, Iowa.

Metz & Sons' Big Stallion Sale.

S. Metz & Sons, Homewood, Ill., are making some very attractive prices on their Percheron stallions and mares in order to clear their stables before the close of the season. Every spring Metz & Sons make a vigorous campaign for buyers and make such attractive prices and terms that their program has attracted wide attention and prospective buyers have come to realize that it is a good plan to wait for this sale. This spring they are better equipped than ever to care for the wants of their patrons, and are offering a very attractive lot of Percherons and Shires, both imported and home bred, good, young ages and in excellent condition, that they are certainly pricing worth the money. They can also supply you with a span of mares of the right sort. Look up their advertisement and write them your wants, mentioning this paper.

Herd-Heading Poland China Boars.

F. R. Barrett, Cadams, Neb., is offering Homestead readers just now an exceptional opportunity to get some choice Poland China boars at very reasonable prices. These boars are from one of the oldest established herds in Nebraska and are of the real herd-heading sort. They are sired by Jumbo Jim a son of Wade's Jumbo by the 1,000-pound Jumbo that stood at the head of the Wintermute herd for some time. Some boars are also by Blue Valley Wonder by Blue Valley Quality, this being the line of breeding that has made the Thos. F. Walker herd famous over a continent. The writer recommends these boars to those of our readers that really wish something choice, for they are certainly of that class. Do not hesitate to write about these boars, or to order, for they are priced much below what they are really worth as breeding propositions. Full description and prices will be sent by return mail. With the great scarcity of meat-producing animals that is now fully apparent, those of our readers that are in such position that they may, should certainly breed a number of sows for fall litters, and the boars mentioned above are the right sort to buy. Mention The Homestead when you write.

Gudgell & Simpson Cattle in Kansas City Sale, May 6th.

The Gudgell & Simpson consignment to the sale at Kansas City, May 6th, consists of fifteen heifers, two years old past and all bred. They are all of their own breeding and, of course, strong in Anxiety 4th blood. They have the well-recognized Anxiety 4th type and characteristics, good heads, strong bone, thick flesh naturally, deep bodied and blocky. All of them will make big fine cows. Those heifers are sired by Beau Picture, Beau Dandy, Domino, Beau President and Bright Donald. Six of the number are sired by Beau Picture, a son of Beau President, out of a Perfection cow, that is producing some of our best calves today. Those who have attended our sales of the past two years have remarked the excellent backs and loins of the Beau Picture heifers together with splendid quality and thickness of flesh. Four have Beau Dandy as their sire and reveal the scale and easy feeding qualities that Beau Dandy transmits to his offspring. Of all the Beau Brummel bulls we have ever used Beau Dandy most resembles his famous sire. Three are by Domino, a bull that is fast making a great record for himself as a producer of uniformly good things. His heifers are a type that are easily recognized and of the right sort. Although not an old bull, already some of the best herds in the country have sons of Domino at their heads, that are making good. Competent judges have said that Domino has the ideal Hereford head. His heifers in this sale demonstrate the fact that he reproduces this important feature in his calves. One heifer, Correline 16th, is sired by Bright Donald, second prize aged bull at the St. Louis World's Fair and out of a good Beau President cow. Flossie 8th is by Beau President himself and of the well-known type turned out by this great bull. The dam of Flossie 8th is Flossie 3d, a Banner Bearer cow of great scale, thick fleshed and blocky. Marietta 37th by Beau Dandy is one of the plums of the offering, thick fleshed, of good scale and blocky build. Governess 6th, by Beau Picture has that thickness of loin and flesh on the back that mark the correct type of the best beef-producing blood. Bright Duchness 63d by Domino is a typical daughter of her sire, with beautiful head and feminine character, built close to the ground and smooth as an egg. These heifers are all safe in calf to our regular herd bulls. Some of them will drop calves within thirty days from the sale day. They have not been injured by high feeding, but have had plenty of good feed and spent their entire lives out of doors so that there is every reason to believe they will go on, do well and prove regular producers for the purchaser. With grass right at hand this is the most favorable time to get some of these good heifers. They will soon have calves at foot to pay the bill at small expense for production. This is the kind of heifers that will look good in any breeder's herd and the very best of foundation stock for the beginner. The cattle will be held on our farm near Independence, Mo., up to a few days before the sale. We will be pleased to show them to interested parties before the sale. Further information will be furnished on request. Catalogs sent on application to us or R. T. Thornton, 1309 E. 15th St., Kansas City, Mo.

HEREFORD SALE

60 BULLS
40 COWS
AND HEIFERS

Breeders' Combination Sale, Kansas City, Mo., May 6th

FOREST HOME
SHORT-HORN SALE

LAKE FORK, LOGAN CO., ILL., TUESDAY, APRIL 29, 1913

60 HEAD. 15 Bulls, 45 Cows and Heifers. 60

THE cattle to be offered in this sale are a practical, thrifty lot, nearly all produced on Forest Home Farm, raised under conditions that tend toward future usefulness, and will give a good account of themselves.

15 Bulls Are Listed, including the herd bull Golden Edgewood, by Golden Prince, out of a dam by Ceremonious Archer. The balance of the bulls are yearlings, all by Golden Edgewood, and a lot of low-down thick, soggy youngsters, old enough for service.

45 Cows and Heifers Will Be Sold, all of breeding age either with calves at foot or bred. The cows in this herd are all producers, the big, roomy kind that make the thrifty matrons, raised under outdoor conditions, with a view to health and productiveness.

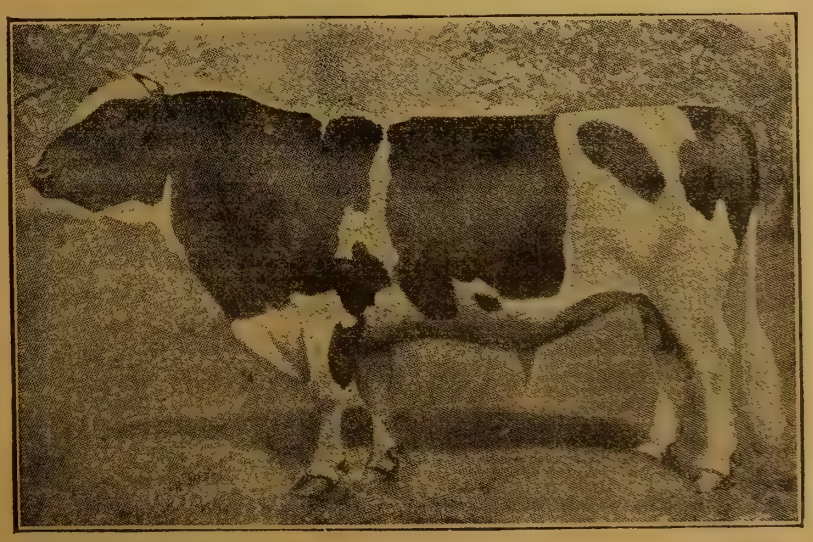
This is no speculative lot of cattle, but the natural increase from a herd that numbers 200 head, and we submit them to the public confident they will please all who are looking for good values and who put individual merit before anything else. Write today for the catalog, mentioning The Homestead.

W. H. BRYSON, LAKE FORK, ILLINOIS

Cols. Carey M. Jones and B. H. Keck, Auctioneers. Lake Fork is on the Chicago and St. Louis branch of the Illinois Central railroad, twenty miles east of Springfield, four miles west of Mt. Pulaski and fifty-six miles south of Peoria.

Frank Iams Reports on his Offering.

Frank Iams, St. Paul, Neb., in calling attention to his thirty-six imported Percheron and Belgian stallions and mares, says: Mr. Stallion Buyer:—"Get busy"—visit "Iams' Horse Emporium"—today, he has "reduced prices"—from $100 to $500 each on "business" and "show stallions." To "close out" all his "stallions and mares." They will "positively" be sold at "some price"—"Ikey" "come on along" and get a "big slice" of "Iams' melon" at "knock-out prices" for "top notchers"—you will positively buy of Iams—if you visit him and want big—drafty—"prize winners." Iams has all his largest and best "business horses" and all his choice "Paris and Belgian" "prize winners" are in his barns. "Iams'" "tops" of "his herd" are always in his barns at the "last end" of the season. "Iams" has thirty-six imported "Paris and European" prize winners. They are Iams' "champion show herd" and the best ten stallions and mares in the United States. "Ikey Buyer"—don't wait to buy a "top notcher" until next year—buy now—save $1,500 and buy a "Paris winner" that you can't always get a chance to buy. One year's time at 8 per cent, bankable note; two years' time at 6 per cent—land security. His "peaches and cream" stallions go at $1,000 and $1,400 (few little higher). mported mares (best in the land) at $800 and $1,000. "Ikey Boy" see Iams now and buy "top notchers" at a little above cost, as all of Iams' horses will positively be sold. Be a "wise guy" buyer and save $1,500—buy a "Paris winner." "It's up to you," Mr. Stallion Buyer, buy a "through ticket" to "Iams' horse town." Walk right in and say "Hello." Iams will meet you with a "$1,000 smile" and treat you like "a prince," and there are "some doin's" there daily. Iams' Big "ton," superb, classy imported stallions and Iams' low-cut prices "show and business" stallions and mare are the "big talk" of "stallion buyers" and Iams' Paris "prize winners," make all buyers "sit up and take notice" and can't be driven away until they own one of "Iams'" "top notchers" at his "bargain-counter" prices. Iams and the "pink lady saleslady" will not let any buyer with money or good notes get away. "Ikey" "come on along." Buy imported horses today. Don't wait, as all Iams' top notchers must be sold in the next thirty days. They are "big snaps." That is why Iams and the "pink lady saleslady" are reducing prices on "show and business" stallions and big mares. He made a "killing" buying these "top notchers" and to close out and have new faces he has determined to sell and give buyers the benefit of his "good buy" in 1912. "Ikey Horseman," Iams' six financial letters of recommendation from six of the best banks in Nebraska (shown in his 1913 catalog) tell you why you should buy imported stallions and mares of Iams. His thirty-one years of successful business, his "$500,000" behind his guarantee—the fact that he is a "live wire" business man ad expert horseman—in a "class by himself." He makes all competitors "stutter" and "get their hammers" out for Iams. But every "knock" is a "boost" for Iams, as when stallion buyers visit "Iams' Horse Emporium" they find Iams has the horses as represented and that Iams "makes good" and his "old customers" are his best "whole-page advertisers." "Ikey," "get busy" quick, buy show horses of Iams at "reduced prices" and "wear diamonds." Iams is sure taking "the curl" out of "high prices" on the best bunch of real "top notchers" ever offered for sale in the United States—all "show horses" and at some price and "some less" than for ordinary stallions. He is making buyers "go fast" to get his "big bargains" and his buyers will be on "Easy Street" if they buy stallions and mares now of Iams, at closing-out prices. Iams' cherries are ripe "for the picking."



Holstein bull, Pontiac Hengerveld Parthenea, sire of the world's champion four-year-old cow. Particulars regarding this great sire, which is owned by T. H. Russell, Geneva, Ohio, are given in our field note column.

Don't say that you're too far away
To come to Geneva on the 1st of May.
Stop the planter, lay off a day
And buy a Holstein da-i-ray.

HOLSTEINS

May 1st and 2d is the date,
Geneva is the station;
Russell's herd is the one on sale,
The best in all creation.

Tell me not in idle jingle,
Russell's sale is but a dream;
For the crowds with whom you mingle
Are very fond of Holstein cream.

Write for Catalog, Mentioning The Homestead.

THE LIVE STOCK MARKET

Union Stock Yards, Chicago, April 12th.—Conditions in the live stock trade have changed somewhat radically this week and at the close there appears need for a period of very conservative marketing of cattle that is not likely to materialize at this juncture. Receipts of cattle at Chicago for the week total 50,500 head, the largest run since last January and 17,000 more than the week previous, while six western markets have had 115,000 or 18,000 more than last week. The increase in supply has consisted largely of low-grade and short-fed steers and it is on such classes that killers have trained their guns with greater effect in lowering prices. Too many half-fat, common steers have been dumped into the market hopper and a process of price readjustment has been going on, a stagnant feeder market assisting killers in this program. Steers selling below $8.25 are closing largely twenty-five cents lower than a week ago, and there has been quite a showing of $7.65 to $8.15 stuff in the crop, while killers bought several strings of light, cold bloods down to $7.15 to $7.50. Good, handy and medium-weight bullocks selling from $8.40 to $8.65 are hardly more than ten to fifteen cents lower for the week, and choice-finished beeves from yearlings up are fairly steady, but yearling stuff not in condition has been subject to the usual handicap and big 1,400 to 1,600-pound steers have not done a very creditable performance, a lot of such weights that had been fed with expectancy of topping the market have had to take $8.75 to $8.85. A lot of very good to choice 1,150 to 1,350-pound bullocks have sold up to $8.60 to $9.00 and have had the call, while the week's market toppers at $9.20 were ripe, 1,370 to 1,408-pound beeves.
